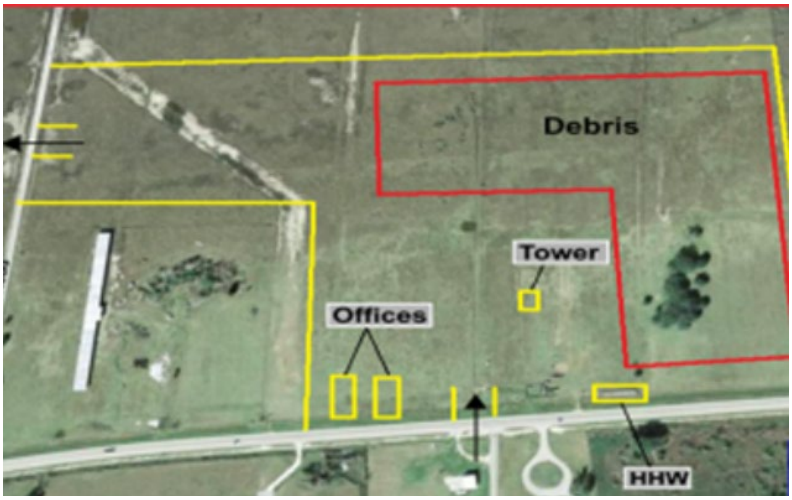
Identifying Equipment Staging Areas

Determining equipment staging areas ahead of time allows DRC to seamlessly mobilize resources in advance of a disaster, whenever possible. In all cases, it saves time in the response. While discussing potential plots to stage equipment, the following should be considered:

- Staging away from residential areas
- Easy access from main rights-of-way
- Sufficient acreage to manage a large number of vehicles
- Fencing around the facility is preferable



DDMS Site Selection

DRC will discuss potential DDMS sites with the City of Destin during the planning phase. Important criteria will include the following:

- Public versus private land considerations
- Environmental agency approvals
- Dust and fire mitigation
- Ingress and egress considerations
- Security features
- Storm water control considerations
- Elevation
- Sound buffers and fencing

Identifying Permanent Disposal, Transfer, and Recycling Facilities

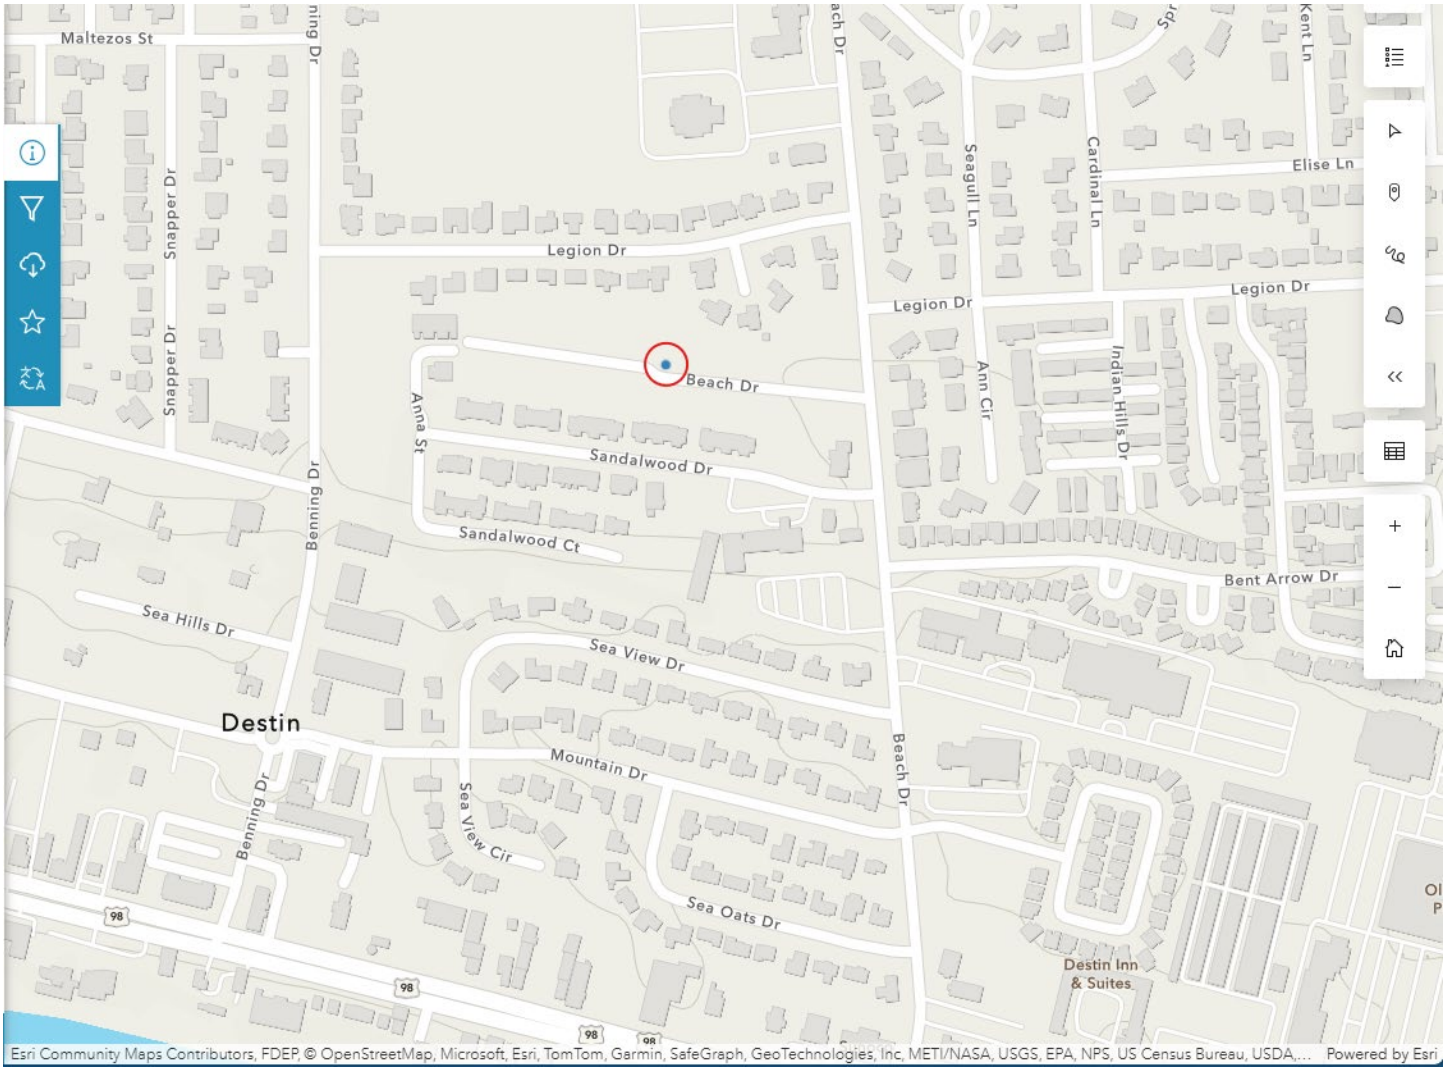
DRC has agreements in place with most major disposal and recycling facilities in the area. DRC's management will be responsible for working with the jurisdiction to identify these facilities and to secure favorable terms and conditions with each facility. Additionally, DRC's staff includes Steve Crawford, an expert in recycling, resource recovery, and disposal. With 25 years of experience, Crawford brings expertise and exceptional knowledge to every project.

Establishing Emergency Push Routes & Collection Grids

Creating a plan to map emergency push routes and collection grids before disaster strikes will save time in the days afterward. Exact routes will vary based on which areas sustain the most damage, but they should always include the following:

- Hospitals
- Police departments
- Emergency shelters
- Nursing homes
- Major traffic routes

Local DDMS Location



City of Destin Hurricane Debris Staging Area
Clinger Cove DMS
180 Clinger Cove Rd
Ocoee, FL 34761

RESPOND

- → Alert Phase
- → Mobilization Timeframes
- → Preliminary Damage Assessments
- → Emergency Push Operations
- → Loading and Hauling Operations
- → Disaster Debris Management Site Operations
- → Compliance
- → Safety
- → Prompt Damage Resolution
- → Documentation and Data Management
- → Communication and In-Field Technology
- → Client Interaction Program
- → Post Event Evaluations
- → Sustainability

Alert Phase

If a potential disaster can be predicted, DRC will activate the following alert phases:

- 72 hours before impending impact, Clint Pate will contact the City of Destin to discuss activation and response
- At the discretion of the City, DRC will mobilize personnel within 24 hours prior to disaster impact to arrive at the Emergency Operations Center
- DRC will identify and assess the readiness of our network of subcontractors for Emergency Push and Load and Haul Operations
- Our team will pre-stage equipment and personnel as needed to respond to the immediate aftermath of the event
- DRC will map Emergency Push Collection routes, if these have not been determined in the planning phase

Mobilization Timeframes

Upon receipt of Notice to Proceed or Task Order, DRC will immediately commence mobilization of equipment, operators, and laborers.

DRC has the capacity to meet, sustain, and manage all facets of disaster response, including **responding within 24 hours.** DRC proposes the following time frames for immediate disaster response:

Within 24 Hours After Notice to Proceed

- Project Manager and support staff are in place and interacting with the City of Destin's Point of Contact
- Staging and certification of equipment is underway
- Permitting and mobilization of DDMS sites has begun
- Emergency Push activities are well underway, in coordination with utility providers
- Initial Damage Assessment is complete
- Public Service Announcements are initiated
- Logistical Support requirements have been assessed
- Initial Safety Meeting takes place
- Time and location of daily productivity meetings is established

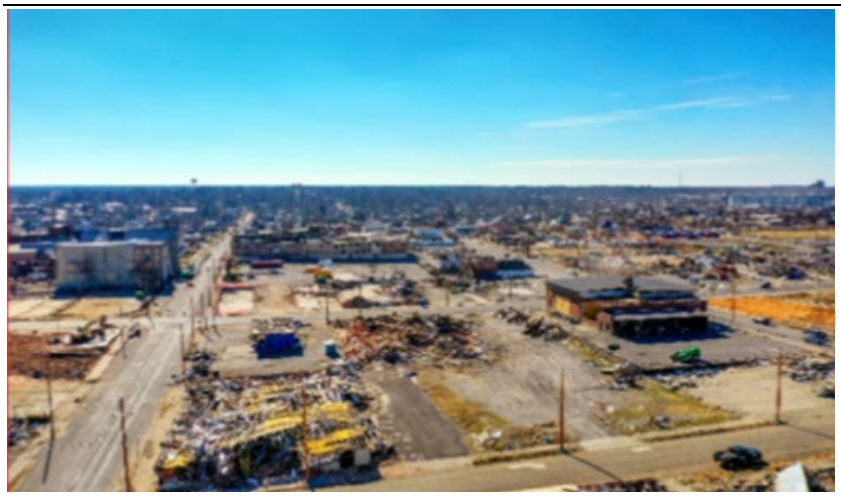
Within 48 Hours After Notice to Proceed

- Initial understanding of crew type and quantity has been established with the City's Point of Contact
- Roughly 50 percent of required equipment and manpower are in place
- At least one DDMS is operational, so that load and haul activities can begin
- DRC has initiated discussions with final disposal and recycling/composting providers (if applicable)
- Mapping of Collection Zones has been finalized in consultation with the City's Point of Contact
- Truck certifying continues
- Daily productivity meetings continue between DRC, the City's Point of Contact, and the Monitoring Firm assigned to the project
- Daily Safety Meetings continue

Within 96 Hours After Notice to Proceed

- Full Mobilization is complete
- Emergency Push complete (if applicable)
- All contractual requirements (bonds, safety plans, dust control, community outreach, etc.) are submitted
- Productivity assessments are made based upon existing travel times and DDMS requirements adjusted
- Equipment and personnel needs are reassessed
- Additional local and equal opportunity vendor outreach has begun and those applicants vetted
- Daily productivity meetings continue between DRC, the City's Point of Contact, and the Monitoring Firm assigned to the project
- Daily Safety Meetings continue

Preliminary Damage Assessments



Within 24 hours of an incident, DRC and local, state, and federal officials will have completed preliminary damage assessments to indicate the scope of losses and recovery needs. Through the debris assessment, DRC will accomplish the following:

- Estimate the quantity and mix of debris
- Estimate damage costs
- Determine impact on critical facilities
- Identify impact on residential and commercial areas

Emergency Road Clearance/Push Operations

In an emergency push operation, debris is "pushed" or cleared from the public roadways in an order of priority established by the City of Destin. DRC's goal in a push operation is to make roadways and intersections as safe as possible by increasing visibility and minimizing traffic obstructions. Push routes are predetermined with the help of City personnel, who have a clear understanding of the geography of the community.

Push crews consist of four to five personnel with supervision, chainsaws, and equipment capable of moving heavy material, such as skid steers, front end loaders, etc. This phase of work is usually accomplished within one to five days after the event, depending on the scale of the disaster. For safety reasons, debris is collected only during daylight hours.

Loading and Hauling Operations

Certification of Equipment

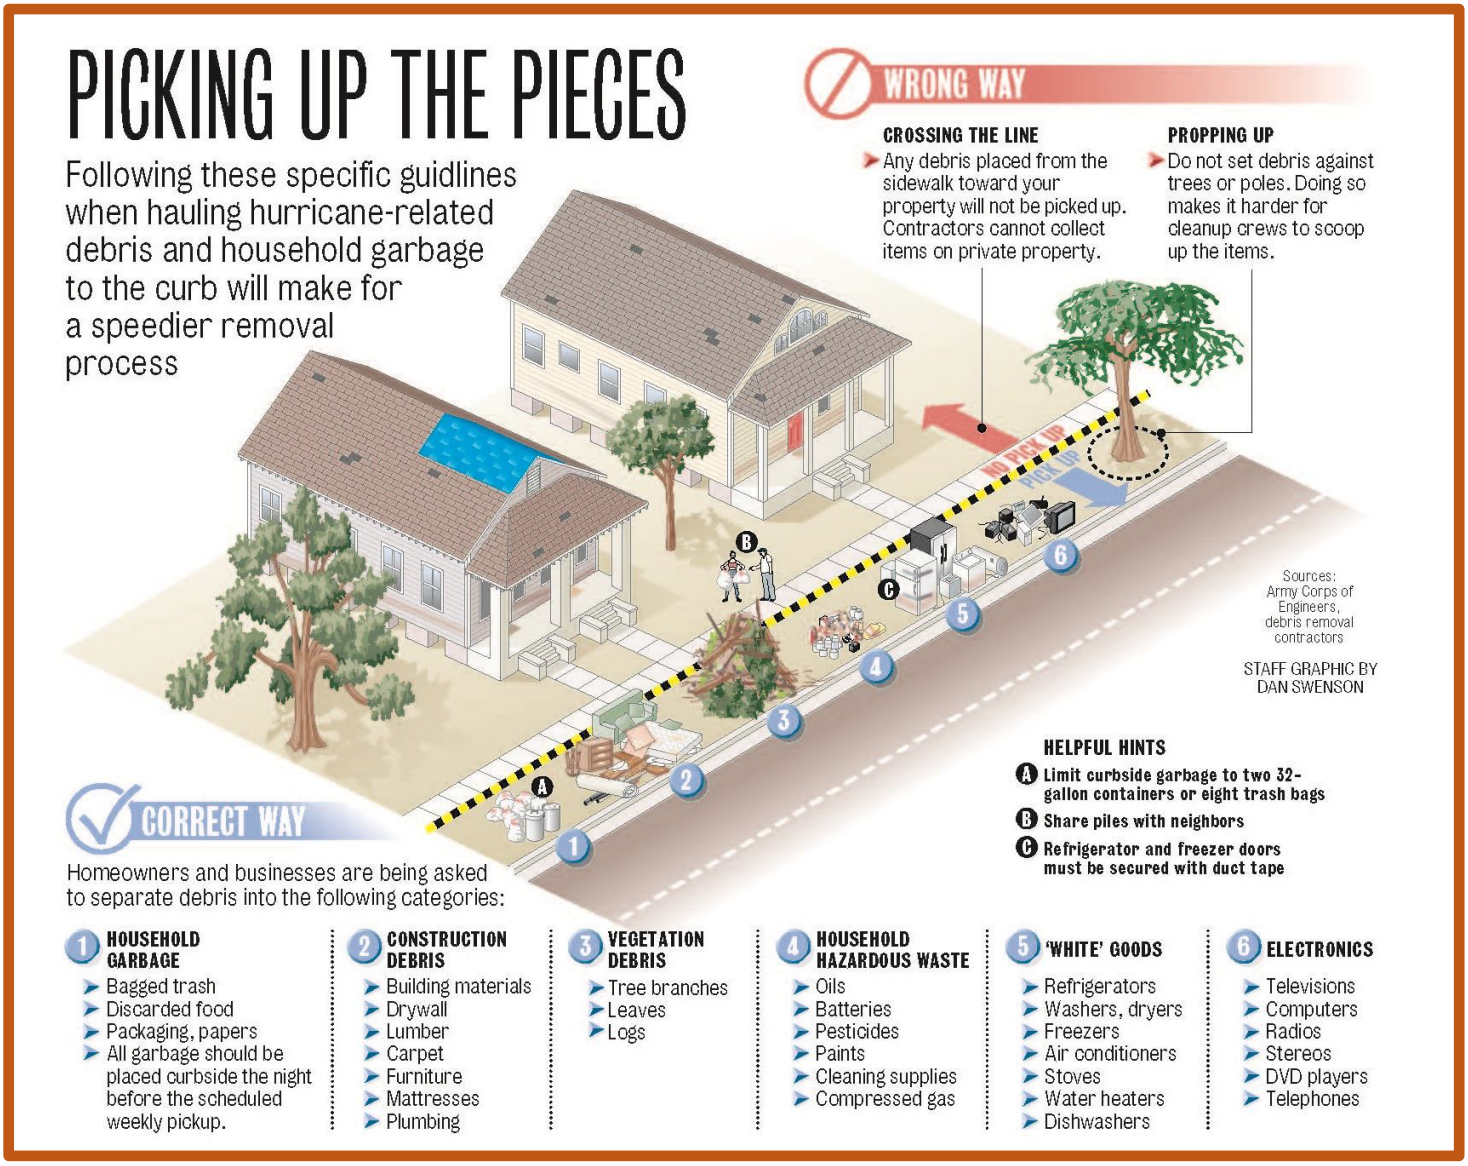
DRC will begin the certification of equipment as soon as possible, generally within 12 to 24 hours after a Notice to Proceed is issued. Trucks will be staged at a location where the City's third-party monitoring firm can measure load capacity and assign unique identification to each piece of loading and hauling equipment.

Public Relations

In the midst of chaos brought on by a disaster, clear communication about the recovery process helps to restore a sense of safety to communities. Providing the public with guidance regarding the material collection and separation process will also significantly enhance the efficiency of the operation.

To ensure effective communication with the public about debris collection operations and timelines, DRC will coordinate with the City on creating a communications plan, including disseminating Public Service Announcements (PSAs) and flyers. These PSAs and flyers will be shared on various platforms including City websites, local radio and television news outlets, and social media channels. Please see the example flyer below that defines and illustrates material separation for residents:

St. Charles Parish President Matthew Jewell meets with Louisiana Gov. John Bel Edwards and state delegates to discuss the impact of the tornado in Killona and Montz in 2022.



Multiple Scheduled Passes

In order to allow citizens to return to their properties and bring debris to the right-of-way as recovery progresses, DRC adheres to FEMA's guideline of three scheduled collections or passes. In rare cases, particularly following major flooding, additional collections may be warranted.

This illustration depicts a typical post-disaster scenario that involves construction and demolition debris (C&D). In this case, the public has been advised through PSAs and a flyer such as the above to place disaster generated debris in the right-of-way (ROW) in separate piles organized by debris type for separate collections.

Field Operations

Within 24 to 48 hours of a Notice to Proceed (or a reasonable amount of time agreed upon by the City), DRC will commence debris removal operations with multiple Debris Removal Crews. Debris Removal Crews will generally consist of three to five hauling vehicles of 30 to 150 cubic yard capacity with operators, one front end loader with operator, one foreman, and three laborers/flagmen (when required by traffic conditions). In other instances where conditions allow, self-loading equipment of similar capacity will be utilized to maximize efficiency.

All debris removal operators will be given area maps designating assignment/authorized areas or zones of operation as well as transport routes designated and/or approved by the City. Field supervisors shall ensure that all debris removal operators are licensed and certified to operate the required equipment. As crews complete zones, the areas will be jointly surveyed by DRC and the City of Destin and closed out.

Clean As You Go Policy

DRC will implement a "clean as you go" policy to ensure all debris is cleared from the loading site before moving to the next loading site.

All debris collection will be performed under the direction of a qualified supervisor. Prior to collection operations, the supervisor will survey the area to assess whether any potential hazards are present. The supervisor will direct the work crew to appropriately mitigate any hazards to ensure the protection of property and infrastructure during the loading and hauling operation.

All electrical lines and equipment will be considered energized. Logs, brush, and other debris shall be securely loaded onto trucks in such a manner as not to obscure tail lights, brake lights, or vision, or to overhang the side. Ensuring that every load is trimmed and fully contained within the body of the hauling unit nearly eliminates the possibility of overhanging debris that could cause a power line break and create an electrical hazard.

Public and Private Property Debris Removal

DRC's Debris Removal Crews will remove all eligible debris from the right-of-way and haul it to a designated Disaster Debris Management Site and/or directly to a final disposal site. At the request of the City of Destin, DRC will also demolish structures and/or remove debris from public easements, improved public property, and public properties other than rights-of-way.

Eligible debris is that which has been generated directly by the event or as a result of the event. For debris on private property to be eligible, Private Property Debris Removal must be authorized.

FEMA may extend public assistance to include private property debris removal when it poses a threat to the public. Under the request and direction of the City of Destin or its representative, DRC will initiate and manage a Right of Entry (ROE) program to remove debris on private property and/or demolish private structures that are a public safety hazard. The property owner must grant access prior to any work, unless there is an immediate threat to the lives, health, and safety of the City's residents.

Vegetative Debris

Vegetative debris is defined as tree branches, leaves, logs, timber, and stumps.

DRC's crews can collect vegetative debris using a wide spectrum of equipment. To increase efficiency, DRC will often combine the removal of hazardous trees, including "leaners" (leaning trees) and "hangers" (hanging limbs), with the collection of other vegetative debris.

Once collected, vegetative debris will be transported to a Disaster Debris Management Site for processing. There are two main ways of reducing vegetative debris to conserve valuable landfill space:

- Reduction by **grinding** creates mulch, a valuable resource which can be used in landscaping, by farms as compost, or distributed to households for use in gardens; or it can be burned as a fuel source
- Reduction by **burning** provides for the most cost-effective processing, in areas where burning is an option

Hazardous Tree and Limb Removal

A tree is considered hazardous if its condition was caused by the disaster and it poses a risk to public health and safety. If possible, leaner and hanger removal will be performed in advance of load and haul activity so that these trees and limbs can be collected simultaneously with ROW debris. Crews may include climbers with chainsaws, as well as bucket trucks, automated saw trucks, and excavators.

FEMA uses the following criteria to define whether a leaner or hanger is hazardous. These criteria will be used by the City of Destin's independent monitoring firm to determine the eligibility of each tree to be removed:

- The tree trunk must be six inches in diameter or greater when measured at chest height
- More than 50% of the crown is damaged or destroyed
- The trunk is split or branches broken, exposing the heartwood
- The tree has fallen or been uprooted within a public use area
- The trunk is leaning at an angle greater than 30 degrees
- Hanging limbs must be at least 2 inches in diameter and pose a threat of falling into an improved public area or right-of-way

Removal of Hazardous Stumps

Stump removal usually takes place late in the debris removal process. The City's monitor will generally determine the eligibility of stumps for removal. A stump may be determined to be hazardous and eligible for Public Assistance grant funding as a per-unit cost for stump removal if it meets all the following criteria:

- 50% or more of the root ball is exposed (if less than 50% of the root ball is exposed, it may be flush cut)
- The stump's diameter is greater than 24 inches, as measured 24 inches above the ground
- The stump is located on improved public property or a public right-of-way
- The stump poses an immediate threat to life, public health and safety

Crews will use excavators to extract larger stumps, then load them onto flatbed trailers for transport to the DDMS or final disposal facility, where they will be ground into mulch. Most often, large stumps must be split prior to grinding, whereas smaller stumps can be ground directly. After removing larger stumps, DRC will fill the hole to ground level.

- DRC removed more than **6,200,000 cubic yards of vegetative debris** across Florida, Georgia, South Carolina, and Virginia in response to Hurricane Helene in 2024. This included **125,000 hazardous trees.**
- Following Hurricane Ida in 2021, DRC collected and disposed of **approximately 13,000,000 cubic yards** of vegetative debris.
- While working on the recovery in Florida Department of Transportation Regions 2 and 3 after Hurricane Michael, DRC collected more than **2,660,000 cubic yards** of vegetative debris, including **17,169 hazardous trees**.
- During the same storm in Jackson County, Florida, DRC collected more than **2,445,000 cubic yards** of vegetative debris, including **32,290 hazardous trees**.
- While working on the recovery in Puerto Rico after the effects of Hurricane Maria, DRC collected **96,835 hazardous trees** from the island as a part of a **$78 million contract**.
- For the City of Fort Lauderdale in response to Hurricane Irma in 2017, DRC removed more than **12,500 hazardous stumps and trees**.
- In response to Ice Storm Pax in 2014, The South Carolina Department of Transportation contracted DRC to cut, remove and transport vegetative debris in eight counties, totaling more than **12,000 miles of roadway clearing** and the trimming of more than **225,000 trees**.

Construction and Demolition (C&D) Debris

Construction and Demolition (C&D) Debris consists of building materials, drywall, lumber, carpet, furniture, mattresses, and plumbing. C&D Debris is produced most often by floods, tidal surge, and earthquakes.

When collecting C&D Debris, DRC carefully considers local and state restrictions on landfill material acceptance. Using a DDMS provides an opportunity for reduction by material separation and compaction. Additionally, some building materials may be salvageable for reuse, if local facilities are in place. Transportation directly to the final disposal site does not allow for reduction; however, in some cases it may be more efficient.

A wide variety of equipment can be used to collect C&D Debris, including self-loaders.

- Following Hurricane Ida in 2021, DRC collected and disposed of over **4,500,000 cubic yards** of C&D debris.
- In the States of North Carolina and Florida during Hurricanes Michael and Florence—which occurred simultaneously—DRC removed approximately **635,000 cubic yards of C&D**.
- DRC's response to severe flooding in the City-Parish of East Baton Rouge, Louisiana, in 2016 required the use of more than 300 hauling vehicles in the collection, processing, and/or recycling of over **1.2 million cubic yards of C&D debris.**

White Goods

"White goods" are appliances, including refrigerators, washers, dryers, freezers, air conditioners, stoves, water heaters, and dishwashers.

DRC will collect white goods separately, often using light duty trucks and trailers with a liftgate. We will then transport them to a designated area at a DDMS or directly to a recycler. Any profits from recycling will be returned to the City unless otherwise stipulated in the contract.

The public will have been informed by DRC's public relations campaign to remove all contents from refrigerators and freezers prior to collection or to duct tape the doors shut to facilitate safety and ease of collection. Refrigerators and freezers collected with contents shall be staged for content removal and disposal. Freon shall be removed by a certified technician under the guidance of EPA regulations.

- In response to Hurricane Ian in 2022, DRC removed and recycled/disposed of **3,628 appliances** in South Florida. This work included the removal of **892 appliances from waterways**.
- After Hurricane Harvey in 2017, DRC removed and recycled/disposed of **4,227 appliances** in the Houston area.
- The Baton Rouge area experienced historic flooding in 2016. DRC removed and recycled/disposed of **more than 10,000 appliances** as part of a **$45 million contract**.

Household Hazardous Waste

Household Hazardous Waste (HHW) consists of oils, batteries, pesticides, paint, cleaning supplies, and compressed gas.

HHW is collected separately from other types of debris and securely placed in spill-proof containers for transportation to staging at a DDMS or direct transport to a qualified recycler or disposal facility. When stored at a DDMS, the area is generally protected with lining or berms, or both, depending upon the requirements of the state environmental agency. When materials are recycled, the recycler will often collect the items from the DDMS, pack them appropriately, and transport them to the recycling facility.

- DRC has removed approximately **267,000 pounds of household hazardous waste** for the State of New Mexico in response to the South Fork and Salt Fires in 2024.
- In our response to Hurricane Ian in South Florida in 2022, DRC removed and disposed of **698,889 cubic yards of household hazardous waste**.
- In Pender County, North Carolina, after Hurricane Florence in 2018, DRC collected **28,130 pounds of household hazardous waste** as a part of a **$10 million contract**.

- DRC removed and disposed of **55,486 cubic yards of household hazardous waste** in the Houston area following Hurricane Harvey in 2017.
- After the severe flooding of the City-Parish of East Baton Rouge, Louisiana in 2016, DRC removed and disposed of **554,880 cubic yards of household hazardous waste**.

Electronic Waste Collection (E-Waste)

E-Waste debris includes televisions, computers, radios, stereos, DVD players, telephones, etc.

DRC will make one or two separate passes to collect e-waste, depending on the severity of the disaster. General laborers, along with a supervisor, will collect the items using light duty trucks and trailers, then transport them either to a specific area of the DDMS or directly to a recycler.

- DRC removed **8,715 pounds of e-waste** in Boulder County, Colorado following the Marshall Fires.
- After Hurricane Florence, DRC removed **2,786 e-waste units** in Pender County alone; the total number of units DRC collected in response to Hurricane Florence was **3,116**.
- After Hurricane Harvey, DRC removed **9,268 e-waste units** in the Houston area.
- DRC removed **18,908 e-waste units** in response to the 2016 Baton Rouge floods.

Tires

Following flood events or tidal surge, debris removal crews often find tires in debris piles on the public ROW. Tires create a special problem for landfill operators, as they tend to rise or float and can ultimately damage the landfill cap. Therefore, DRC's debris removal crews will separate tires from other debris. Tires can be easily collected using light duty equipment. Ideally, we will transport them directly to the recycler or shredder. Federal and state regulations often require a waste hauler permit to transport tires.

Canal/Waterway Debris Removal

Canal debris removal is most often performed under the oversight of state environmental regulators, especially in environmentally sensitive areas. Environmental factors always take priority when developing an operations plan. Debris removal may be land-based or water-based. Collection methods vary widely due to physical dynamics, environmental considerations, regulations, and scope of work.

Targets can be identified by side-scan sonar or below surface observation. Target removal may span from the water bottom to surface debris, or it may be limited to designated depths.

When appropriate, debris can be collected with grapples mounted on barges of varying sizes or even small boats. Land-based operations consist of removal of targets with long reach excavators equipped with a spoils or dredge bucket.

Temporary Offloading Sites can be used to stage debris prior to transport to a DDMS for processing or to final disposal. When abundant access points exist, loading can occur directly into trucks for transport to processing or disposal.

- DRC is currently contracted by the City of Houston for a multi-phase waterway debris removal project and has removed **1.5 million cubic yards** of debris from Houston waterways to date.
- In response to Hurricane Ida in 2021, DRC collected and disposed of over **428,000 cubic yards** of debris from canals and waterways across 5 jurisdictions.

Vehicle and Vessel Removal

DRC has extensive experience performing large scale vehicle and vessel removal and recovery projects. A single project for the State of Louisiana following Hurricanes Katrina and Rita involved the recovery and management of thousands of vehicles and vessels.

Operating procedures for vehicle and vessel removal projects vary from state to state due to legal requirements. The scope of work is always developed in consultation with the jurisdiction.

To begin a vehicle and/or vessel removal project, DRC will activate one or more aggregation sites for storage, processing, recordation, and access. Arranging the vehicles in a grid pattern allows for easiest access.

For a land-based recovery, DRC will tag and record vehicles and vessels prior to removal. For a water-based recovery, we will locate and record the vessels prior to removal.

At the aggregation site(s), DRC or a properly trained and licensed subcontractor will remove fluids from the vehicles and vessels. DRC will send an initial notification to the vehicle's owner, as determined by VIN information gathered in the field using the State Police database, according to local and state regulations. Additional notifications may be sent using certified mail, if required by law. DRC will also allow private insurance companies to access the vehicles for viewing.

Salvaged vessels and vehicles may be retrieved by either owners or insurance companies. Those that are not retrieved after ample notification will be crushed and recycled. Any proceeds from recycling will be returned to the City unless otherwise stipulated in the contract.

- During our ongoing response to the South Fork and Salt Fires, **DRC has removed 105 burned vehicles** on behalf of the State of New Mexico.
- DRC's recent experience in the removal of sunken vessels includes the Louisiana Parishes of Jefferson, Terrebonne, and East Baton Rouge. In the City-Parish of East Baton Rouge, our annual channel clearing project for 2022 totaled **$11,029,963**.
- DRC **removed 80 burned vehicles** following the Marshall Fires in Boulder County, Colorado.
- After Hurricane Ike struck Texas in 2009, DRC removed sunken vessels and debris from four major bays and waterways in the affected area. We used side scan sonar to identify targets in advance and in combination with a well-designed implementation plan. **DRC removed a total of 2,100,000 cubic yards of vessels and debris**, and the complete marine operation was concluded **in just over 30 days**.

Sand Screening, Soil Recovery, and Beach Restoration

DRC's innovative methods for the handling and screening of sand have allowed many jurisdictions to bring back their beaches, better—even after powerful storm surges from record-breaking events including Hurricanes Helene, Milton, Ida, Florence, Irma, and Ike.

After disaster strikes, many jurisdictions are faced with large quantities of sand that have washed up on the roadways, as well as on public and private property. DRC will collect the sand and move it to a nearby Disaster Debris Management Site for processing. Sand that remains on the beach often contains large quantities of debris. We will process this sand directly on the beach before restoring the sand removed and processed from other areas.

DRC uses a variety of equipment in sand and soil processing, including the following:

- **Skid steers and front-end loaders** to recover displaced material from adjacent properties
- **Beach rakes** to remove hidden and surface debris from beachfronts
- **Shaker screens and trammels** to screen sand and soils

DRC's teams are able to process 100 to 200 cubic yards of sand per hour. After screening, the clean material is returned to its original location. Beach contours and dunes can then be re-created. The debris that has been removed will be taken to a DDMS for reduction and haul-out to final disposal.

➢In Jefferson Parish, Louisiana, after Hurricane Ida in 2021, DRC recovered, screened, and restored **92,432 cubic yards of sand**. Additionally, DRC segregated and disposed of **36,500 cubic yards of silt and soil**.

➢For the City of Fort Lauderdale following Hurricane Irma in 2017, DRC recovered more than **57,500 cubic yards** of sand from roadways, sidewalks, and parking lots. We then screened the sand and restored the beauty of these Florida beaches.

➢In response to Hurricane Florence in 2018, DRC removed and screened **38,336 cubic yards of sand** to restore beaches in North Carolina.

"DRC's Project Manager arrived in Wilmington the day before the event, so he was in place to immediately assess damage and start the process to order the manpower and equipment needed to start the cleanup effort. He was here before a notice to proceed was sent."

— David Bundick, Superintendent of Solid Waste, City of Wilmington

Expertise in the Removal of Dead Animals

Improper disposal of animal carcasses can contaminate drinking water sources or spread disease. It is DRC's policy to handle and dispose of animal remains with care and in accordance with all state and local regulations. All carcasses should be disposed of as soon as possible. There are several approved methods for the disposal of animal carcasses:

- **Incineration** at a secure and pre-approved site.
- **Deposition** in a contained landfill approved for remains disposal.
- **Composting**, with approval, is a sanitary and practical method of carcass disposal.

- DRC led the Red Tide Fish Kill cleanup project in Pinellas County in 2018, collecting over **1,800 tons of dead fish** in a three-month span while also cleaning and maintaining **45 miles of coastline**. The **total contract amount was $6,895,562**.
- After the severe flooding in the Baton Rouge area in 2016, DRC removed and disposed of dead animals as needed as part of a **$45,000,000 contract** with the City.
- For the City of Galveston following Hurricane Ike in 2008, DRC removed and disposed of dead animals as needed as part of a **$38,007,492 contract** with the City.

Protection of Archaeological Sites and Human Remains

If in the process of debris removal DRC discovers evidence of a possible archaeological site, we will immediately cease work and contact FEMA. A qualified monitor may be required. If human remains are found, DRC will contact local authorities.

Private Property Debris Removal and Demolition

DRC has extensive experience in removing all kinds of debris from private property after every type of disaster. Upon the request of the City of Destin, DRC will remove debris from private properties as directed. Depending on the severity of the event, and with proper documentation in place, FEMA reimbursement may be available.

The FEMA Private Property Debris Removal Program plays a crucial role in facilitating the cleanup and recovery process for individuals and families affected by natural disasters. Here's a breakdown of key aspects of the program:

Eligibility Criteria: The program is designed to assist property owners whose residences or businesses have been damaged or destroyed by a federally declared disaster, providing financial assistance for the removal of debris from their private properties.

Types of Debris Covered: Eligible debris includes vegetative debris and construction and demolition materials resulting directly from the disaster event, such as fallen trees, damaged structures, and household belongings.

Documentation Requirements: Property owners must submit thorough documentation, including photographs, damage assessments, and estimates for debris removal costs, to support their eligibility for assistance under the program.

Environmental Considerations: Debris removal activities must adhere to environmental regulations and guidelines to minimize ecological impact and ensure safe disposal of hazardous materials, such as asbestos or household chemicals.

Reimbursement Process: Upon completion of debris removal operations, property owners or their contractors submit documentation of incurred expenses to FEMA for reimbursement, subject to verification and approval.

Community Outreach and Education: FEMA conducts outreach and education initiatives to inform property owners about the program, eligibility requirements, and available resources to facilitate their participation and ensure equitable access to assistance.

The FEMA Private Property Debris Removal Program serves as a vital resource for individuals and communities navigating the challenges of post-disaster recovery, offering financial support and logistical assistance to expedite the cleanup process and facilitate the rebuilding of homes and businesses.

Policy Update

Pre-approval from FEMA is not required for the Applicant to begin PPDR work (including on privately owned residential and commercial property); however, for the Applicant to receive PA funding, FEMA must determine that the work is eligible. The Applicant must notify FEMA that PPDR is being conducted and the type of property on which the PPDR is being conducted (e.g., privately-owned residential or commercial property) so FEMA can ensure notifications to the necessary FEMA components and federal partners.

- **FEMA Memorandum, dated October 17, 2022**

FEMA Reimbursement

For more information about how DRC provides assistance with FEMA reimbursement, please see Tab 3, item 3.

Experience in Private Property Debris Removal and Demolition

For decades, DRC has provided structural and strategic demolition services on both public and private property in a safe, environmentally responsible manner. DRC's number one priority is to eliminate the immediate threat to public health and safety that damaged and abandoned structures may cause. DRC works closely with federal, state, and local entities to ensure compliance with environmental guidelines.

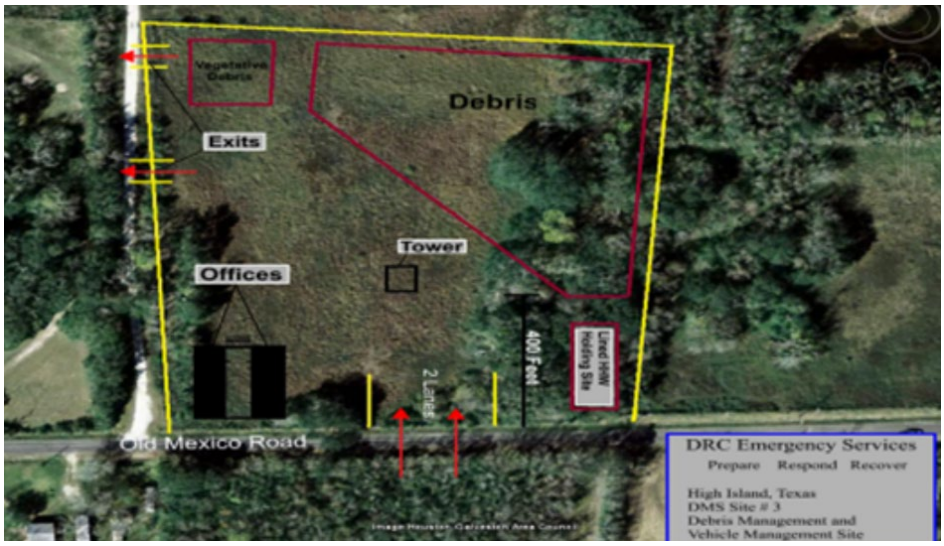
Demolition is an integral part of any community's recovery from a major disaster, and DRC has a long and wide-ranging history of successfully managing numerous Right-of-Entry Programs in accordance with FEMA guidelines. Since its inception, DRC has performed private property debris removal and demolitions following wildfires in California, Colorado, Hawaii, New Mexico, and Washington State; tornadoes in Alabama and Kentucky (as the ACI contractor for the United States Army Corps of Engineers for Region 3); as well as Hurricanes Katrina, Gustav, Michael, Laura, Ida, and Ian.

DRC has performed 11,782 strategic demolitions for the City of New Orleans to stimulate economic recovery. DRC has also demolished thousands of blighted properties in Washington, Jefferson, and Terrebonne Parishes and the City of Lake

Charles, Louisiana following multiple hurricanes. The FEMA demolition, Selective Salvage demolition and Strategic Demolition projects, which have been in effect since 2007, are responsible for the elimination of more than 2,000 blighted properties.

Disaster Debris Management Site Operations

Permitting and Site Mobilization



Within 24 hours of notice to proceed, DRC will begin mobilization to pre-established DDMS locations. DRC will determine the number of DDMS sites based on estimated volumes, travel times, traffic patterns, and materials to be processed. Once operational, a DDMS should facilitate a minimum of five loads per truck per day.

If applicable, DRC will promptly execute Land Use Agreements with any private landowners. For any sites not already permitted, Kristy Fuentes, DRC's Vice President of Administration and Compliance, will submit a permitting request.

Prior to use, DRC will perform an environmental audit of each site. This audit will involve documenting the site using historical records and data; taking photos and video, possibly using drones; and taking soil samples. Depending on state regulations, other steps may be required, such as creating a Stormwater Pollution Prevention Plan (SWPPP), perimeter silt fencing, or air monitoring.

Site Setup and Maintenance

Access and traffic flow –DRC will establish separate points of ingress and egress to improve traffic flow and operational efficiency. Truck routes will be mapped to avoid driving through residential areas.

Traffic Control - Traffic control personnel, with appropriate traffic control safety equipment, will be stationed at the ingress observation tower to maintain vehicular traffic control. Additional traffic control personnel can be stationed throughout the site, as needed, to enforce proper traffic flow.

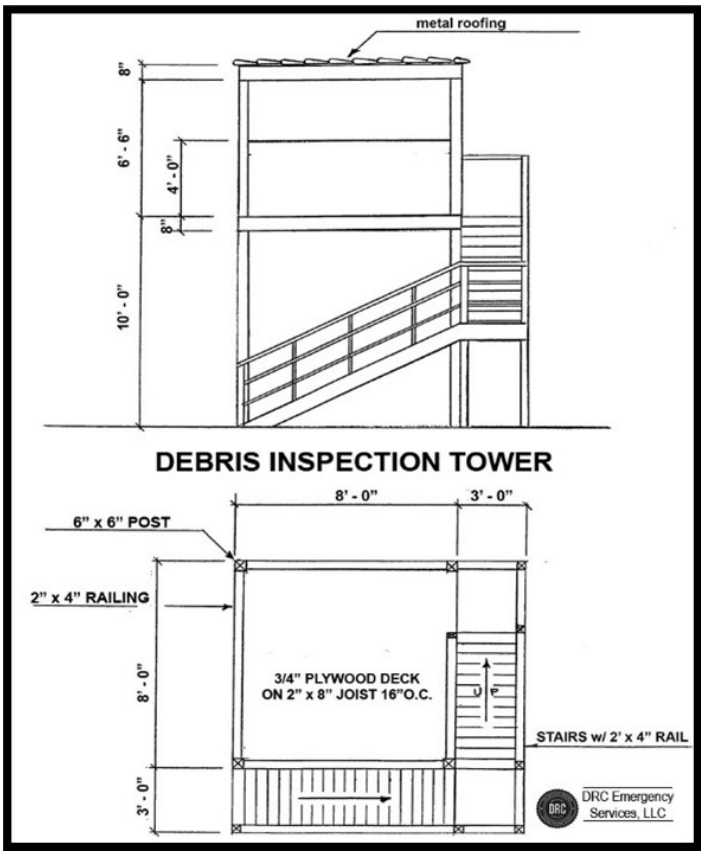
Inspection Towers – DRC will construct inspection towers to facilitate observation and measurement of debris hauled for storage at debris staging sites. If volume warrants it, each Disaster Debris Management Site will contain two inspection towers: one tower at the point of ingress for use by the monitoring firm, and one tower at the point of egress to ensure all debris hauling trucks are in fact empty upon leaving the site. A single tower may be utilized if ingress and egress points are the same. Sometimes we will use all-terrain man lifts instead of constructed towers.

Maintenance and Grading – DRC will perform maintenance and grading of the debris management site throughout the operating day. Access roads

Typical On-Site Equipment, Supplies, and Manpower Needs

- Signage
- Equipment Operators
- Security Personnel
- Front-End Loader with Thumb
- Grinder – Horizontal or Tub
- Air Curtain or Above Ground Incinerator (if required)
- Inspection Tower(s)
- Site Manager
- Traffic Control Devices
- Bulldozer
- Excavator
- Sweeper
- Water Truck
- Perimeter Fencing (if required)

will be constantly maintained, and dust control managed by use of a water truck. Access roads will be swept as often as necessary.



Debris Storage Area

Debris is segregated into five main areas:

Vegetative debris – Vegetative debris will be cleaned of C&D debris to the extent possible to facilitate compliance with requirements for reduction of vegetative debris and processing of C&D.

Construction and Demolition (C&D) Debris – C&D debris will be stored separately within an area that will facilitate material separation, compaction or grinding.

Recyclables/Salvage – Recyclable/salvageable materials will be stockpiled in accordance with the site plan.

White goods – White goods will be stockpiled in a contained area in accordance with the site plan, unless they are being transported directly to the recycler.

Household Hazardous Waste (HHW) – HHW will be segregated and stored in an approved containment area protected by lining and/or berms.

Debris Reduction Methods

Grinding and/or Chipping Operations – Grinding or chipping can achieve a 4 to 1 reduction of vegetative debris or greater. The resulting product can be burned for use as fuel or reused as mulch or compost. Grinding or chipping is less often used as a reduction method for C&D material due to its impact on equipment.

Burning – Most common in rural settings, burning is the most efficient reduction method for vegetative debris, as a 95% reduction can be achieved. However, environmental impact and safety must be considered. Air curtain incineration and trench burning mitigate the release of smoke and ash into the air and surrounding areas.

Compaction – Compaction is the best reduction method for construction and demolition debris. When combined with recycling, a 2 to 1 reduction ratio can be achieved.

Final Debris Disposal

For most projects, DRC will work with the City to determine final disposal location(s) for processed debris during the planning phase. Per Subtitle D, lined sites are generally selected. However, in some cases, permitted construction and demolition sites are used, when regulations allow.

Recycling Options

Vegetative Debris – After reduction by grinding or chipping, vegetative debris can serve a multitude of useful purposes. It can serve as a viable fuel source for manufacturing, etc., or used for agricultural purposes. It can be donated to residents for use in flower beds and gardens. It can be used as an alternative daily cover in landfills, when allowed. It can also be used as a roadbed for temporary roads, and it can be thinly spread across acreage to produce dirt.
Aggregates – Concrete, brick, and similar materials can be crushed and used as fill material, road base, etc.
Construction and Demolition Debris – Wood, metals, plastics, and sometimes gypsum can be pulled from the waste stream and recycled, if sufficient quantities exist and recycling facilities are available and accessible.
White Goods – White goods are easy to recycle due to abundant processors.
Electronic Waste (E-Waste) – While electronic waste items are quite abundant, particularly following a flood or tidal surge, recyclers of these items have become more difficult to find. Some of the components found in televisions, computer monitors, copy machines, etc. contain heavy metals, making disposal a poor option. Shipping to foreign markets is sometimes the best option.

"This debris removal project has been a resounding success, and the GLO appreciates the many hours of hard work put in by the DRC team."

— Benjamin K. Au Architect, Director of Construction Services GLO, Texas

Disaster Debris Management Site Closeout

Once operations are complete, DRC will restore all Disaster Debris Management Sites. The scope of restoration is determined by post-use site conditions, terms of the land lease, and/or the City's directive and mutual understanding when public property is used. Restoration will include final removal of all debris and other managed components as well as all structures and temporary features. Additionally, DRC will perform grading and leveling, removal of temporary roads and fencing, and grassing or seeding as necessary to restore the site to documented pre-use condition. In most cases, both the property owner and the state environmental agency must inspect, release, and approve the final closure of a site.

DRC will use drone footage and still photography to illustrate the current condition of the site as it compares to the baseline or pre-use documentation. We will also conduct environmental sampling that mirrors pre-use sampling. For example, random soil samples, surface samples, and, if necessary, water samples, may be taken and sealed in containers for comparison with pre-use samples. Independent third-party engineers and testing labs may be used. Post-use samples and pre-use samples may be tested in an independent lab to determine the presence of contaminants.

QUALITY ASSURANCE AND QUALITY CONTROL

DRC strives to provide the most dependable, honest, and customer-centric service in the industry by upholding the highest standards of ethical conduct and compliance at all times. To better ensure our continued compliance with all laws, rules, and regulations, DRC's senior management has established a formal code of business conduct, to which all contractors and individuals are expected to adhere.

Kristy Fuentes, DRC's Vice President of Compliance and Administration, oversees the Corporate Compliance Program. Her responsibilities include the following:

- Evaluating internal and external compliance issues or concerns relating to DRC's interaction with customers
- Ensuring that our management, employees, and customers are in compliance with all applicable rules and regulations
- Serving as a valuable line of communication between the company and its customers
- Acting as a conduit to the President by monitoring and reporting results of the ethics practices of the company
- Providing guidance to the senior management team

Ms. Fuentes is authorized to implement all necessary actions to insure achievement of the objectives of an effective compliance program.

Application of Core Values

DRC is committed to upholding our core values in all aspects of business and conduct. We expect all personnel to uphold these values in every interaction:

- To our **customers** we place highest priority on our response time to a disaster, our effectiveness, and the quality of our service and solutions.
- To our fellow **employees** we look out for their welfare, safety and health. We promote an environment that encourages new ideas, enjoyment of work, and equal opportunity for advancement.
- To our **suppliers and subcontractors**, we are fair and professional, honoring our commitments to our business partners.

Compliance Standards and Procedures

DRC aspires to be the "**first in response**" for natural and man-made disasters by being prepared, responsive, and competent, and by demonstrating ethical business conduct. Headed by a team of caring people, we recognize that how we do our work is as important as what work we do. We will not tolerate any shortcuts when it comes to our ethical values and standards of conduct.

Quality Control Plan

The purpose of the Quality Control Plan is to promote **efficient and safe operations** in the provision of **quality services**. DRC's approach to quality control consists of a series of tasks and processes tailored to suit the challenging circumstances facing the City of Destin in the wake of a disaster event. A copy of the Quality Control Plan is available for review upon request.

Our mission is to provide the most **dependable**, **honest**, and **customer-centric** services in the industry by building lasting relationships with the clients we serve.

We are among the leading disaster management companies in the United States, specializing in providing emergency preparation, disaster response, and recovery from major catastrophes. Our experience covers all facets of a project, including the FEMA reimbursement process.

At DRC we're always *striking back* against disaster.

Safety

DRC maintains an unwavering commitment to the health and safety of our employees, subcontractors, customers, and the communities that we serve.

Our goal is to ensure that all projects operate under the safest possible conditions and, as such, DRC maintains a robust in-house safety program. Headed by a dedicated team of Project Managers and Regional Managers, DRC's safety programs and practices include:

- Morning project safety toolbox meetings
- Weekly "better ideas for improvement" meetings
- Weekly formal safety meetings
- Constant safety training certifications
- Safety recognition through our "challenge coin" award program

DRC follows all OSHA regulations and other federal and state agency guidelines when conducting an operation. DRC's Corporate Safety Plan includes Safety Policies, an Accident Prevention Plan, and a Substance Abuse Policy. It is the policy of this organization to provide and maintain work environments and procedures which will achieve the following:

- Safeguard the public and government personnel, as well as property, materials, supplies, and equipment
- Provide a safe work environment for employees and subcontractors
- Avoid interruptions to operations and delays involving project completion
- Increase morale
- Reduce costs

DRC's staff includes Sam Dancer, Safety Officer, and Jarod Tassin, Taylor Jumonville, Andy Allshouse, and Scott Matthews, Maintenance of Traffic (MOT) Specialists who bring invaluable skill and expertise to each project. With over 100 FEMA/OSHA certifications, Mr. Dancer oversees training and safety procedures. A copy of DRC's Corporate Safety Plan is available for review upon request.

Employee Performance and Training

As one of the leading disaster response companies in the United States, DRC has developed one of the most comprehensive employee training modules in the industry. Every staff member is continuously trained in the following:

- Online FEMA doctrine
- Safety performance and practice
- Certifications relative to individual disciplines

All personnel records (including those of management, supervisors, foremen, and laborers) are maintained to ensure all personnel have current training and certification relative to their job assignments. All DRC's personnel receive specialized training in emergency management and are encouraged to further their education.

Employee and Subcontractor Training Programs

- Smith System Driver Training
- Hazardous Materials Training
- Demolition Safety
- Asbestos Abatement Training
- Power Line Awareness
- Hazardous Communication
- Lockout/Tagout
- Fire Prevention Training

"Your attention to safety is to be commended."

- Cynthia Halsey,
Environmental Services,
Okaloosa County, Florida

Drug Free Workplace

It is the goal of DRC to maintain a drug-free workplace in accordance with the Drug-Free Workplace Act of 1988. DRC has adopted the following policies on a case-by-case basis:

1. The unlawful manufacture, possession, distribution, or use of controlled substances is prohibited in the workplace.
2. As an ongoing condition of employment, employees are required to abide by this prohibition and to notify their supervisor, the Managing Director, or Vice President in writing and within five (5) days of the violation of any criminal drug statute arrest or conviction they receive.
3. Employees who violate this prohibition or receive such a conviction are subject to corrective or disciplinary action as deemed appropriate, up to and including termination.
4. DRC provides information about drug counseling and treatment.
5. DRC reserves the right to search and inspect for the maintenance of a safe workplace.

Staffing and Management

Please see Tab 3 for detailed information about staffing and management, including organizational structure, chain of command, and subcontracting plan.

Prompt Damage Resolution

- DRC maintains a damage hotline (888-721-4DRC) for all projects. A complaint manager is assigned to the project and is responsible for tracking all damage and repairs.
- DRC will investigate all damage complaints within 24 hours and will propose a resolution to the damaged party within 48 hours.

DOCUMENTATION AND DATA MANAGEMENT

Invoicing Procedure

DRC's invoicing procedure is as follows:

- Load tickets are received, logged, and then scanned into DRC's database system. Tickets are then entered and audited for accuracy.
- An invoice is created, along with the ticket data backup.
- The reconciliation process then takes place with either the Monitoring Firm or the reconciliation contact with the City.
- Once the invoice and ticket data have been 100% reconciled, the Monitoring Firm or the reconciliation contact with the jurisdiction recommends the invoice to FEMA for payment.
- Frequency: invoicing is usually performed on a biweekly basis.

Data Center

DRC maintains a fully staffed, fully operational Data Center at its headquarters all year. The Data Center is staffed by experienced personnel with extensive knowledge of recording, reporting, contract, and reimbursement requirements. The Data Center is equipped with state-of-the-art information technology and is prepared to meet and exceed the reporting requirements of each client. All servers and networked computers are backed up both on and off-site every day. The urgent nature of DRC's work requires that the Company remain online and in contact across its network at all times.

Daily Reports

DRC shall submit daily progress and quality control reports to the City for all activities. Each report will contain, at a minimum, the following information:

- Letterhead with DRC name and contact information
- Report Date
- Location of completed work
- Location of work for the next day
- Daily and cumulative hours for each piece of equipment and crew (Emergency Clearance)
- List of roads that were cleared (Emergency Clearance)
- Number of Crews (including number of trucks and loading equipment)
- Daily and cumulative totals of debris removed, by category
- Daily and cumulative totals of debris processed, to include method(s) of processing and disposal location(s)
- Daily estimate of hazardous waste debris segregated, and cumulative amount of hazardous waste placed in the designated holding area
- Number of hazardous trees and hanging limbs removed
- Problems encountered or anticipated and proposed solutions

Daily Reports are co-signed by the City's inspector to verify work performed. In addition, the City receives an original copy of all load tickets and receives and verifies for co-signature a Daily Reconciliation Sheet listing each load ticket, truck number, crew number, street, truck volume, percent full, credited volume of debris removed, and the total volume removed for the day. This Daily Reconciliation Sheet can become the invoicing document for the contract.

Documentation and Recovery Process

Prior to the beginning of hurricane season, DRC will meet with the City and the Debris Management Monitor to finalize and test the processes for inspection and documentation that are to be used during the response and recovery phases

of debris removal. At all times, DRC will provide the City access to all work sites and disposal areas. DRC and the Debris Management Monitor will have personnel in place to verify and maintain records regarding the contents and cubic yards of the vehicles entering and leaving the site. The Debris Management Monitor will coordinate data recording and information management processes, including but not limited to the following:

- Prepare detailed estimates and submit to FEMA for use in Project Worksheet preparation.
- Implement and maintain a disaster debris management system linking load ticket and Disaster Debris Management Site information, including reconciliation and photographic documentation processes.
- Provide daily, weekly, or other periodic reports for the City managers and DRC, noting work progress and efficiency, current/revised estimates, project completion and other schedule forecasts/updates.

DRC will provide the following assistance:

- Create recovery process documentation plan
- Maintain documentation of recovery process
- Provide written and oral status reports as requested to the City and the Debris Management Monitor
- Review documentation for accuracy
- Assist in preparation of claim documentation

DRC understands that complete and accurate records are required for the receipt of federal funds. We will provide the Debris Management Monitor with all requested information that is necessary for proper documentation. DRC will work closely with FEMA and other applicable State and Federal agencies to ensure that eligible debris collection and data documenting appropriately address likely concerns of the reimbursement agencies.

COMMUNICATION AND IN-FIELD TECHNOLOGY

Communication Technology

Real-time communication is used to facilitate the field team's access to project resources and allow reporting by the field teams to program management. Radios/cell phones are used to initiate mobilization, support communication between the off-site and on-site personnel before utilities are established, and provide a means of ongoing communication with the site management team. Cellular technology has been fortified and reinforced over the past decade, and recent events have proven that even if cellular telephone capability is impacted, text messaging is almost always available due to the minimal bandwidth required. Should this technology fail, DRC has satellite radios, which can be deployed in a matter of hours.

In-Field Technology

Project Manager's Toolbox

In the field, Project Managers utilize iPads to access DRC's Project Manager's Toolbox, an automated system which provides seamless real-time information exchange between office and field, no matter the size and scale of the project(s). The tool applies to all aspects of project management, including the following:

1. Real-time damage and complaint reporting and resolution
2. DDMS reporting and site close out documentation
3. Operations planning and daily reporting for client, monitor, and office
4. Zone assignments and progress tracking
5. Push Crew Tracking complete with time-stamped, geotagged photo backup

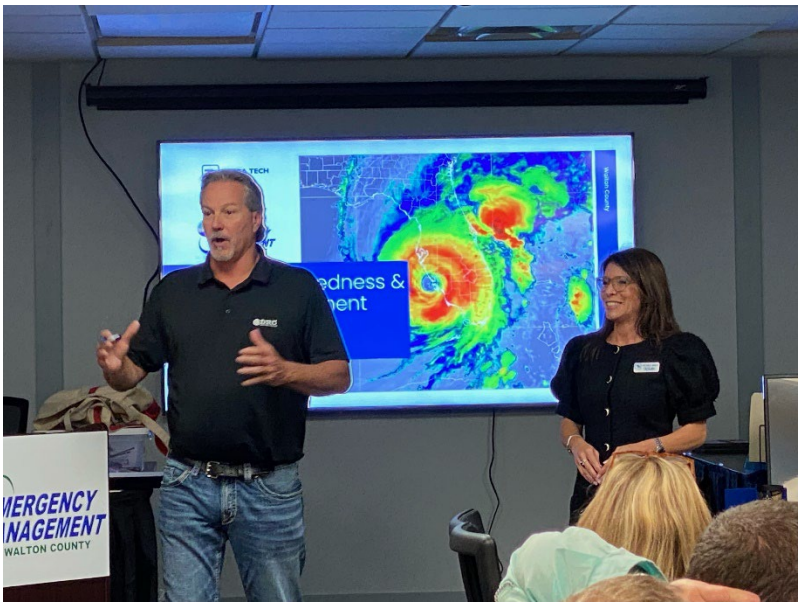
The toolbox replaces paper and endless emails with a secure database that utilizes Microsoft Multifactor authentication (MFA) and HIPAA compliant digital signatures.

Mapline

DRC utilizes innovative digital mapping technology to create custom maps specific to each project and jurisdiction. Maps may include any or all of the following:

- Equipment Staging Areas
- Collection Grids
- Landfills and DDMS Locations
- Milage Radius for Tiered Hauling Distances

Mapline is utilized to optimize routing and send precise coordinates to operators in the field. Maps are updated in real time and are readily accessible in the field through phones and iPads.



CLIENT INTERACTION PROGRAM

At DRC we take very seriously the faith placed in our team upon selection by the City of Destin as the Disaster Debris Management Provider. Having been the primary provider of services on some of the largest and most destructive events to ever impact our country, we appreciate and recognize the amount of information and interaction necessary for us to be completely prepared to provide the most effective debris removal program to the City of Destin.

It is for this reason that the DRC Management and Operations Team spends as much time as is necessary working with local government leaders in times of non-event to gain that essential, in-depth understanding of local issues, priorities, concerns, and objectives, to provide a level of responsiveness that is unmatched in the industry. DRC's Regional Manager will meet regularly with the City of Destin to discuss items such as Disaster Debris Management Site viability, priority roadways, critical access, and infrastructure concerns.

In any post-event scenario, participation by select City staff is critical. City employees, generally from Public Works or Solid Waste, provide direction and support pertaining to project approach, prioritization of push and collection routes, critical roadways and facilities, and physical nuances DRC might otherwise not know. DRC will begin to develop relationships with those responsible within the local government immediately upon contract award to establish and gain a deep understanding of the unique needs, concerns, and priorities of the City.

At no cost to the City, DRC will provide an annual "Pre-Season Debris Response & Readiness Workshop" whereby members of the City Debris Team, Public Works, and Finance & Administration can be updated on policy and guidance changes, roles and responsibilities of your debris management provider, and overall disaster debris educational training. These annual workshops have been immensely successful throughout the country, allowing the DRC team to interact with clients, share important information, and refresh local points of contact in the months leading up to hurricane season.

During times of post-event activation, DRC will engage the State staff and seek input continually, by way of daily meetings with all project participants, field interaction, and comprehensive daily reporting. This consistent interaction has

successfully proven on past activations to keep critical lines of communication in place, provide complete transparency into the daily process, progress, challenges, and accomplishments, and provide early answers to the public and local government officials.

DRC firmly believes in serving clients year-round and not just at the time of an event or activation. Whether we are needed to respond to a minor contract activation or a large-scale catastrophic event, DRC believes that adequate planning and preparation are key to a successful and fully reimbursable debris removal program.

Relationship between DRC and the Debris Management Monitor

Building a positive working relationship between DRC and the debris management monitoring firm is crucial to the success of any project. For more than 20 years, DRC has worked with third party debris monitoring firms to achieve success in projects of all sizes. We have worked with most major debris management monitoring firms in the United States. Thus, it is very rare that DRC begins a debris project without already being familiar with the firm and their personnel.

As such, DRC has worked with the systems and software of all the major third-party monitoring firms. From manual ticketing to the more technical electronic tracking and ticketing systems, DRC has experience with every iteration existing today. DRC's understanding of the key elements of 44 CFR and FEMA 325 also enables DRC to operate congruently with the monitoring firm. DRC's team is prepared to work effectively with the City's chosen monitor.

Post Event Evaluations

Hot Wash Meetings

DRC holds a Hot Wash with each jurisdiction post event. A Hot Wash is an after-action evaluation that occurs between DRC and the client. This post activation meeting serves as a forum for the client to discuss the project as a whole, the processes that were implemented, and any potential improvements. Additionally, DRC has an internal meeting to discuss development strategies and innovative concepts for future activations.

Subcontractor Evaluation

DRC has a large network of subcontractors and maintains long-standing relationships with trained and exclusively committed key subcontractors. Additionally, DRC strongly believes the use of local resources is vitally important to a successful disaster recovery operation. For decades, DRC has been building relationships with subcontractors across the nation. DRC utilizes a 55-point Post Event Subcontractor Evaluation Form to aid in building our reliable network of subcontractors.

POST EVENT SUBCONTRACTOR EVALUATION RATING FORM

Subcontractor _____
Event _____
Jurisdiction _____
Date Reviewed _____

5 = Excellent 4 = Good 3 = Satisfactory 2 = Unsatisfactory 1 = Poor		
1	Subcontractor mobilized within the timeframe required	
2	Subcontractor mobilized job with the required pieces of equipment	
3	Rate the appearance of equipment utilized	
4	Rate the reliability of equipment utilized	
5	Rate subcontractor's overall customer service (number of complaints	
6	Rate subcontractor's cooperation and interaction with monitoring firm	
7	Subcontractor left each collection point neat (rake ready)	
8	Rate subcontractor's overall productivity	
9	Rate subcontractor's response to repairing damages	
10	Rate subcontractor's timeliness and accuracy of invoicing	
11	Did subcontractor hold adequate equipment to the contract's conclusion?	
	TOTAL SCORE	

SUSTAINABILITY

DRC is committed to the protection and restoration of communities and ecosystems affected by disasters. Although many of the events we respond to are caused by the forces of nature, these events often result in widespread environmental impacts. Moreover, the mitigation of these disasters, including the transportation and processing of large volumes of waste material, can have negative environmental impacts if not pursued with the caution and sensitivity that define DRC's work.

The removal of debris and waste materials, the restoration of damaged and compromised natural and constructed habitats, and in some cases the reconstruction of damaged coastal, marine, and wetland environments are the core missions in a DRC disaster response. Furthermore, DRC is committed to ensuring that our work and its byproducts have minimal to no environmental impact. Finally, DRC has embarked on a recycling program to ensure the most advantageous disposal of all the materials that we remove.

Protecting Wildlife in Environmentally Sensitive Areas

DRC has a long history of successfully protecting wildlife and ecology in environmentally sensitive areas.

- In 2023, DRC removed sargassum from Sarasota beaches while coordinating with turtle surveyors and the Florida Department of Environmental Protection to implement proper procedures and ensure the protection of turtle nests.
- In 2021, DRC implemented measures to protect the local manatee population while performing marine debris removal, submerged vehicles removal, and the removal, screening, and placement of sand in Jefferson Parish, Louisiana. During this project, DRC mobilized 138 trucks on a single day.
- In 2008, DRC was activated in 23 Texas jurisdictions in the response to Hurricane Ike. Before commencing our debris removal operation in the ecologically sensitive coastal areas of Galveston Island, DRC staff received specialized training on how to protect the Kemp's Ridley Sea Turtle.

Pinellas County Red Tide

In 2018, DRC was activated in Pinellas County, Florida to remove and dispose of dead fish resulting from a one-million-acre red tide bloom in the Gulf of Mexico. A red tide bloom is caused by algae that produce toxins that kill aquatic life, make the surrounding air difficult to breathe, and often turn the water red. **DRC efficiently removed over 3.6 million pounds of dead fish in a three-month span**, using a variety of equipment. Shrimp boats were used to scoop up the dead fish offshore before they hit the beaches and inland waterways. For the fish that made it to shore, as well as into the canals, we implemented skimmer boats and beach rakes. DRC successfully cleaned and maintained **45 miles of coastline**, keeping the beaches suitable for visitors. With the assistance of the United States Coast Guard, we were able to monitor the red tide plume's movement by helicopter, coordinating with the Florida Wildlife Commission as to the migration and effect of the algae. DRC and our partners on this project were awarded the **2018 Environmental Project of the Year** by the West Coast Branch of the American Public Works Association.

BP Deepwater Horizon Oil Spill

DRC successfully performed in several contracts directly related to the oil spill in the Gulf of Mexico which flowed for three months in 2010. DRC conceived, executed, supervised, and funded a **150-mile Gulf of Mexico shoreline protection system** in response to the oil spill. We relied on our depth of knowledge of debris handling in ecologically sensitive environments to guide the placement, management, and removal of oil containment boom. **DRC staff had a personal interest in protecting the Gulf Coast as they were among the affected residents.**

During this time, DRC was successfully classified as an Oil Spill Removal Organization (OSRO) by the United States Coast Guard. The company met several classifications which were listed on the OSRO Classification Matrix. Participation in this program allowed DRC to provide professionally recognized services to Escambia County, Florida as well as Plaquemines Parish, Terrebonne Parish, and Lafitte Parish, Louisiana.

DRC was tasked with designing coastal protective systems and unique collection programs along more than one hundred miles of estuaries in southwest Louisiana. The programs involved intensive employee training relative to the identification and protection of wildlife nesting and reproduction areas. DRC also played a role in setting up wildlife recovery and cleaning stations in Plaquemines Parish, Louisiana, where employees volunteered to help conduct rehabilitation and release programs.

Recycling

DRC has a wealth of experience performing landfill avoidance projects.

- Following Hurricane Ian in 2022, DRC was activated in 19 jurisdictions, managed 21 DDMS sites, and removed and disposed of over 4.9 million cubic yards of debris in Sarasota County, Florida, and surrounding municipalities. DRC recycled 100% of the 3.3 million cubic yards of vegetative debris collected.
- In our response to Hurricane Ike in Houston in 2008, DRC recycled 100% of the more than five million cubic yards of vegetative debris we collected through a joint program with Republic Services. The material was used as alternative daily cover in landfills; as roadbed for temporary roads; as compost; and was given to citizens for use in landscaping. The same year in Galveston, DRC separated materials such as reusable wood, glass, metals, and drywall to achieve a high percentage of material reuse.
- DRC is pleased to have a formal partnership with Agromin, California's largest organics recycler. Agromin was voted Composter of the Year by the US Composting Council. All of the vegetative debris collected by DRC from California clients

is composted and 100% recycled by Agromin. These materials are turned into rich soil to nourish agricultural land as well as for use by residents, municipalities, and landscapers throughout the state.

Insurance

DRC is one of the few companies in our industry to carry environmental insurance. While our operating procedures strictly adhere to environmental guidelines, the operation of DDMS sites within a jurisdiction presents an element of potential exposure. The insurance held by DRC places an extra level of protection for the City that goes beyond the protection already provided through sound operating practices. Additionally, all of DRC's key personnel maintain a current 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) certificate.

RECOVER

Prepare → Respond → **Recover**

- → Demolition
- → Man Camp Services
- → Post Disaster Temporary Housing
- → Marine Services

Once the initial response phase is over, full recovery from a major disaster can still be a big job. Affected communities may require many additional services to be restored to pre-event wholeness.

Under the joint ownership of the Sullivan Brothers Family of Companies, DRC Emergency Services, SLS, Forgen, and Callan Marine comprise a core of companies that excel at providing a turnkey approach to total disaster management. We stand alone in the industry as the only company that can provide the full range of disaster response and recovery services.

SLS

DRC's sister Company, SLS, is a prominent provider of post-disaster temporary housing. From turnkey temporary trailer facilities to massive man camps designed to house and feed thousands, SLS has designed and performed housing solutions for a wide range of post disaster applications.

SLS pioneered the current FEMA Sheltering and Temporary Essential Power (STEP) program during the aftermath of Hurricane Sandy in New York. The Program in New York was called "Rapid Repair," and a similar program in Baton Rouge was called "Shelter at Home." These programs are designed to perform essential elements of restoring damaged single-family residences and return homeowners back into their homes quickly. Rapidly returning displaced families to their homes provides a sense of community and normalcy to the affected residents. Additionally, the cost of the typical STEP program is approximately 20% of the cost of placing a displaced family into a trailer or similar structure.

SLS is composed of four major divisions: RESPONSE, HEALTH, FEDERAL SERVICES, and HOUSING. Each division is distinct in focus, scope and services provided, but seamlessly utilizes a pool of leadership, talent, resources and financial capabilities.

We perform a multitude of large-scale assignments for federal, state, regional, county and municipal entities — **with a keen focus on the comprehensive rehabilitation, reconstruction and recovery of communities impacted by emergencies and disasters.** Additionally, our team provides infrastructure, facility construction and rehabilitation services; remote workforce compounds and basecamp facilities; turnkey health solutions; and intermodal, industrial and marine facility construction.

Forgen

At Forgen, we leave the planet better than we found it. Our integrated geotechnical and civil construction and environmental remediation services restore and strengthen our natural surroundings to protect people, communities, and the environment for generations to come. We have successfully delivered large, multi-disciplinary projects for public and private sector clients across North America for more than a decade, safely tackling complex challenges across a variety of industries.

Forgen's core service lines include Geotechnical and Civil Construction, Disaster Mitigation and Recovery, Flood Control and Ecosystem Restoration, and Environmental Remediation.

Forgen-DRC Joint Venture

Forgen and DRC formed a joint venture to strengthen our ability to support emergency response efforts for wildfire and hurricane disasters nationwide. The joint venture combines Forgen's wildfire response and debris removal experience in the western US with DRC's emergency response and vehicle and tree removal expertise supporting hurricane disaster management and recovery efforts on the Gulf Coast. Forgen and DRC are part of a multi-billion-dollar Sullivan Family of Companies with more than $2.2B in USACE design-build experience in the past five years.

After the Southern Branch wildfires in California in 2020, Forgen and DRC worked in tandem to remove debris from over 600 properties. We removed 40,000 tons of ash and debris and 16,000 tons of potentially impacted soil. We also removed and recycled 32,000 tons of concrete, 4,400 tons of metal, and 11,800 hazardous trees.

Together, Forgen and DRC cleared 168 properties after the 2021-2022 Marshall Fire in Boulder County, Colorado. We removed 40,590 tons of concrete; 41,333 tons of ash, soil, and debris; 805 tons of metal; and 880 tons of vegetative debris.

IFollowing the Maui fires in 2023, Forgen and DRC teamed with Native Hawaiian organization Dawson Solutions to provide disaster relief execution and management for the United States Army Corps of Engineers. We completed nearly 1,600 property assessments in 90 days, working 7 days a week. The data collected was used to determine the level of effort required to clean up each property in the next phase.

CALLAN MARINE

DRC's sister Company, Callan Marine, is a highly specialized construction firm capable of providing design, engineering, management and construction services, such as the following:

- Marine debris management and removal
- Offshore and inland dredging
- Shoreline protection
- Beach re-nourishment
- Port/Dock facility construction
- Wetlands construction
- Marine protection mitigation and improvements

For over ten years, Callan Marine has been serving public and private clients by providing crucial dredging services and executing new maritime construction and expansion projects. We restore berthing depths for ship docks and navigation channels, facilitating transportation in our nation's waterways.

With a mission of safety, quality, and integrity, Callan Marine can customize a response solution for you.

As the leading marine construction service provider on the Gulf Coast, Callan Marine has dredged thousands of miles of waterways in the region to keep our customers productive.

1. TEN YEAR PAST PERFORMANCE

Please see the list below for projects performed by DRC over the last 10 years. Project values below with asterisks (*) are in progress and amounts are subject to change.

2. PRIMARY CONTRACTOR ON PROJECTS EXCEEDING $25,000,000

The list below includes multiple examples of projects exceeding $25,000,000. DRC was the primary contractor on all projects listed, unless otherwise noted.

2025	Contracting Agency	Description of Work	Contract Amount	Cubic Yards
March	Pike County, KY	February 2025 Flood Event	TBD	TBD
March	Coal Run, KY	February 2025 Flood Event	TBD	TBD
March	Letcher County, KY	February 2025 Flood Event	TBD	TBD
March	Broward County, FL	February 2025 Flood Event	TBD	TBD
March	Floyd County, KY	February 2025 Flood Event	TBD	TBD
March	Knott County, KY	February 2025 Flood Event	TBD	TBD

FINANCIAL CAPABILITY

DRC is one of the most **financially sound and stable companies** in the disaster response industry. With a **bonding capacity of over $1 billion** and access to dedicated cash and credit lines **of more than $500 million**, DRC has the ability to manage and complete multiple projects simultaneously without being hindered by a lack of operating capital. During high storm seasons over the past decade, DRC operated substantially out of pocket prior to client payment, yet remained fully capable of providing the critical services necessary to complete all contracts.

- DRC's combined contract total for 2024 is valued at over $229,000,000. During this time, DRC removed and disposed of over 10,300,000 cubic yards of debris across ten states.
- In 2021, DRC removed 18,000,000 cubic yards of debris and managed 89 debris management sites in response to Hurricane Ida alone. Our combined contract total for 2021 was valued at over $457,000,000.
- The 2020 hurricane season consisted of numerous storms, including Hurricanes Hanna, Laura, Isaias, Sally, Delta, and Zeta; DRC was mobilized in Alabama, Georgia, Louisiana, Mississippi, Florida, Texas, and North Carolina and removed and disposed of over 5,900,000 cubic yards of debris for contracts totaling over $95 million.
- The 2018 hurricane season brought several storms, most notably Hurricanes Florence and Michael. With only two weeks of reprieve between each storm, DRC mobilized in Florida, North Carolina, Virginia and Georgia simultaneously.
- Three major hurricanes hit continental North America in 2017: Hurricanes Harvey, Irma, and Maria. DRC managed a total of 53 projects simultaneously in the months that followed these disasters, totaling $251 million and 6 million cubic yards.
- 2016 brought several severe flooding events, primarily in Texas and Louisiana. Additionally, Hurricanes Hermine and Matthew wreaked havoc on Florida and the East Coast. DRC was activated in 30 total jurisdictions, picked up 4 million cubic yards of debris, and was awarded over $64.7 million in contracts.
- The winter of 2014 wreaked havoc on the eastern seaboard. Working primarily in the Carolinas, DRC managed the debris removal for five counties in North Carolina and eight counties for SCDOT. DRC removed over 225,000 trees and 1,400,000 cubic yards of debris, with a total contract value of $54,449,473.
- DRC successfully performed in 10 contracts that were directly related to the British Petroleum Deepwater Horizon oil spill in the Gulf of Mexico which flowed for three months in 2010. The company's depth of knowledge with debris handling in ecologically sensitive environments was a significant asset to the regions affected. The total contract value is $185,334,469.

DRC has never defaulted on a contract or filed for bankruptcy. The company has a 100% assignment completion record.

Re: DRC Emergency Services LLC

To Whom It May Concern:

DRC Emergency Services LLC and its affiliates currently have the financial resources to support business operations and the ability to obtain additional resources if needed. The Company, along with a group of co-borrowers with common ownership, has a multi-year syndicated revolving credit facility led by Bank of America N.A. with borrowing capacity up to $850,000,000. The internally generated liquidity of The Companies (including DRC Emergency Services LLC) and their individual owners in combination with the revolver provides ample financial capability to complete large scale jobs without interference or slow down. The amount can be repaid and redrawn, subject to compliance with the terms of the Company's credit agreement. The credit agreement runs through February 26, 2029.

Furthermore, DRC Emergency Services LLC has not defaulted on its obligations to the bank and is not currently in default on its obligations.

The owners of DRC Emergency Services LLC and its affiliates have been a valued client of Bank of America since 2008. During that time, they have handled all their depository and loan accounts in a satisfactory manner. We have witnessed DRC Emergency Services LLC complete multiple projects and coordinate large scale efforts with sound execution.

Please feel free to contact me should you need additional information.

Sincerely,

Tim Thurman
Senior Vice President

Re: DRC Emergency Services, LLC

To Whom It May Concern:

We are the surety bonding agent for DRC Emergency Services, LLC, of Galveston, TX. In this capacity, we have become very familiar with their financial, management, and operational capabilities. DRC Emergency Services, LLC is bonded through Travelers Casualty and Surety Company of America (Travelers), which has an A.M. Best Rating of A++ with a Financial Size Category of XV. Travelers has agreed to support performance and payment bonds for single projects up to $500,000,000 as long as these projects fit within a $1 Billion aggregate work program.

Please note that the decision to issue performance and payment bonds is a matter between DRC Emergency Services, LLC, and Travelers, and will be subject to the review and approval of the contract terms, conditions and related underwriting criteria at the time the bonds are requested. We assume no liability to third parties or to you if for any reason Travelers does not execute said bonds.

We hold DRC Emergency Services, LLC in the highest possible regard and it is our pleasure and privilege to recommend them for your consideration.

Very truly yours,

BOWEN, MICLETTE & BRITT INSURANCE AGENCY, LLC

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

MELTON & MELTON, L.L.P.
CERTIFIED PUBLIC ACCOUNTANTS

INDEPENDENT AUDITOR'S REPORT

To the Members of
DRC Emergency Services, LLC

Opinion

We have audited the consolidated financial statements of DRC Emergency Services, LLC, which comprise the consolidated balance sheet as of December 31, 2024, and the related consolidated statements of income and members' equity and cash flows for the year then ended, and the related notes to the consolidated financial statements.

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of DRC Emergency Services, LLC, as of December 31, 2024, and the results of its operations and its cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of DRC Emergency Services, LLC and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about DRC Emergency Services, LLC's ability to continue as a going concern for one year after the date that the consolidated financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of DRC Emergency Services, LLC's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about DRC Emergency Services, LLC's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control–related matters that we identified during the audit.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

DRC EMERGENCY SERVICES, LLC
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
December 31, 2024

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Nature of Business

DRC Emergency Services, LLC ("DRC") provides disaster response and recovery services from major catastrophes. DRC is headquartered in Galveston, Texas.

SWFL Response LLC ("SWFL") is a joint venture which provides disaster response and recovery services from major catastrophes. SWFL is headquartered in Deerfield Beach, Florida. DRC has a 50% ownership in the joint venture, which is consolidated in the accompanying consolidated financial statements.

Collectively, DRC and SWFL are referred to as the "Company" in the accompanying footnotes to the consolidated financial statements herein. All significant intercompany balances have been eliminated in the consolidation.

Cash and Cash Equivalents

The Company considers cash and cash equivalents to include all highly liquid investments purchased with an original maturity of three months or less.

Accounts Receivable and Unbilled Revenue

Accounts receivable from performing disaster and recovery services are based on contracted prices and are recorded when contracts are billed. Accounts receivable are stated at the amount the Company expects to collect. Unbilled revenue are related to revenue earned but not yet invoiced due to milestones that must be met. The Company maintains allowances for credit losses for estimated losses resulting from the inability of its customers to make the required payments. Management considers the following factors when determining the collectability of specific customer accounts: customer creditworthiness, past transaction history with the customer, current economic industry trends, and changes in customer payment terms. Past-due balances over 90 days and other higher-risk amounts are reviewed individually for collectability. If the financial condition of the Company's customers were to deteriorate, adversely affecting their ability to make payments, additional allowances would be required. Based on management's assessment, the Company provides for estimated uncollectible amounts through a charge to earnings and a credit to a valuation allowance. Balances that remain outstanding after the Company has used reasonable collection efforts are written off through a charge to the valuation allowance and credit to accounts receivable. At December 31, 2023 the allowance for credit losses was $2,268,964. During 2024, the Company recorded an additional provision of $8,303,297, thus increasing the allowance for credit losses at December 31, 2024 to $10,572,261. The Company had no credit losses during 2024.

Property and Equipment

Property and equipment is recorded at cost. Improvements or betterments of a permanent nature are capitalized. Expenditures for maintenance and repairs are charged to expense as incurred. The cost of assets retired or otherwise disposed of and the related accumulated depreciation are eliminated from the accounts in the year of disposal. Gains or losses resulting from property and equipment disposals are credited or charged to operations currently. Depreciation is computed on a straight-line basis over the estimated useful lives of the assets.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Management believes that these estimates and assumptions provide a reasonable basis for the fair presentation of the consolidated financial statements.

Presentation of Sales Taxes

Various states impose a sales tax on the Company's sales to nonexempt customers. The Company collects that sales tax from customers and remits the entire amount to the state. The Company's accounting policy is to exclude the tax collected and remitted to the state from service revenues and cost of service revenues.

Income Taxes

For federal income tax purposes, the Company is treated as a partnership. In accordance with federal income tax regulations, no federal income taxes are levied on a partnership, but rather on the individual members. Consequently, no provision or liability for federal income taxes has been reflected in the accompanying consolidated financial statements.

The Company is subject to the State of Texas gross margin tax and foreign tax, which is included in the state and foreign income tax provision in the consolidated statement of income and members' equity.

Management evaluated the Company's tax positions and concluded that the Company had taken no uncertain tax positions that require adjustment to the consolidated financial statements. The Company has recorded $1,799,394 in tax-related interest expense as interest expense in the consolidated statement of income and members' equity for the year ended December 31, 2024. The Company has no tax-related penalties recorded for the year ended December 31, 2024. With few exceptions, the Company is no longer subject to income tax examinations by the U.S. federal, state, or foreign tax authorities for years before 2021.

Revenue Recognition

Service Contracts

The Company recognizes revenue from disaster and recovery service contracts. Under these contracts, the Company has the right to consideration from the customer in an amount that corresponds directly with the value to the customer of the Company's performance completed to date. Revenue is recognized when services are performed and contractually billable. Revenue recognized on service contracts that have not been billed to customers is classified as a current asset under unbilled revenue in the consolidated balance sheet. Customer payments on service contracts are typically due within 30 to 90 days of billing, depending on the contract.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Revenue Recognition (Continued)

Contract Assets and Liabilities

Contract assets represent revenue recognized in excess of amounts billed and are reflected as unbilled revenue. Unbilled revenue represent an unconditional right to payment subject only to the passage of time, and are reclassified to accounts receivable when they are billed under the terms of the contract. Contract assets totaled $95,802,455 and $2,906,175 at December 31, 2024 and 2023, respectively. Contract liabilities represent amounts billed to customers in excess of revenue recognized to date. There were no contract liabilities as of December 31, 2024 or 2023.

Advertising Costs

The Company expenses advertising costs as they are incurred. Advertising expense for the year ended December 31, 2024 was $213,014.

NOTE 2 - ACCOUNTS RECEIVABLE

At December 31, 2023, accounts receivable was $99,461,856.

Accounts receivable at December 31, 2024 consist of the following:

Contracts	$ 212,001,859
Related party	6,765
Retainage	1,066,754
	213,075,378
Less: Allowance for credit losses	10,572,261
	$ 202,503,117

NOTE 3 - PROPERTY AND EQUIPMENT

A summary of property and equipment and related accumulated depreciation at December 31, 2024 is as follows:

Asset Description	Useful Lives	
Land		$ 1,500,000
Buildings and leasehold improvements	3 - 39 years	262,892
Furniture and fixtures	3 - 5 years	148,746
Automobiles and trucks	3 - 5 years	1,851,309
		3,762,947
Less: Accumulated depreciation		1,556,969
		$ 2,205,978

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 3 - PROPERTY AND EQUIPMENT (CONTINUED)

Depreciation expense for the year ended December 31, 2024 amounted to $550,236 and is included in selling, general, and administrative expenses in the accompanying consolidated statement of income and members' equity.

NOTE 4 - ACCOUNTS PAYABLE

Accounts payable at December 31, 2024 consist of the following:

Contracts	$ 874,008
Retainage	24,892,582
Related parties	1,962,677
	$ 27,729,267

NOTE 5 - CREDIT AGREEMENT

On February 26, 2024, the Company, along with nine other entities under common control, replaced a previous credit agreement with a committed $500,000,000 syndicated credit facility and a $100,000,000 accordion. This syndicated credit facility has a maturity date of February 26, 2029. On November 8, 2024, the syndicated credit facility was amended to extend the syndicated credit facility to $850,000,000. This amendment expires on December 31, 2025, at which point the syndicated credit facility reverts back to $600,000,000. The syndicated credit facility is a secured overnight financing rate (SOFR) based loan, with an option to make either a Base Rate loan, which is the highest of the Prime Rate for such day, the sum of the Federal Funds rate plus 0.50%, and the term SOFR for such day plus 1.00%, and 1.00%, or a Term SOFR loan which uses the Term SOFR rate plus 0.10%. The interest rate is determined at the date funds are borrowed and is paid one month later, at which point in time the interest rate is adjusted to reflect the new market rate. The entities are also charged each quarter an unused fee for any unused amount, based on the entities' leverage ratio. Any unpaid interest and principal are due at maturity. The total amount utilized against the syndicated credit facility is $650,000,000 at December 31, 2024, and is collateralized by all assets of the entities. The Company's principal balance is included in long-term debt in the consolidated balance sheet.

The Company's balance under this loan facility at December 31, 2024 are as follows:

Revolving loan facility principal	$125,000,000
Less: Debt issuance cost	(316,063)
	$124,683,937

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 6 - COMMITMENTS AND CONTINGENCIES

Concentrations of Credit Risk

The Company has a concentrated credit risk for cash and cash equivalents because it maintains deposits and temporary cash investments with financial institutions. At times, such deposits and investments are in excess of federally insured limits. Management feels exposure of loss is minimal and any actual loss is unlikely.

The Company controls its credit risk associated with accounts receivable by maintaining credit policies, which include credit evaluations and monitoring procedures. The Company has no formal policy requiring collateral or other security to support its accounts receivable, although it has statutory rights to file liens on real property for amounts owed the Company for which amounts due are not paid.

The Company received approximately 52% of revenue from three customers for the year ended December 31, 2024. The Company has approximately 50% of its accounts receivable outstanding from the same three customers at December 31, 2024.

Employee Benefit Plan

The Company has a 401(k) Plan (the "Plan") that covers substantially all employees of the Company and certain other related participating employers. Covered employees are eligible to participate in the Plan upon completion of one year of service and the attainment of age 21. Participating employees may elect to contribute an amount up to the limited dollar amount set by law. Employer matching and profit sharing contributions are discretionary. For 2024, the employer matching contribution was 100% up to 4% of the participant's eligible compensation. The Company's contribution to the Plan for the year ended December 31, 2024 was $65,856.

Litigation

The Company has been named a defendant in certain lawsuits arising from the ordinary course of business. Management does not believe such litigation will have a material adverse impact on the consolidated financial statements.

NOTE 7 - RELATED-PARTY TRANSACTIONS

DRC paid $2,890,800 in management fees to a related party through common ownership.

DRC has a revolving credit note with a related party with availability up to $79,000,000. Interest of 1.01% is due monthly. Any unpaid interest and principal are due at maturity in December 2030. The outstanding balance at December 31, 2024 was $3,111,173.

For the year ended December 31, 2024, the Company incurred interest expense on related party debt totaling $1,173.

The Company issued a note receivable to a related party through common ownership of $28,454,651 at December 31, 2024. Interest on the note is 1.01% per annum, outstanding principal and unpaid interest due at maturity on December 31, 2030.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 8 - FAIR VALUE

The Company has a number of financial instruments, mainly cash, accounts receivable, and accounts payable, none of which are held for trading purposes. Management estimates that the fair value of all financial instruments at December 31, 2024 approximates carrying value due to the short maturities of the financial instruments.

NOTE 9 - SUBSEQUENT EVENTS

Management has evaluated subsequent events through March 13, 2025, the date the consolidated financial statements were available to be issued.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

This information is protected as a trade secret under the Florida Uniform Trade Secrets Act, Florida Statutes § 688.001 et seq., and the Defend Trade Secrets Act, 18 U.S.C. § 1836 et seq., and any unauthorized use, disclosure, or misappropriation is strictly prohibited and may result in legal action.

MELTON & MELTON, L.L.P.
CERTIFIED PUBLIC ACCOUNTANTS

INDEPENDENT AUDITOR'S REPORT

To the Members of
DRC Emergency Services, LLC and Affiliate

Opinion

We have audited the consolidated financial statements of DRC Emergency Services, LLC and Affiliate, which comprise the consolidated balance sheet as of December 31, 2023, and the related consolidated statements of income and members' equity and cash flows for the year then ended, and the related notes to the consolidated financial statements.

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of DRC Emergency Services, LLC and Affiliate, as of December 31, 2023, and the results of their operations and their cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of DRC Emergency Services, LLC and Affiliate and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about DRC Emergency Services, LLC and Affiliate's ability to continue as a going concern for one year after the date that the consolidated financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of DRC Emergency Services, LLC and Affiliate's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about DRC Emergency Services, LLC and Affiliate's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control–related matters that we identified during the audit.

The Company considers cash and cash equivalents to include all highly liquid investments purchased with an original maturity of three months or less.

Accounts Receivable and Unbilled Revenue

Accounts receivable from performing disaster and recovery services are based on contracted prices and are recorded when contracts are billed. Accounts receivable are stated at the amount the Company expects to collect. Unbilled revenue are related to revenue earned but not yet invoiced due to milestones that must be met. The Company maintains allowances for credit losses for estimated losses resulting from the inability of its customers to make required payments. Management considers the following factors when determining the collectibility of specific customer accounts: customer creditworthiness, past transaction history with the customer, current economic industry trends, and changes in customer payment terms. Past-due balances over 90 days and other higher-risk amounts are reviewed individually for collectibility. If the financial condition of the Company's customers were to deteriorate, adversely affecting their ability to make payments, additional allowances would be required. Based on management's assessment, the Company provides for estimated uncollectible amounts through a charge to earnings and a credit to a valuation allowance. Balances that remain outstanding after the Company has used reasonable collection efforts are written off through a charge to the valuation allowance and a credit to accounts receivable. During 2023, the Company incurred no credit losses.

Property and Equipment

Property and equipment is recorded at cost. Improvements or betterments of a permanent nature are capitalized. Expenditures for maintenance and repairs are charged to expense as incurred. The cost of assets retired or otherwise disposed of and the related accumulated depreciation are eliminated from the accounts in the year of disposal. Gains or losses resulting from property and equipment disposals are credited or charged to operations currently. Depreciation is computed on a straight-line basis over the estimated useful lives of the assets.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Management believes that these estimates and assumptions provide a reasonable basis for the fair presentation of the consolidated financial statements.

Presentation of Sales Taxes

Various states impose a sales tax on the Company's sales to nonexempt customers. The Company collects that sales tax from customers and remits the entire amount to the state. The Company's accounting policy is to exclude the tax collected and remitted to the state from service revenues and cost of service revenues.

Income Taxes

For federal income tax purposes, the Company is treated as a partnership. In accordance with federal income tax regulations, no federal income taxes are levied on a partnership, but rather on the individual members. Consequently, no provision or liability for federal income taxes has been reflected in the accompanying consolidated financial statements.

The Company is subject to the State of Texas gross margin tax and foreign tax, which is included in the state and foreign income tax provision in the consolidated statement of income and members' equity.

Management evaluated the Company's tax positions and concluded that the Company had taken no uncertain tax positions that require adjustment to the consolidated financial statements. The Company has no tax-related interest or penalties. With few exceptions, the Company is no longer subject to income tax examinations by the U.S. federal, state, or foreign tax authorities for years before 2020.

Revenue Recognition

Service Contracts

The Company recognizes revenue from disaster and recovery service contracts. Under these contracts, the Company has the right to consideration from the customer in an amount that corresponds directly with the value to the customer of the Company's performance completed to date. Revenue is recognized when services are performed and contractually billable. Revenue recognized on service contracts that have not been billed to customers is classified as a current asset under unbilled revenue in the consolidated balance sheet. Customer payments on service contracts are typically due within 30 to 90 days of billing, depending on the contract.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Revenue Recognition (Continued)

Contract Assets and Liabilities

Contract assets represent revenue recognized in excess of amounts billed and are reflected as unbilled revenue. Unbilled revenue represent an unconditional right to payment subject only to the passage of time, and are reclassified to accounts receivable when they are billed under the terms of the contract. Contract assets totaled $2,906,175 and $2,853,816 at December 31, 2023 and 2022, respectively. Contract liabilities represent amounts billed to customers in excess of revenue recognized to date. There were no contract liabilities as of December 31, 2023 or 2022.

Advertising Costs

The Company expenses advertising costs as they are incurred. Advertising expense for the year ended December 31, 2023 was $98,842.

NOTE 2 - ACCOUNTS RECEIVABLE

At December 31, 2022, accounts receivable was $161,711,729.

Accounts receivable at December 31, 2023 consist of the following:

Contracts	$ 97,853,898
Retainage	3,876,922
	101,730,820
Less: Allowance for credit losses	2,268,964
	$ 99,461,856

NOTE 3 - PROPERTY AND EQUIPMENT

A summary of property and equipment and related accumulated depreciation at December 31, 2023 is as follows:

Asset Description	Useful Lives	
Land		$ 1,500,000
Buildings and leasehold improvements	3 - 39 years	662,616
Furniture and fixtures	3 - 5 years	82,598
Automobiles and trucks	3 - 5 years	1,310,780
		3,555,994
Less: Accumulated depreciation		1,284,920
		$ 2,271,074

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 3 - PROPERTY AND EQUIPMENT (CONTINUED)

Depreciation expense for the year ended December 31, 2023 amounted to $426,437 and is included in selling, general, and administrative expenses in the accompanying consolidated statement of income and members' equity.

NOTE 4 - ACCOUNTS PAYABLE

Accounts payable at December 31, 2023 consist of the following:

Contracts	$ 19,513,755
Retainage	9,523,211
Related parties	9,409,096
	$ 38,446,062

NOTE 5 - CREDIT AGREEMENT

On January 31, 2020, DRC, along with four other entities under common control amended the credit agreement with a financial institution syndication. On December 17, 2021, the credit agreement was further amended, joining five additional entities under common control to the credit agreement. On April 15, 2022, the credit agreement also exercised the accordion increasing the availability from $400,000,000 to $500,000,000 and extended the maturity date to January 31, 2027. It also changed from a LIBOR based loan to a Bloomberg Short-Term Bank Yield Index Rate (BSBY) based loan with an option to use the higher of Prime rate plus 0.25%, or the sum of the Federal Funds rate plus 0.50%, or the Adjusted LIBOR rate (defined as LIBOR multiplied by the Statutory Reserve Rate) plus 1.00%. On December 26, 2023, the credit agreement was again amended to remove from the agreement one of the original four other entities under common control. All other terms of the agreement remain the same. The entities are also charged each quarter an unused fee for any unused amount, based on the entities' leverage ratio. Interest is payable on a quarterly basis with principal due at maturity. The total amount utilized against the Revolving loan facility is $333,281,013 as of December 31, 2023 and is collateralized by all assets of the entities. DRC's balance is included in long-term debt in the consolidated balance sheet. The Company did not have a balance under this credit agreement at December 31, 2023 and had $220,699 of unamortized debt issuance costs associated with this credit agreement.

On February 26, 2024, the Company, along with nine other entities under common control, replaced the existing credit agreement with a committed $500,000,000 syndicated credit facility and a $100,000,000 accordion. The syndicated credit facility is a secured overnight financing rate (SOFR) based loan, with an option to make either a Base Rate loan, which is the highest of the Prime Rate for such day, the sum of the Federal Funds rate plus 0.50%, and the term SOFR for such day plus 1.00%, and 1.00%, or a Term SOFR loan which uses the Term SOFR rate plus 0.10%. This new syndicated credit facility has a maturity date of February 26, 2029.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 6 - COMMITMENTS AND CONTINGENCIES

Concentrations of Credit Risk

The Company has a concentrated credit risk for cash and cash equivalents because it maintains deposits and temporary cash investments with financial institutions. At times, such deposits and investments are in excess of federally insured limits. Management feels exposure of loss is minimal and any actual loss is unlikely.

The Company controls its credit risk associated with accounts receivable by maintaining credit policies, which include credit evaluations and monitoring procedures. The Company has no formal policy requiring collateral or other security to support its accounts receivable, although it has statutory rights to file liens on real property for amounts owed the Company for which amounts due are not paid.

The Company received approximately 80% of revenue from two customers for the year ended December 31, 2023. The Company has 56% of its accounts receivable outstanding from the same two customers at December 31, 2023.

Employee Benefit Plan

The Company has a 401(k) Plan (the "Plan") that covers substantially all employees of the Company and certain other related participating employers. Covered employees are eligible to participate in the Plan upon completion of one year of service and the attainment of age 21. Participating employees may elect to contribute an amount up to the limited dollar amount set by law. Employer matching and profit sharing contributions are discretionary. For 2023, the employer matching contribution was 100% up to 4% of the participant's eligible compensation. The Company's contribution to the Plan for the year ended December 31, 2023 was $94,618.

Litigation

The Company has been named a defendant in certain lawsuits arising from the ordinary course of business. Management does not believe such litigation will have a material adverse impact on the consolidated financial statements.

NOTE 7 - RELATED-PARTY TRANSACTIONS

DRC paid $2,890,800 in management fees to a related party through common ownership.

DRC has a revolving credit note with a related party with availability up to $79,000,000. Interest of 1.01% is due monthly. Any unpaid interest and principal are due at maturity in December 2030. There was no outstanding balance at December 31, 2023.

For the year ended December 31, 2023, the Company incurred interest expense on related party debt totaling $64,293.

The Company issued a note receivable to a related party through common ownership of $23,014,963. Interest on the note is 1.01% per annum, outstanding principal and unpaid interest due at maturity on December 31, 2030.

CONFIDENTIAL AND PROPRIETARY TRADE SECRET INFORMATION

NOTE 8 - FAIR VALUE

The Company has a number of financial instruments, mainly cash, accounts receivable, and accounts payable, none of which are held for trading purposes. Management estimates that the fair value of all financial instruments at December 31, 2023 approximates carrying value due to the short maturities of the financial instruments.

NOTE 9 - SUBSEQUENT EVENTS

Management has evaluated subsequent events through March 22, 2024, the date the consolidated financial statements were available to be issued.

DRC EMERGENCY SERVICES, LLC
THREE YEAR LITIGATION
AND REGULATORY LIST

(Updated and Revised: March 19, 2025)

The following is a list of litigation pertaining to disaster recovery operations by DRC Emergency Services, LLC ("DRC") pending, settled, dismissed or abandoned during the three-year period from the above date

ACTIVE PENDING CASES:

Nelson v. RPF Emer. Servs., et al, No. 20-900353, Cir. Ct. Baldwin County, AL. Terminated sub-subcontractor sued DRC and its President seeking damages for termination from the project. Claim unquantified. No liability for DRC or its President; no contract privity.

DISMISSED, SETTLED OR CLOSED CASES:

North Captiva Barge Co. v. DRC Emer. Servs., Case No. 24-7157, Lee County, FL. Vessel owner with no contract with DRC sought payment from DRC for movement of equipment requested by unauthorized lower tier subcontractor. Claim voluntarily dismissed by plaintiff, March 11, 2025.

Dansby v. First Call Storm Removal, LLC, #22-900074, Marengo Co., AL Circuit Court. Personal injury arising from an automobile accident during debris removal operations. Case settled; plaintiff released all claims on October 28, 2024.

Fairlake Property Partners v. DRCES, #202378691, Harris County, TX. Dock and bulkhead property damage claim following a dredging project. Parties resolved the matter without further litigation and the case was non-suited January 16, 2025.

Goldman v. DRC Emer. Servs, LLC, et al, #22-900011, Washington County, AL Cir. Ct., Personal injury claim arising from automobile accident. Plaintiff rear-ended debris truck. Case settled.

White v. Florida Dept. of Env'l Protection, et al, #20-1558, 2nd Cir. Leon County. Personal injury action arising from debris management site operations. Insured claim. Settlement. Dismissal filed June 6, 2022.

Payton v. Progressive Ins., et al, No. C-92655, 10th JDC, Natchitoches Parish, LA. Automobile accident involving lower-tier subcontractor. Insured claim. Dismissed on summary judgment November 28, 2023.

Fucich v. Great Divide Ins. Co., et al, No. 136124, 16th JDC, Iberia Parish, LA. Automobile accident personal injury claim. DRC dismissed on summary judgment July 27, 2023.

Contreras v. Terrence, et al, No. 18-3519, 134th Dist. Court, Dallas County, TX. Claim by a fourth tier subcontractor for payment. The lawsuit states damages are between $50,000 and $200,000. DRC dismissed from lawsuit on summary judgment on August 12, 2022.

Kessler Smith v. BKS Construction, LLC, et al, Case No. 2021-9256, Orleans Parish CDC Louisiana. Automobile accident case. Insured claim. Dismissed on summary judgment November 2, 2022.

Paulk v. Honeycutt, et al, No. 16-21-900054, Clarke County AL, Automobile accident involving lower-tier subcontractor. Settled and dismissed.

COST PROPOSAL

Items will be used for evaluation purposes only. Quantities are not guaranteed and are used for evaluation purposes only. Prices shall be all-inclusive of requirements as defined in the scope of work. All labor rates are to be fully burdened to include all taxes, benefits, handling charges, overhead, and profits.

ELIGIBLE VEGETATIVE DEBRIS REMOVAL Work consists of the collection of transportation of Eligible Vegetative Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$8.72	3,940,000	$34,356,800.00
16-30 miles	$8.98	500,000	$4,490,000.00
31-60 miles	$9.42	50,000	$471,000.00
61+ miles	$9.98	10,000	$99,800.00

ELIGIBLE C&D DEBRIS REMOVAL Work consists of the collection of transportation of Eligible C&D Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$8.72	50,000	$436,000.00
16-30 miles	$9.12	700,000	$6,384,000.00
31-60 miles	$10.38	700,000	$7,266,000.00
61+ miles	$11.38	50,000	$569,000.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF NON-RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible Non-RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$25.38	10,000	$253,800.00
16-30 miles	$25.68	90,000	$2,311,200.00

31-60 miles	$26.68	90,000	$2,401,200.00
61+ miles	$31.78	10,000	$317,800.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$30.38	10,000	$303,800.00
16-30 miles	$30.68	90,000	$2,761,200.00
31-60 miles	$31.68	90,000	$2,851,200.00
61+ miles	$36.78	10,000	$367,800.00

DDMS SITE MANAGEMENT, OPERATIONS AND REDUCTION Work consists of managing and operating DDMS sites and reducing Eligible disaster debris through grinding or source separation and reduction. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Grinding	$5.82	4,400,000	$25,608,000.00

DDMS SITE MANAGEMENT AND REDUCTION OF VEGETATIVE DEBRIS THROUGH AIR CURTAIN INCINERATORS Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through air curtain incinerators. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$3.78	50,000	$189,000.00

DDMS SITE MANAGEMENT AND REDUCTION OF VEGETATIVE DEBRIS THROUGH CONTROLLED OPEN BURNING Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through controlled open burning. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$2.68	50,000	$134,000.00

HAUL-OUT OF REDUCED ELIGIBLE DEBRIS TO A COUNTY DESIGNATED FINAL DISPOSAL SITE Work consists of loading and transporting reduced Eligible disaster related debris from a City approved DDMS site to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$4.22	100,000	$422,000.00
16-30 miles	$4.52	450,000	$2,034,000.00
31-60 miles	$6.88	450,000	$3,096,000.00
61+ miles	$7.36	120,500	$886,880.00

REMOVAL OF ELIGIBLE HAZARDOUS LEANING TREES AND HANGING LIMBS Work consists of removing Eligible hazardous trees or limbs and placing them on the safest possible location on the ROW for collection under the terms and conditions of Scope of Services, Eligible Vegetative Debris Removal.	Price per Tree	Estimated Total Units	TOTAL
6” to 12” diameter	$125.00	200	$25,000.00
13” to 24” diameter	$175.00	500	$87,500.00
25” to 36” diameter	$250.00	200	$50,000.00
37” to 48” diameter	$225.00	100	$22,500.00
49” and larger diameter	$375.00	50	$18,750.00

REMOVAL OF ELIGIBLE HAZARDOUS STUMPS Work consists of removing Eligible hazardous stumps and transporting resulting debris on the ROW to a City approved DDMS site or City Final Disposal Site. Contractor to backfill all stump holes.	Price per Stump	Estimated Total Units	TOTAL
25" to 36" diameter	$250.00	100	$25,000.00
37" to 48" diameter	$350.00	50	$17,500.00
49" and larger diameter	$400.00	50	$20,000.00

TRANSPORT & DISPOSAL Work consists of the removal, transportation and disposal of Eligible Household Hazardous Waste (HHW). City to designate specific materials to be collected as part of HHW program.	Price per CY	Price Per LB	TOTAL
Cost Per Pound	$750.00	$25.00	$775.00

ELIGIBLE ROW WHITE GOODS DEBRIS REMOVAL Work consists of the removal of Eligible White Goods from the ROW to a designated City approved DDMS Site. Contractor shall be responsible for recovering/disposing refrigerants as required by law as well as unit decontamination in a contained area. The Contractor shall also be responsible for the transportation of Eligible White Goods from the designated County approved DDMS site to an approved designated facility for recycling. Contractor shall record any revenue resulting from recycling efforts as a credit to the City on invoices.	Price per Unit	Estimated Total Units	TOTAL
Refrigerators, freezers, and other items requiring refrigerant recovery and decontamination	$85.00	500	$42,500.00
All other white goods	$50.00	500	$25,000.00
		1000	

ELIGIBLE E-WASTE ITEM REMOVAL Work consists of the recovery and disposal of televisions, computers, computer monitors unless otherwise specified in writing by the City.	Price per Unit	Estimated Total Units	TOTAL
Cost per unit	$30.00	500	$15,000.00

ELIGIBLE DEAD ANIMAL CARCASSES Work consists of the recovery and disposal of dead animal carcasses.	Price per Unit	Estimated Total Units	TOTAL
Small animals less than 100 pounds	$2.00	950	$1,900.00
Large animals more than 101 pounds	$2.00	50	$100.00
		1000	

WATERWAYS DEBRIS REMOVAL Work consists of the removal, transportation and lawful processing and/or disposal of debris collected from waterways and drainage systems to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
Cubic yard	$148.50	10,000	$1,485,000.00

SOIL/SAND/BEACH SCREENING Work consists of the collection of Eligible debris laden sand from City beaches, transportation to a processing screen, processing of sand through a screen, maintenance of sand pile, transportation of sand back to the City beach and shaping sand to final grade	Price per CY	Estimated Total Units	TOTAL
Cubic yard	$29.98	1000	$29,980.00

ANCILLARY EQUIPMENT AND SERVICES

In a post-disaster scenario, access to basic needs such as clean water and electricity is often compromised. DRC will mobilize to procure and distribute items such as water, ice, and generators as needed, under the direction of the City of Destin.

DRC's sister company, SLS, specializes in supplies and logistics for disaster recovery. SLS has a complete management, operations, and logistics team ready at a moment's notice in multiple locations throughout the United States. With expedited response times to any area of the country, the SLS team and services are fully scalable to respond to assignments of any size, nature, and location.

SLS has performed multiple missions that have included bottled water, ice, and/or generator services in response to notable disasters, such as Winter Storm Uri (TX), Hurricane Harvey (TX), Hurricane Ida (LA), Hurricane Ian (FL), Hurricane Michael (FL), and others.

As part of the Sullivan Brothers Family of Companies, DRC and SLS often collaborate on projects. This collaboration expands the scope of services, personnel, equipment, and financial resources available to our clients. One example of DRC's collaboration with SLS includes the provision of emergency supplies and logistics in our response to Hurricane Ida. Together, we provided emergency catering, pallets of water, ice, drinks, potable water, temporary restrooms, laundry trailers, handwashing stations, generators, fuel services, fuel tank with trailer, and office trailers under a $2 million logistics contract with Jefferson Parish, Louisiana.

Temporary Housing

Upon request, DRC and SLS will leverage over a decade of experience in responding to real-world incidents and disaster declarations to provide tested and proven turnkey base camp services to the County that take full advantage of our in-house resources and necessary supplier and vendor relationships in the national, regional, state and local markets. In support of base camp development, DRC and SLS will provide and coordinate the design of the facility in concert with the County to ensure logical, safe, and functional layouts and acceptable personal billeting assignments that fit specific site and mission conditions that ensure complete safety and 24-hour supervision and line of site observation of all occupants. Additionally, we will ensure that the arrangement of showers, toilets and personal care stations are compliant with facility occupant and relevant ADA ratios. All needed supplies, such as electricity, running water, beds, linens, blankets and pillows will be provided.

SLS and DRC's experience and capabilities with the provision of emergency supplies and logistics includes, but is not limited to, the following:

- Emergency power generators
- Temporary satellite communications
- Temporary sanitary facilities
- Reefer and refrigerator container with ice delivery
- Potable water truck and drinking water
- Mobile fleet repair facilities, technicians, and mechanics
- Temporary signage and traffic control
- Mobile food and water distribution site, tents, and furnishings, inclusive of operation and staffing
- Demolition of structures
- Emergency temporary dry-in of facilities
- Temporary security
- Temporary lighting
- Emergency cleaning of stormwater catch basins, culverts and wastewater appurtenances
- Temporary fueling facilities/equipment, inclusive of storage and dispensing
- Rental of various types of equipment (i.e. loaders, dump trucks, etc) with operators
- Temporary fencing
- Materials

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, DRC Emergency Services, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

Signature of Contractor's Authorized Official — Date: 5/5/25

Kristy Fuentes - Vice President, Treasurer, Secretary

Name and Title of Contractor's Authorized Official

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF DESTIN
ANTI-HUMAN TRAFFICKING AFFIDAVIT

DIRECTIONS: *All nongovernmental entities that are or potentially will be contracting, renewing or extending contracts with the City of Destin must have an officer or representative fully execute this affidavit. Note, this is a mandatory requirement of s 787.06(13), Florida Statutes effective July 1, 2024.*

I Kristy Fuentes (insert name) as Vice President, Treasurer, Secretary (insert title) on behalf of DRC Emergency Services, LLC (insert entity name) under penalty of perjury hereby attest as follows:

1. I am over 21 years of age and have personal knowledge of the matters set forth in this affidavit.
2. DRC Emergency Services, LLC (insert entity name) does not use coercion for labor or services as defined in s. 787.06(2)(a), Florida Statutes.
3. More particularly, DRC Emergency Services, LLC (insert entity name) does not participate in any of the following actions:
    a. Using or threatening to use physical force against any person;
    b. Restraining, isolating or confining or threatening to restrain, isolate or confine any person without lawful authority and against her or his will;
    c. Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt or the length and nature of the labor or services are not respectively limited and defined;
    d. Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;
    e. Causing or threatening to cause financial harm to any person;
    f. Enticing or luring any person by fraud or deceit; or
    g. Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03, Florida Statutes to any person for the purpose of exploitation of that person.

(Notary Seal)

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. RFP #25-05-PW

   for Three-Year Prepositioned Contract For Disaster Debris Management Services.

2. This sworn statement is submitted by DRC Emergency Services, LLC
   [name of entity submitting sworn statement]

   whose business address is 111 Veterans Blvd. Suite 1420 Metairie, LA 70005
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 63-1283729

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is Kristy Fuentes and my relationship to
   [please print name of individual signing]

   the entity named above is Vice President, Treasurer, Secretary.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

✓ Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

____ There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

__The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

Destin City Hall
City Clerk
4200 Indian Bayou Trail
Destin, Florida, 32541

Dear City of Destin Selection Committee,

Dynamic Group, LLC is pleased to submit our proposal in response to RFP 25-05-PW Disaster Debris Management Services. We appreciate the opportunity to partner with the City of Destin and are fully committed to performing the required work with excellence, responsiveness, and reliability.

Founded in 2017, Dynamic Group is a large, full-service disaster recovery and construction management firm headquartered in Baton Rouge, Louisiana. We offer a wide range of services including emergency debris removal and disposal, infrastructure restoration, waterway and drainage clearing, and FEMA-compliant documentation. Our team has over 20 years of combined leadership experience and has successfully completed more than 2.3 million cubic yards of debris removal across Louisiana, Mississippi, and other Gulf Coast states.

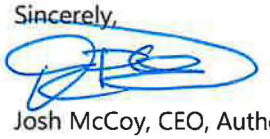
Dynamic Group currently employs a staff of 85 professionals, including executive leadership, project managers, safety officers, and field supervisors. Our personnel are experienced in all phases of disaster recovery, and many hold FEMA NIMS and ICS certifications. More detailed qualifications and resumes are provided in Tab 3 – Experience and Ability.

Our track record of delivering large-scale disaster response contracts is well-documented. We have managed more than $50 million in debris contracts, supporting local governments and federal agencies with rapid deployment, environmental compliance, and full FEMA reimbursement. Specific examples of past performance are provided in Tab 5 – Previous Experience.

Dynamic maintains a robust and scalable workforce, with project managers and senior leadership fully accessible throughout the contract term. Our team has the capacity to respond immediately with full operational support, and our top-level managers, including the CEO and Vice Presidents, remain directly involved in every contract. We have adequate bandwidth and stand ready to prioritize this engagement within our current and upcoming workload.

We believe our proposal is the most effective and beneficial to the City of Destin because of our deep Gulf Coast experience, our proven success with FEMA-reimbursable programs, and our ability to mobilize quickly and perform with precision under emergency conditions. Our commitment to local partnerships, customer service, and quality compliance make us an ideal long-term partner for disaster debris management.
This proposal is submitted in good faith and without collusion. I certify that I have full authority to bind Dynamic Group, LLC to the terms outlined herein. We are enthusiastic about the opportunity to support the City of Destin and are available at your convenience to discuss any aspect of our submission.

Sincerely,



Josh McCoy, CEO, Authorized Signer

EXPERIENCE AND ABILITY

BACKGROUND AND EXPERIENCE

Dynamic Group was established in 2017, with its owner and principal, Josh McCoy, bringing over 20 years of experience serving federal, state, and local agencies. We provide construction management and disaster recovery services with a strong focus on rapid response. Our company is well-equipped to assist clients in both preparing for and responding to emergencies and disasters.

We pride ourselves on mobilizing quickly, ramping up efficiently, and maintaining a high level of service until the work is complete. We have a well-coordinated and experienced team, as well as a fleet of equipment for emergency debris removal that is readily available for mobilization. Our team is dedicated to performing at the highest level of dedication to ensure the success of our response.

We are responsive and agile, with a stable financial foundation, decades of relevant project experience, and direct experience in construction management and debris removal projects.

FINANCIAL STRENGTH & STABILITY

$500 million line of credit
$200 million bonding (aggregate)

Dynamic is fully qualified to assist the City of Destin in in the event of a natural or manmade disaster. With extensive experience in disaster response, debris removal, and infrastructure restoration, Dynamic has successfully managed large-scale recovery operations in the aftermath of hurricanes, tropical storms, and severe flooding events. Our team is equipped to provide rapid mobilization of personnel and equipment to address critical needs such as flood debris removal, road and bridge clearance, infrastructure stabilization, and environmental remediation. Dynamic's expertise in emergency response, permitting, and FEMA-compliant documentation ensures an efficient and fully reimbursable recovery process. Our proven track record in securing federal funding, restoring essential services, and mitigating long-term storm impacts positions us as a reliable partner for The City of Destin in rebuilding stronger, more resilient communities.

EXPERIENCE WITH FEDERAL AND STATE REIMBURSEMENT

EXTENSIVE KNOWLEDGE OF FEMA REIMBURSEMENT GUIDELINES

Dynamic has significant experience delivering federally reimbursed projects. In fact, our federal program experts have successfully **supported over $14.5 billion of federally reimbursed programs** across six states (including Florida), two territories, and dozens of local governments. Our comprehensive federal reimbursement experience spans multiple agencies including the Federal Emergency Management Agency (FEMA), the United States Army Corps of Engineers (USACE), and Housing and Urban Development (HUD).

EMERGENCY TRAINING

Dynamic's expert personnel are certified to provide emergency management training, FEMA National Incident Management System (NIMS) ICS training, and Emergency Operations Center (EOC) training. Kevin Breaux, Director of Emergency Services, previously served as the primary trainers for the Louisiana Governor's Office of Homeland Security and Emergency Preparedness (GOHSEP).

- ICS-100: Introduction to the Incident Command System
- ICS-200: ICS for Single Resources and Initial Action Incidents
- ICS-300: Intermediate ICS for Expanding Incidents
- ICS-400: Advanced ICS for Command and General Staff
- IS-700: National Incident Management System, An Introduction
- IS-800: National Response Framework, An Introduction

Dynamic's debris removal capabilities, extensive federal reimbursement experience, and proven project delivery throughout the unique landscape of Florida, offers the City of Detin an extremely unique and exceptional option to deliver this scope of work efficiently, effectively, and expeditiously.

Our team tailors our robust record-keeping management processes and project controls to fit the specific needs of any project. We aim to execute our project scope successfully and enable the City to respond successfully to any potential audit. We understand that the job is not finished when our scope is complete; we prepare our stakeholders for project closeout. The Dynamic Team has worked through the FEMA regulatory framework at the federal, state, and local levels. Our "Algorithmic Recovery Model" has been vetted during the previous DHS OIG audits, resulting in our clients retaining all their federal grant funding with no recommended de-obligations. Dynamic has successfully performed numberous FEMA Public Assistance funded projects across the country. These projects range from waterway and roadway debris removal to structural reconstruction projects. Our understanding of FEMA PA processes, documentation requirements and oversight allow us to integrate seamlessly with the client, government agency, FEMA and other stakeholders.

EXPERIENCE WITH FEDERAL AND STATE REIMBURSEMENT

FEMA DOCUMENTATION & REIMBURSEMENT

Our approach to document control and management provides transparency, workflow efficiency, reporting and analytical capabilities, and a consistent flow of information among the Dynamic Team, the City, the Debris Monitor and other stakeholders. Dynamic implements processes and procedures to ensure document integrity and standardization of efforts. Our Team will customize a Document Management Plan during the Project planning phase. The Document Management Team will coordinate with the Debris Monitor and other stakeholders to tailor the Plan to ensure documents are properly managed, standardize document control efforts, and improve the quality of documentation and submittals, all while reducing the burden on the client. Our Project Closeout Team will package a record of all work performed, supported by photos, documentation and change logs.

ENSURING FREQUENT AND OPEN LINES OF COMMUNICATION

From daily safety meetings with our crews to up to-the-minute reports all communication is beneficial. We will strive to always confront challenging conversations head on to ensure we do not delay action on issues that may create project bottlenecks.

CONTINUOUS IMPROVEMENT

Dynamic will continuously improve and adapt to overcome project challenges. We are fortunate to have ample experience in similar programs and have learned many lessons which we will incorporate into our execution of this project. We will progressively improve our processes and procedures throughout project execution, continuously enhancing our project performance.

EXPERIENCE WITH FEDERAL AND STATE REIMBURSEMENT

ACCOUNTING SYSTEM/INVOICING PROGRAM

1. Subcontractors submit invoices per payment terms through admin@dynamicgrp.com with relevant information in subject line of email.
2. Dynamic's Invoice Management Team reviews invoices through admin inboxes and forwards invoice to project manager to review scope of work against invoice received.
3. Once invoices are reviewed and approved by project manager, invoices are forwarded to Project Controls for QA and QC.
4. Project Controls review invoices to agreed contract terms and forwards to Accounts Payable.
5. Financial team reviews invoices and process for payment within the agreeable contract terms.

Dynamic understands the role of accounting and internal controls is an essential part of accepting government supplied grant money. This funding requires a fiscal accounting system that can track specific projects, prepare for and undergo audit, and be used to evaluate appeals. Detailed records maintenance is paramount to verifying the money is used for eligible work, the work is complete, the work complies with regulations and project-specific requirements. For example, FEMA requires review of all submitted costs and audits any discrepancies betweeen funding amounts and invoices submitted.

Our team understands the urgency of maintaining continuous operations with documented policies and procedures, written plans, schedules and an approved invoicing program to execute work in an efficient and effective manner. We utilize a financial database program called COMPUTER EASE, which allows Dynamic to track invoices, accounts receivable, accounts payable, job costing, general ledger and purchasing. As required by 2 CFR 200.302(b)(3), costs incurred under a grant must be supported by "source documentation," such as invoices, receipts, bills, online transaction confirmations, and other items. In addition to recording financial transactions in our accounting system, Dynamic maintains records that support individual transactions, which are cross-referenced to accounting entries and maintained in a filing system.

Dynamic plans to invoice in accordance with the contract terms and conditions. Our team understands that this invoicing program may be adjusted and will be reflective of the terms, provisions, and conditions of the contract. Dynamic will ensure the invoicing plan is implemented accordingly and properly executed.

CERTIFICATIONS

DYNAMIC'S NIMS TRAINING & CERTIFICATION

Dynamic Group, LLC maintains a comprehensive program to ensure all key personnel are trained and certified in the National Incident Management System (NIMS) in accordance with FEMA guidelines. Staff involved in emergency response and disaster recovery operations are required to complete NIMS courses appropriate to their roles, including IS-100, IS-200, IS-700, and IS-800, with additional advanced training provided as needed. The company regularly reviews and updates its training protocols to stay aligned with federal, state, and local emergency management requirements. Training records are maintained internally and available for review upon request to ensure compliance and readiness during deployment.

The company maintains a central training database to track certifications, monitor renewal dates, and ensure full compliance across all deployed teams. Internal audits are conducted annually to verify staff credentials, evaluate training effectiveness, and update course requirements in line with evolving federal, state, and local standards. Dynamic also participates in regional emergency preparedness exercises and collaborates with public sector partners to align internal protocols with jurisdictional emergency operations plans. All training documentation and certifications are available for client review upon request.

DOCUMENT MANAGEMENT BEST PRACTICES

By the close of business each day of the contract, the Project Manager will submit a report with the following information (at minimum):

- Contract number
- Daily and cumulative hours for each piece of equipment and personnel
- By unit cost or daily and cumulative CY removed

The Dynamic Team reconciles all units of work daily, thereby reducing the occurrence of erroneous or disputed data later in the project, and commits to the following:

- Maintenance of recovery process documents
- Preparation of written and oral status reports as requested by the City
- Assistance with claim document preparation as required by the NRCS EWP and FEMA PA Programs for submission.

The certifications held by our supervisory personnel are listed on their resumes.

LEVERAGING LOCAL RESOURCES

Dynamic recognizes the importance of utilizing local labor during debris removal and recovery efforts. Dynamic is committed to leveraging local talent and manpower as this approach not only stimulates the local economy but also ensures quick response times and community investment in the recovery process. We have developed a comprehensive plan that focuses on partnering with local businesses, hiring local workers, and utilizing local equipment. This approach ensures that we have the necessary resources and expertise from the local community to efficiently and effectively carry out the required tasks.

In order to involve local labor, Dynamic actively seeks partnerships with local businesses and organizations. We prioritize working with minority-owned businesses, women-owned businesses, and local small businesses. These partnerships not only provide us with access to local labor but also contribute to the economic growth and development of the community.

When it comes to hiring local workers, Dynamic actively recruits and trains individuals from the local community. We believe in providing employment opportunities to local residents, as they have a vested interest in the recovery and rebuilding process. By hiring local workers, we ensure that they are familiar with the area, its unique challenges, and can contribute their knowledge and expertise to the project.

Additionally, Dynamic understands the importance of utilizing local equipment. We work closely with local equipment suppliers and contractors to ensure that we have access to the necessary machinery and tools. This not only supports local businesses but also ensures that we have the right equipment for the job, tailored to the specific needs of the project.

By involving local labor, Dynamic aims to create a sense of ownership and pride within the community. We believe that local workers have a deep understanding of the area and its needs, which translates into a more efficient and effective recovery process. Furthermore, by hiring local workers, we contribute to the local economy, supporting families and businesses in the community.

In conclusion, Dynamic is committed to training and utilizing local labor during debris removal and recovery efforts. We prioritize partnerships with local businesses, hiring local workers, and utilizing local equipment. By involving the local community, we aim to contribute to the economic growth and development of the area while ensuring a timely and successful recovery process.

YEARS OF EXPERIENCE:

20 Years

Project Role

Mr. McCoy serves as the Executive Sponsor for Dynamic Group, LLC, where he is responsible for the overall planning and execution of projects. Mr. McCoy plays a critical leadership role in overseeing project startup, stakeholder engagement, compliance monitoring, and successful closeout. He ensures the project is strategically aligned with client objectives and regulatory requirements while fostering open communication and accountability at every level of execution.

Summary of Experience

Mr. McCoy is the founder and owner of Dynamic Group, LLC, bringing over two decades of hands-on experience in disaster recovery, emergency response, and construction management. Under his leadership, Dynamic has become a trusted provider of FEMA-compliant debris removal and infrastructure support services across Louisiana. Josh plays an active role in all phases of project execution—from strategic planning and resource coordination to on-the-ground operations and compliance oversight. His deep understanding of regulatory requirements, local environmental challenges, and logistical execution ensures that projects are delivered with speed, safety, and precision. Known for his collaborative leadership style and commitment to excellence, Josh has guided Dynamic through numerous high-stakes recovery efforts, consistently achieving client goals while strengthening community resilience.

Relevant Experience

West Feliciana Parish Debris Removal & Disposal

Mr. McCoy is leading oversight of the management and removal of debris following severe tornadoes in April 2024. Previously, Mr. McCoy managed the response to 2019 flooding with sand, silt and waterway debris removal.

Lafayette Maintenance, Drainage & Dredging

Mr. McCoy served as Project Execution Lead overseeing maintenance and drainage of several canals and coulees in Lafayette Parish. Mr. McCoy was responsible for overall program oversight, including but not limited to client relations, team leadership, production management, quality and contract management. Mr. McCoy's team has successfully completed 8 maintenance and drainage contracts with Lafayette Consolidated Government since 2019.

Project Role

Mr. Bankston serves as Vice President of Debris Removal at Dynamic Group. He oversees large-scale debris removal operations and leads strategic initiatives to expand the firm's emergency management footprint. With nearly two decades of experience in disaster recovery, Mr. Bankston is responsible for securing new contracts, managing key client relationships, and ensuring project execution aligns with federal, state, and local compliance standards. His leadership spans operations, planning, logistics, and field coordination across disaster events nationwide.

Summary of Experience

Mr. Bankston brings over 18 years of experience in the disaster recovery industry with a specialization in debris removal, demolition, and hazardous waste management. His career includes major storm response efforts across the Gulf Coast and Eastern U.S., including projects for Hurricanes Katrina, Gustav, Isaac, Harvey, Michael, Florence, and Sandy, as well as numerous tornado and ice storm responses. Mr. Bankston has managed operations involving millions of cubic yards of debris, dozens of Temporary Disposal Sites (TDS), and extensive coordination with FEMA and state emergency agencies.

Relevant Experience

Project Manager - St. Bernard Parish after Hurricane Katrina
the largest FEMA-funded demolition project in U.S. history, managing the demolition of over 8,000 structures and more than 13.7 million square feet of damaged property, including 1 million CY of asbestos-containing debris.

Project Manager - Hurricane Gustav 2008 - Multiple Parishes
Managed 15 Temporary disposal sites concurrently and oversaw the collection, storage, and disposal of 3,500,000 CY of storm debris.

Project Manager - Hurricane Isaac 2012
Multiple activations managed in southern regions of Louisiana. Collection, management, and disposal of almost 500,000 CY of storm debris. Located, permitted, and managed 6 temporary disposal sites.

Project Manager - Severe Flooding 2016
Louisiana: East Baton Rouge parish, Ascension Parish, Tangipahoa Parish, Lafayette Parish, St. Martin Parish, City of Baker, Assumption Parish, Iberville Parish, City of St. Gabriel.– Multiple weather events that caused widespread flooding in Texas and Louisiana. 2,800,000 CY of flood debris collected, managed, and disposed.

Project Manager - Hurricane Harvey 2017
Texas: Texas GLO, Waller County, Harris County, Jefferson County, Port of Corpus Christi, Cities of Aransas Pass, Groves, Cleveland, Bellaire, Humble, Nederland, Port Aransas, Houston, Jacinto, Port Arthur, Piney Point Village, Port Neches, and Texas City.– One of the worst flood events in history yielded the collection, management, and disposal of 2,159, 500 CY of flood debris. Simultaneously operated 30 temporary disposal sites.

Summary of Experience

Mr. Watkins has over 30 years of experience in leadership, management, and operations. Mr. Watkins has been a key figure in the emergency response and recovery industry, bringing extensive expertise in disaster management, debris removal, and large-scale recovery operations. His introduction to the field began with managing and successfully closing out a $78 million project as part of the BP Oil Spill Response, where he navigated complex logistics, environmental compliance, and stakeholder coordination to ensure an efficient and accountable recovery process.

Over the years, Mr. Watkins has played an integral role in planning, executing, and closing out emergency response projects across a range of disasters, including hurricanes, tornadoes, ice-storms, and other catastrophic events. His experience spans all phases of emergency response—from initial damage assessment and debris management to long-term recovery and infrastructure restoration.

Relevant Experience

Hurricane Ian (2022) – Debris Removal & Infrastructure Protection

During the response to Hurricane Michael, Mr. Watkins was instrumental in leading debris management operations that prioritized critical infrastructure protection and public safety. He oversaw the segregation and removal of storm debris, including downed trees, hazardous materials, and construction-related waste. His expertise in FEMA debris monitoring and contractor oversight ensured a cost-effective, compliant, and efficient cleanup operation. Through his strategic leadership, the team successfully restored accessibility to roadways, managed temporary debris sites, and expedited recovery efforts across the impacted regions.

Hurricanes Laura & Zeta
(2020) – Disaster Debris Cleanup & Compliance Oversight

For Hurricanes Laura and Zeta, Mr. Watkins managed widespread debris removal efforts, focusing on hazardous material disposal, vegetative debris clearance, and structural debris removal. His role included ensuring logistical efficiency, adherence to FEMA regulations, and coordination with monitoring teams to verify compliance. By leveraging his experience in large-scale disaster operations and construction site management, he helped optimize the allocation of resources, establish debris staging sites, and implement safety protocols to minimize environmental impact and maintain operational integrity.

JAMES EVANS

HEALTH AND SAFETY MANAGER

EDUCATION & CERTIFICATION

30hr Project Supervision Course for MHIA

TWIC Card

OSHA 30 certification

USACE Construction Quality Management for Contractors

YEARS OF EXPERIENCE:

15 Years

Project Role

Mr. Evans will serve as the onsite Health & Safety Manager for the Project overseeing subcontractors and ensuring quality standards are maintained. In addition, he will work in coordination with the Project Manager to meet schedule milestones and adhere to contractual requirements.

Summary of Experience

Mr. Evans is an execution-driven, construction and project management professional experienced in construction management. He offers more than 15 years of construction oversight experience with commercial and institutional projects, including military projects, schools, and other governmental projects. Mr. Evans delivers strategies to ensure transparency, scalability, continuity, and ongoing support for clients. Over the course of his career, he has honed his ability to continuously identify alternatives and solutions to reduce costs and meet evolving stakeholder requirements.

Relevant Experience

West Feliciana Parish Debris Removal & Disposal

Mr. Evans is responsible for meeting scheduling milestones and adherence to contractual compliance. His responsibilities include subcontractor and crew management, production management, and quality control. Mr. Evans provided keen oversight to ensure program standards and goals were met.

Debris Removal Management for Hurricane Maria Recovery, Puerto Rico

Mr. Evans led a team of 8 supervisors and 70 crews to respond to Hurricane Maria in Puerto Rico. He procured the required trucks and equipment to ensure timelines and goals were met. Mr. Evans established and maintained relationships with third parties and vendors. He created and maintained comprehensive project documentation.

DUSTY WALKER

OPERATIONS MANAGER

EDUCATION & CERTIFICATION

USACE Construction Quality Management for Contractors

YEARS OF EXPERIENCE:

18 Years

Project Role

Mr. Walker will serve as Operations Manager for the project providing guidance and technical support to ensure quality standards and sound environmental practices are met. In addition, he will work in coordination with the Project Manager to meet schedule milestones and adhere to contractual requirements.

Summary of Experience

Mr. Walker brings 18 years of civil construction and debris removal experience to this project. In addition to managing his own disposal management site (DMS) in Louisiana, he has experience working with numerous parishes and counties across the southern states in support of disaster recovery efforts. Mr. Walker's core strengths include project and construction management, scheduling, logistics, and developing scopes for safe and efficient disposal. His extensive debris removal and disposal knowledge has facilitated rapid recovery in many communities.

Relevant Experience

Hurricane Michael Debris Removal, Florida

Mr. Walker provided oversight for five DMS locations following Hurricane Michael. Mr. Walker was involved in the initial land assessment and site development for disposal. Mr. Walker provided oversight for the construction of site towers and roads, contributed vastly to the scope development for disposal and the onsite traffic safety plans. At peak, he was responsible for 25 employees, working seven days a week to ensure a rapid recovery for the communities that were affected.

Hurricanes Laura & Delta Debris Removal, Cameron Parish

Mr. Walker provided leadership and guidance for the removal of damaged transmissions and powerlines in the marshland around Cameron Parish. Mr. Walker contributed to the scope development for the debris removal within the harsh terrains through a multi-step debris removal process that maximized operational efficiency.

CHRIS WHITTINGTON
FIELD SUPERVISOR

EDUCATION & CERTIFICATION

West Jones High School 1994

YEARS OF EXPERIENCE:

15 Years

Project Role

Mr. Whittington will serve as Field Supervisor overseeing critical aspects of the project. He will provide on-site safety, planning, quality control, and manage all logistics, including access roads and staging areas to ensure optimal efficiency and minimize disruptions. Mr. Whittington primary objective is to guarantee that the project advances securely, effectively, and in accordance with all relevant regulations and industry standards.

Summary of Experience

Mr. Whittington is a highly experience and dedicated superintendent with a proven track record in the field of construction and land development. He has 15 years of experience managing site clearing, excavation, material management, and pipeline installation. Mr. Whittington's ability to manage complex projects, ensure safety compliance, and deliver results within budget constraints has aligned project goals with execution.

Relevant Experience

Sharkey County, Mississippi Debris Removal

Mr. Whittington led disaster response and debris management efforts in Sharkey County and the City of Rolling Fork following the devastating EF4 tornado. Working closely with the project managers, Mr. Whittington conducted damage assessments and collaborated with the local, state, and federal stakeholders to create efficient debris removal plans. He oversaw the registration of pre-mobilized equipment and establishment of Debris Management Site, ensuring safety and compliance throughout the operations. In total, Dynamic team removed 8,977 loads of vegetative and construction debris, totally 447,520 cy, demonstrating swift and effective action to aid in the community's recovery.

Humphreys County, Mississippi Debris Removal

Mr. Whittington directed debris management operations to address the significant impact of the tornado in Humphreys County and Silver City. He coordinated the hauling of 1,337 loads of mixed vegetative and construction debris, totaling 161,104 cubic yards, while managing logistics, material flow, and disposal processes. By maintaining clear communication with stakeholders and adapting to evolving challenges, Mr. Whittington ensured efficient project execution. Rapid response and commitment to safety and quality were instrumental in helping these communities begin rebuilding.

West Shore Lake Pontchartrain (WSLP) Hurricane and Storm Reduction Project

Mr. Whittington oversaw daily all field activities to ensure compliance with project specifications and safety standards. He supervised the construction of approximately 12,700 linear feet of levee, which includes site preparation, such as clearing and grubbing 131 acres, and monitoring the excavation of drainage channels. Mr. Whittington worked closely with field crews and subcontractors to maintain productivity and quality while ensuring all activities align with environmental and safety guidelines. His on-site leadership and addressed field-level challenges that contributed to the successful execution of the risk reduction project.

Mr. Mahler will serve as crew leader and remain on site to manage crews, prioritize work tasks, and execute schedules. He will maximize production capacity while maintaining safe and efficient practices to ensure contract compliance. Mr. Mahler will ensure quality construction standards are maintained throughout the Project.

Summary of Experience

Mr. Mahler is an adapt leader with experience leading large crews during disaster recovery efforts. He has successful led large fields crews to reconstruct over 300 homes after the Great Flood of 2016 and has continuously led efforts following recent natural disasters, including Hurricanes Laura, Delta, and Ida. He is strategic in efficient coordination of labor, sourcing materials, and managing field crews and subcontractors to deliver successful project completion. Mr. Mahler's extensive background in debris removal and construction and his commitment to provide exceptional leadership to the crew will be a strength on this project.

Relevant Experience

Project Manager | Hurricane Ida South Lafourche Levee District
September 2021 - October 2021
Mr. Mahler provided oversight for the emergency levee debris removal following Hurricane Ida. Within 24 hours of receiving the NTP, a complete preliminary inspection of the entire SLLD levee system was completed along with detailed project scope development. Mr. Mahler coordinated all efforts of debris removal, transportation, and disposal of loose vegetative debris, demolition debris, piling and trees from designated areas with a minimum of three crews daily as well as additional crews on standby. With the understanding of time sensitive emergency projects, Mr. Mahler's development of strategic procedures facilitates efficiency at disposal sites. He also ensured essential communication with the client by securing water transportation for progress monitoring. Morganza Interim Levee Improvements.

North Lafourche Levee District
Mr. Mahler provided oversight and leadership for the levee improvement project. This project consisted of rehabilitating 19,300 linear feet of existing levee to grade elevation, offsetting the extreme deterioration of coastal marshes in southern Lafourche Parish.

Baton Rouge Community College, Social Sciences

Completed over 60 NIMS, FEMA and ICS courses

Certified in six disaster response courses through the American Red Cross, including Disaster Action Team response, sheltering and communications

RECOGNITION

GOHSEP Outstanding Performance Recognition Award 2016, 2017, 2019

GOHSEP 5 Years of Service Award 2019

Emergency Service Award 2018

YEARS OF EXPERIENCE:

20 Years

Project Role

Mr. Hamilton plans, sources and procures all required materials for construction and execution of the Project. He oversees the logistics supply chain and makes necessary corrections to fulfill the requirements with a focus on sourcing the most cost-effective yet high quality materials needed. Mr. Hamilton is responsible for shipping and transport of materials and supplies from vendors to the Project site.

Summary of Experience

Mr. Hamilton is an experienced professional with extensive knowledge in emergency management and disaster response, specializing in coordination and logistics among local, state and federal agencies. His experience as a planner, branch manager and section chief has increased his toolkit and ability to rapidly react, procure, manage and deliver on a multitude of logistics requirements.

Relevant Experience

West Feliciana Parish Debris Removal & Disposal

Mr. Hamilton procured all required materials for execution of the Project. The project site proved to be an obstacle due to it being extremely limited by way of standard vehicles; therefore, coordination of personnel and maintenance schedules was vital for efficiently removing debris from waterways. Mr. Hamilton monitored the Mississippi River levels daily to ensure safe and effective delivery of all barges, equipment, and materials. Mr. Hamilton stabilized the supply chain to meet all requirements and adhere to West Feliciana Parish's guidelines.

Senior Logistics Officer | Louisiana Governor's Office of Homeland Security and Emergency Preparedness

Mr. Hamilton conducted logistical operations for over 150 disasters affecting the State of Louisiana over a six year period, encompassing natural, man-made, technological, biological, HAZMAT and terrorist-related disasters. He maintained the State's inventory of emergency supplies and created standard operating procedures for commodities distribution.

Customer Service & Communication

Disaster Recovery Expertise

Project Communication & Coordination

Adaptability & Crisis Management

Leadership & Team Collaboration

YEARS OF EXPERIENCE:

30 Years

Project Role

Mr. Crosby will serve as Customer Service Representative and liaison for the City of Destin. His role will center on serving as the customer service point of contact between the City, stakeholders, and affected residents to ensure smooth communication and resolutions of concerns. He will assist by providing clear guidance on debris removal processes, addressing inquiries, and resolving any matter promptly and professionally.

Summary of Experience

Mr. Crosby brings over 30 years of extensive experience in governmental affairs, disaster response, logistics management and the inland and offshore Oil & Gas sector. He excels in building and maintaining relationships with local, state, and federal governments, particularly in disaster recovery efforts. His expertise includes navigating FEMA-related processes, coordinating emergency responses for hurricanes and tornadoes, and managing CDBG projects. Mr. Crosby have a proven ability to lead large-scale operations, broker equipment for inland and international projects, and offer strategic solutions for complex challenges. His accomplishments include spearheading post-disaster recovery efforts for Hurricane Laura, Zeta, and Ida, growing revenue streams in the maritime industry, and implementing innovative solutions for logistical and operational challenges.

Relevant Experience

Plaquemines Parish Emergency Debris Removal and Disposal
Mr. Crosby managed all public inquiries, coordinated community outreach efforts, and addressed homeowner concerns during large-scale debris removal operations following natural disasters such as hurricanes and tornadoes. Leveraging his extensive background in emergency management, he worked diligently to maintain high levels of client satisfaction while ensuring projects comply with federal guidelines and local ordinances. Mr. Crosby's ability to adapt to challenging circumstances, such as post-storm resource constraints and high-pressure environments, has solidified his reputation as a trusted and dependable representative in the field of disaster recovery.

South Lafourche Levee District Emergency Debris Removal
Mr. Crosby supported South Lafourche Levee District Emergency Debris Removal projects as customer service representative. His understanding of FEMA-related processes and his collaboration with local, state, and federal officials was instrumental in ensuring the success of this disaster recovery operations. Mr. Crosby ensured transparent communication, timely updates, and resolution of concerns throughout the project's lifecycle. His knowledge of disaster response and recovery process and experience with debris management and removal operations was crucial between South Lafourche, stakeholders, and the operational team.

  Public Works Director
  Plaquemines Parish
  (504) 912-5970

Project Description

Plaquemines Parish faces extreme risk for hurricanes, flooding, tornadoes, and other severe weather events. In June 2021, the parish solicited a standby contract for comprehensive debris removal services, including equipment, labor, and disposition sites required after an emergency incident.

Despite competing against a well-entrenched incumbent and other national debris removal industry leaders, Dynamic was awarded the contract based on exceptional past performance, responsiveness, and overall debris removal capabilities. The contract requires rapid response and stringent terms to ensure cost effectiveness, environmental compliance, federal program eligibility, and protect the public immediately after a catastrophic event.

In August 2021, Category 4 Hurricane Ida decimated large swathes, and the Parish activated Dynamic's contract. Dynamic immediately mobilized and began debris removal operations within 48 hours of Notice to Proceed. Our team provided debris removal and associated operational oversight for a wide range of debris, including construction and demolition (C&D), vegetative, tires, and white goods within the rights-of-way, including streets, canals, and levees on both sides of the Mississippi River.

Operational challenges included large quantities of organic marsh grass displaced on top of the critical levee systems, requiring sensitive debris removal operations to ensure the levees were not damaged or compromised. Further, the large marsh grass volume would have overwhelmed local landfills. Dynamic developed an innovative solution that entailed leasing local land as a staging area, allowing the grass to dry and decompose naturally. This solution saved both landfill capacity and complied with stringent environmental requirements while reducing disposition costs to the Parish.

Despite these challenges, in less than 3 months, Dynamic removed a total of 549,073 CY of debris in an expeditious and compliant manner.

SOUTH LAFOURCHE LEVEE DISTRICT EMERGENCY DEBRIS REMOVAL

- **Client:**
  South Lafourche Levee District
- **Incident:**
  Hurricane Ida (2021), DR-4611-LA

  September 2021 - February 2022
- **Reference:**
  Nickolas Matherne, Executive Director
  South Lafourche Levee District
  (985) 632-7554

Project Description:

South Lafourche is a coastal community along the Gulf of Mexico vital to Louisiana's seafood industry yet vulnerable to strong winds and high storm surges.

August of 2021, a category 4 Hurricane Ida tore through this community, damaging homes and businesses and littering the levees with 2.5 – 5 feet of vegetative and C&D debris. Dynamic served as prime contractor responsible for the emergency debris removal from critical designated points on the levee.

With utmost urgency to aid the recovery and prevent further storm damage, Dynamic swiftly deployed resources and personnel. At peak, more than 20 crews were actively working 12-hour days, seven days a week with over 50 pieces of debris removal equipment. Our site superintendent and project manager worked in close proximity with the client's team to successfully clear 158,813.6 CY of vegetative debris from designated levees and another 130,772 CY of other debris. The debris was methodically sorted and disposed of with consideration for the environmental impact on local communities.

Dynamic recognizes the challenges that this community will continue to face during hurricane seasons following significant storm damage. Our team understands what is needed to facilitate a full recovery, including emergency debris removal and restoring the levee's integrity. With extensive experience working within FEMA requirements to efficiently complete the scope of work, Dynamic's contribution to the resiliency and recovery of this local community and the South Lafourche Levee District will remain a priority.

  West Feliciana Parish
  (225) 635-3864

Project Description

2024 Tornado Debris Removal

In April 2024, an F1 tornado struck West Feliciana Parish, causing extensive damage, destroying mature trees, and generating large quantities of vegetative debris.

Dynamic proactively coordinated with the parish and established an onsite management team immediately following the tornado. Our Project Manager Kevin Breaux was onsite two days prior to NTP to help the parish create an operational plan, including an outreach program to notify citizens of scheduled routes to organize and expedite debris for roadside pickup in a timely manner. Dynamic also supported the parish's public broadcast and social media communications efforts.

At NTP, Dynamic's crews and equipment were already on site to begin working immediately. Within 10 days, we collected more than 80,000 cubic yards of debris. Dynamic's approach was to deploy large-scale equipment, including six double-loader trucks each with a 120 cubic yard capacity. We established a vegetative debris management site to incinerate the debris for final disposal.

2019 Sand, Silt and Waterway Debris Removal

In response to the 2019 flood, West Feliciana Parish sought emergency services to clear, haul and dispose of debris. To address the remote location and limited access via vehicles, Dynamic leased camps and positioned a 26-man housing barge on a waterway inlet. Land use agreements were secured with local property owners to facilitate access, utility connections, and material staging areas Marine shipping barges were contracted to deliver and offload the initial heavy equipment and road repair materials.

Project personnel remained onsite throughout the project while working feverishly to repair roads. Once access was cleared, additional articulating dump trucks and excavation equipment were mobilized. Dynamic cleaned approximately 1,000 linear feet of debris and silt from Lower Polly Creek to the Mississippi River and removed silt from the 100,000 linear feet of drainage along Cat Island Road.

LAFAYETTE PARISH MAINTENANCE DRAINAGE DREDGING

- **Client**
  Lafayette Consolidated Government
- **Funding**
  Local Government Maintenance Funds
- **Cubic Yards of Debris Removed**
  427,800 CY of debris and 11,000 trees along canals
- **Dynamic's Scope of Services**
  Clearing, grubbing, and dredging maintenance. Performed cleaning at an average rate of 1,500 feet per day. In total, cleaning and maintaining over 25,000 feet.
- **Contract Value**
  $6.5 million (nine projects completed, one project ongoing)
- **Period of Performance**
  2021 - Current
- **Reference**
  John Vallot
  Project Manager
  Lafayette Consolidated Government
  (337) 291-5683

Project Description

Drainage maintenance plays a vital role in keeping drainage systems in Lafayette Parish functioning properly and preventing issues such as blockages and flooding. In addition to regular inspections, cleaning, and repairs, Lafayette prioritizes the removal of debris from canals.

Canals are essential components of drainage systems as they help carry water away from properties and prevent waterlogging. However, over time, canals can accumulate debris such as leaves, branches, trash, and sediment. This debris can obstruct the flow of water, leading to blockages and reduced drainage capacity.

Removing debris from Lafayette's canals is crucial to ensure the efficient flow of water and prevent potential drainage problems. It requires specialized equipment and skilled professionals who are trained in canal cleaning techniques.

Since 2017, Dynamic has been selected by the Lafayette Consolidated Government to perform clearing, grubbing, and dredging maintenance. Across 10 projects, our average cleaning rate has been an impressive 1,500 linear feet per day. In total, Dynamic has cleaned and maintained over 318,000 feet and removed over 427,800 cubic yards of debris and 11,000 trees along canals. All projects have been completed ahead of schedule.

Lafayette's investment in canal maintenance has led to numerous benefits, including preventing waterway blockages, improving drainage, reducing the risk of flooding, and maintaining a healthy ecosystem. Dynamic is grateful to serve as a partner to the City and contribute to the maintenance and improvements of Lafayette's waterways.

MISSISSIPPI DEBRIS REMOVAL 2023

- **Client**
  City of Rolling Fork, Sharkey County, and Humphreys County
- **Incident**
  DR-4697
- **Federal Funding Program**
  FEMA Public Assistance (PA), Category A Debris Removal

  Debris removal and management including the equipment and manpower required to clear and dispose of eligible vegetative and construction debris from rights-of-way and eligible levees, canals, and roadways.
- **Contract Value**
  $10,444,727
- **Period of Performance**
  March 2023 – August 2023
- **Reference**
  Mayor Eldridg Walker
  City of Rolling Fork, MS
  Phone (662) 907-0403

Project Description:

On March 23, 2023, a catastrophic EF4 tornado with winds reaching 170 mph devastated communities across Mississippi and neighboring states. The devastating storm ravaged multiple municipalities across the state and generated massive quantities of debris. The H&S Dynamic Team arrived in Sharkey County the day immediately after the tornado to offer our extensive expertise in disaster response and debris management. Our project managers arrived on site following the incident to conduct comprehensive damage assessments. We worked collaboratively with local, state, and federal stakeholders to develop a plan for safely, swiftly, and efficiently clearing debris from affected areas.

Immediately upon Notice to Proceed, the H&S Dynamic Team worked with the debris monitoring firm to register our pre-mobilized equipment, ensuring a rapid response. We also worked diligently to secure multiple debris management sites (DMS) and final disposal sites.

Overall, our team managed over 600,000 cubic yards of debris within the most impacted municipalities. In Sharkey County and the City of Rolling Fork, the H&S Dynamic team removed 8,977 loads of vegetative and C&D debris, totaling 447,520 cubic yards. In nearby Humphreys County and Silver City, our team hauled 1,337 loads of mixed vegetative and C&D debris, totaling 161,104 cubic yards.

These contracts were activated simultaneously, exemplifying our commitment to delivering efficient solutions. Local officials and stakeholders have expressed sincere appreciation for our unwavering support and expeditious actions to remove debris and help the communities start rebuilding.

SUBCONTRACTORS

The City of Destin, situated in a region prone to natural disasters, requires an efficient, reliable, and scalable debris removal and disaster recovery solution. In alignment with the City's needs, our team understands that timely and effective recovery efforts are essential to restore the community's safety, well-being, and functionality in the aftermath of a disaster. The City's expectations for comprehensive debris removal services, emphasizing the importance of both immediate response capabilities and long-term recovery planning.

Dynamic addresses these needs by leveraging a robust network of resources, skilled subcontractors, and state-of-the-art technology. With our vast experience in disaster recovery and debris removal, we are committed to supporting the St. Bernard City through a strategic partnership with industry-leading subcontractors. Our team brings together a diverse range of expertise, with a proven track record in large-scale disaster recovery operations. Our team has the personnel, equipment, and expertise to not only meet but exceed the City's expectations. Whether responding to an immediate disaster or conducting long-term recovery, we are fully equipped to ensure that debris removal operations are conducted swiftly, safely, and in compliance with FEMA guidelines and local regulations. Our team is committed to supporting the City through every stage of the recovery process, from pre-planning and analysis through to full-scale execution, ensuring minimal disruption to the community and a quick path to recovery.

ZEIGLER TREE AND TIMBER COMPANY

With over 25 years' experience, Zeigler Tree and Timber Company is a family operated company that has been recognized as a leader in all tree care services, while specializing in tree removal, pruning, and stump grinding. Their mission is to provide clients with high-end tree removal at a very competitive price. Their focus on customer satisfaction, quality of work, attention to detail and utilizing the safest procedures and newest technologies is what has made Zeigler a powerhouse of tree work. They pride themselves on treating every home and business like it is their own, assuring their clients a safe and reliable experience when choosing Zeigler.

SCOPE OF WORK
DEBRIS REMOVAL

VEGETATIVE MANAGEMENT SERVICES

Vegetation Management Services, LLC (VMS) is a leading provider of forestry mulching, land clearing, debris removal, and disaster recovery services. Established in 1997 and incorporated in 1999, VMS has successfully executed numerous state and federal contracts nationwide, delivering high-quality and cost-effective solutions. Utilizing state-of-the-art equipment, including skid-steers, excavators, and large forestry mulching machines, VMS ensures efficient vegetation management and land clearing. The company also specializes in debris cleanup following natural disasters such as hurricanes and tornadoes. VMS has access to an extensive network of equipment and manpower, enabling rapid response to disasters of any scale. As a certified HUBZone, Woman-Owned Small Business (WOSB), and Veteran- Owned Business, VMS remains committed to excellence, resilience, and supporting communities in times of need.

SCOPE OF WORK
DEBRIS REMOVAL

LEADERSHIP ADVISORY PANEL

JIMMIE MCCOY

- 40 years of civil construction and disaster recovery experience
- Served on numerous committees as Chairman of Livingston Parish Coucil
- Served as a supervisor of Department of Wildlife and Fisheries for over 20 years
- Highly skilled in city planning, economic development, and personnel management as well as possesses strong concepts of all State and Federal laws and regulations

COLONEL PAUL RAINWATER (R)

- Served in numerous government roles over the past 30 years distinguishing him in the political arena as one of the most experienced professionals in disaster recovery funding
- Responsible for the appropriation of over $14 billion in FEMA and HUD programs a proved for the State of Louisiana after Hurricanes Katrina, Rita, Gustav, and Ike
- Certified Local Government Manager and a veteran who served U.S. Senator Mary Landrieu's office and Governor Jindal's administration

MAJOR GENERAL DAVID BALDWIN

- Highly skilled in emergency management and disaster response.
- Served as commander of the California National Guard, the largest, most tasked National Guard force in the US, with an authorized strength of 23,000 personnel.
- Education includes BS from Stanford University, a Masters in Public Administration, and a Master of Strategic Studies from the United States Army War College.
- Awarded the President of Ukraine's Order of Merit Second Class for Distinguished Service.

CONTRACTUAL OBLIGATIONS

MANAGING MULTIPLE ACTIVATIONS ACROSS FLORIDA AND ALABAMA

Our approach to managing multiple debris management contracts across Florida and Alabama is grounded in strategic resource deployment, scalable operations, and robust communication systems. We operate under a centralized command structure supported by project managers who provide localized oversight and rapid response capabilities. These managers lead contract-specific teams composed of trained field staff, qualified subcontractors, and appropriate equipment tailored to each project's needs.

To ensure the City of Destin receives priority service, we utilize a tiered resource allocation model that allows immediate mobilization in the event of a disaster. Our scalable framework enables the swift reallocation of personnel, subcontractors, and equipment from unaffected areas, supported by a reserve fleet and trained response teams ready to meet increased demands.

Effective communication is central to our operations. We use advanced project management software for real-time tracking, resource planning, and contract compliance monitoring. Daily coordination with project managers ensures alignment across all active projects, while our 24/7 operations center facilitates ongoing communication between field teams and local officials.

With a proven history of successfully managing concurrent contracts, we are fully equipped to deliver uninterrupted, high-quality service to the City of Destin while honoring all existing commitments.

TAB 4
OPERATIONAL PLAN

OPERATIONAL PLAN

The Dynamic Team routinely performs debris removal services as part of our core competencies, resulting in a successful track record of meeting the objectives of debris removal projects, including many following major disaster events and under challenging conditions. Our success is driven by our responsive approach, qualified personnel, rapid mobilization, expedient execution, state-of-the-art equipment, and corporate culture of excellence.

We have met the objectives of debris removal services in the past by investing in qualified personnel, state-of-the-art equipment, and the tools and resources necessary to complete projects safely, expediently, and in a responsible manner. A specific focus of our team has been to ensure that we treat every project with the utmost sense of urgency because slow and steady does not, in fact, win the race when it comes to the exigency of drainage and water management needs in a community. The longer these projects take, the greater the risk of additional damage to community resources, and ultimately people's lives. This is why the Dynamic Team is built for speed. We preposition resources (people, equipment, and supporting infrastructure) so that we minimize mobilization times and get to work as soon as we receive the call to action.

PERSONNEL

Our Team works in both upland and marine environmentally sensitive areas, including those with protected wildlife provisions. Our employees are specifically trained in derelict vessel removal, handling, and disposal and the proper handling of hazardous debris, which may involve public health and safety concerns.

As an experienced disaster contractor, we utilize objectives that have been proven successful and provide the flexibility needed to account for the complexity and degree of site work involved in similar projects. As with all previous, similar projects, a clear understanding of the scope of work and consistent, open communications the team. We strive to always identify individuals, groups, and agencies that have a role in the proposed work. Dynamic personnel and key stakeholders meet regularly to fully understand the existing conditions and anticipated scope of work and discuss at a minimum, post-event conditions, degree of blockage, locations of debris and blockages, priority for removal, damage threats, health and safety concerns, and types of debris. We review any available surveys, reconnaissance, and reports relating to the debris removal. We obtain any necessary right-of-entry approvals and permits. We then assess the access options and make a plan for sectioning off the waterways and clearing the debris in the most time-efficient manner. Most assignments have some degree of upfront communication; however, we are prepared and fully capable to arrive onsite to unknown conditions. We are flexible enough to adapt and modify our plan as we progress and explore the concerns.

In order to effectively manage debris cleanup and processing operations in the aftermath of an emergency event, the Dynamic team has refined a five-stage Debris Management Plan. This plan not only allows for operational continuity, but also ensures that the Dynamic team can efficiently and swiftly manage post-disaster Debris Removal and Disposal scenarios.

MANAGEMENT PROCESSES AND COORDINATION PLAN

Dynamic Group, LLC has established a structured and proactive management process to ensure seamless interaction between the City and our team throughout the post disaster debris removal operation. Our approach prioritizes clear communication, efficient execution, and real-time coordination to maximize responsiveness and operational effectiveness post-disaster.

DEDICATED PERSONNEL AND KEY ROLES

Dynamic's dedicated team of professionals to ensure the efficient execution of debris removal services while maintaining compliance and safety. Our Project Manager serves as the primary point of contact for the City, overseeing overall project execution, regulatory adherence, and performance. The Operations Manager directs daily debris removal activities, ensuring efficiency and adherence to safety protocols. To maintain FEMA compliance and accuracy in documentation, our Quality Control Officer continuously monitors operations. Three Field Supervisors oversee crews, track progress, and swiftly address on-site challenges. The Logistics Coordinator strategically manages the mobilization and demobilization of resources to optimize deployment. Safety remains a top priority, with our Safety Officer ensuring regulatory compliance and mitigating risks to both personnel and the public. Additionally, our Customer Service Representative serves as a vital link between Dynamic, the City, and the public, providing clear communication and prompt issue resolution.

This structured team approach allows for a streamlined, responsive, and highly effective debris removal operation.

INTERACTION AND COMMUNICATION PLAN

Dynamic fosters open and transparent communication with all stakeholders through:

Daily Progress Meetings: Regular briefings with the City and Consultant to provide status updates, address concerns, and refine operational strategies.

Real-Time Reporting: Utilization of GPS fleet tracking and digital documentation to keep all parties informed of progress, debris volumes, and site conditions.

Issue Resolution Protocols: A streamlined process to quickly identify, document, and resolve challenges that may arise during operations.

Customer Service Support: Our dedicated Customer Service Representative will be available to assist with City inquiries, provide updates, and ensure smooth coordination between all parties.

Dynamic's proven management processes will ensure efficient coordination, compliance, and execution, allowing the City and Consultant to remain fully informed and involved in every stage of debris removal. Our dedicated personnel, advanced tracking systems, and customer-focused approach will facilitate a collaborative and highly responsive operation to support the City's disaster recovery efforts.

LEADERSHIP ADVISORY PANEL

JIMMIE MCCOY

- 40 years of civil construction and disaster recovery experience
- Served on numerous committees as Chairman of Livingston Parish Coucil
- Served as a supervisor of Department of Wildlife and Fisheries for over 20 years
- Highly skilled in city planning, economic development, and personnel management as well as possesses strong concepts of all State and Federal laws and regulations

COLONEL PAUL RAINWATER (R)

- Served in numerous government roles over the past 30 years distinguishing him in the political arena as one of the most experienced professionals in disaster recovery funding
- Responsible for the appropriation of over $14 billion in FEMA and HUD programs a proved for the State of Louisiana after Hurricanes Katrina, Rita, Gustav, and Ike
- Certified Local Government Manager and a veteran who served U.S. Senator Mary Landrieu's office and Governor Jindal's administration

MAJOR GENERAL DAVID BALDWIN

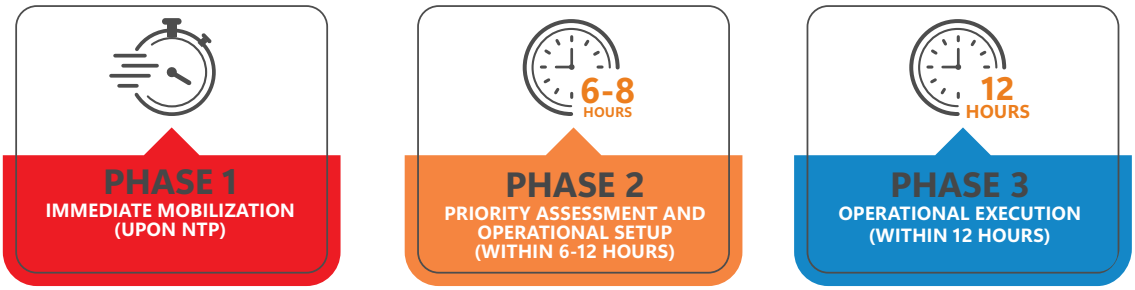
- Highly skilled in emergency management and disaster response.
- Served as commander of the California National Guard, the largest, most tasked National Guard force in the US, with an authorized strength of 23,000 personnel.
- Education includes BS from Stanford University, a Masters in Public Administration, and a Master of Strategic Studies from the United States Army War College.
- Awarded the President of Ukraine's Order of Merit Second Class for Distinguished Service.

ORGANIZATIONAL CHART

CHAIN OF COMMAND

RESPONSE TIME

Following a disaster declaration, the Dynamic Team is fully equipped and prepared to clear the City road network of debris within the first 70 hours, ensuring safe and accessible transportation routes. Upon receiving the Notice to Proceed (NTP), the Dynamic team will immediately implement a priority phase planning approach to streamline operations and ensure the efficient execution of tasks. We will also prioritize gathering all necessary Rights of Entry (ROE) forms for roadway and waterway operations and verify access availability to each lateral and the lateral's capability of handling the required equipment. Our team is committed to working 12-hour shifts, 7 days a week, unless otherwise directed, to efficiently and effectively address the critical needs of the community and restore essential infrastructure as quickly as possible. Debris removal operations that generate excessive noise levels will take place during daylight hours and adjustment to the hours of operations, based on working conditions and scope of work, may require a coordinated change with the approval of the City of Destin designated official. The Dynamic Team is committed to the following estimated response timeline:



ESTIMATED RESPONSE TIMES		DEDICATED PERSONNEL
DEPLOY MANAGEMENT TEAM TO AREA	UPON NOTICE TO PROCEED (NTP)	JOSH MCCOY KEVIN BREAUX TOMMY CROSBY MARC WATKINS BEN BANKSTON DYNAMIC WILL COORDINATE WITH CITY OFFICIALS AND EMERGENCY OPERATIONS CENTER 24 HOURS PRIOR TO IMPACT FOR IMMEDIATE READINESS FOR RESPONSE OPERATIONS.
DISCUSS PRELIMINARY DAMAGE ASSESSMENTS WITH CITY	UPON NOTICE TO PROCEED (NTP)	
IDENTIFY SAFETY, CONCERNS, IDENTIFY PICKUP ZONES, SECURE DISPOSAL SITE, TRAFFIC CONSIDERATIONS, AND EQUIPMENT REQUIREMENTS	UPON NOTICE TO PROCEED (NTP)	
DEPLOY FIRST WAVE OF MOBILIZATION MANPOWER AND EQUIPMENT	UPON NOTICE TO PROCEED (NTP)	
REVIEW EMERGENCY CLEARANCE ZONE PRIORITIES	WITHIN 6-8 HOURS	KEVIN BREAUX TOMMY CROSBY JAMES EVANS NICK HASLEM MIKE HAMILTON
OBTAIN REQUIRED PERMITS (AS NEEDED)	WITHIN 6-8 HOURS	
SET UP ONSITE OFFICE & STAGING AREAS FOR PERSONNEL & EQUIPMENT CHECK-IN	WITHIN 12 HOURS	KEVIN BREAUX TOMMY CROSBY JAMES EVANS MIKE HAMILTON DUSTY WALKER CHRIS WHITTINGTON SCOTT MAHLER
CHECK IN ALL EQUIPMENT AND PERSONNEL	WITHIN 12 HOURS	
CERTIFY AND MARK TRUCK, TRAILER, AND CONTAINER CAPACITIES	WITHIN 12 HOURS	
DEVELOP A TRAFFIC CONTROL PLAN ALONG POTENTIAL HAUL ROUTES	WITHIN 12 HOURS	

TASK ONE

Emergency Infrastructure Restoration

TASK 1: INITIAL ASSESSMENT

Whether by observation from the air or 'windshield' assessments, actual debris volumes will be estimated for planning purposes. Based on these observations, and in accordance with the City's representative(s), a route plan and a preliminary schedule is developed. Specific traffic related issues are discussed, and plans are set in place to address each identified issue. Equipment and personnel check-in sites along with operations staging areas will be established to allow for command and control.

TASK 2: EMERGENCY ROAD CLEARANCE | THE PUSH

Once all vehicles and equipment are inspected, teams are assigned to specific areas of operation. The teams will begin clearing the debris that obstructs immediate lifesaving actions and that poses an immediate threat to public health and safety following a major or catastrophic event. Stage 2 consists of the initial push and clearing access to critical facilities. This stage must start immediately after the City establishes it is safe to do so.

The initial push shall consist in pushing away from key roads any debris produced by the disaster. At least one lane should be cleared on each arterial, major and secondary road. Debris may include tree blow-down and broken limbs; yard trash such as outdoor furniture and trash cans; utility poles, power, telephone and cable television lines, transformers and other electrical devices; building debris, such as roofs, sheds, block walls and chimneys; and personal property, such as clothing, appliances, boats, cars, trucks and trailers. In Stage 2, roadway debris must be quickly moved to the side of the road to provide access into devastated areas. No attempt must be made to remove or dispose of the debris, only to provide clear access routes to allow for:

- Movement of emergency vehicles
- Law enforcement Resumption of critical services
- Damage assessment of critical public facilities and utilities

SUBTASKS: CLEAR ACCESS TO CRITICAL FACILIITES

PRIORITIES

Priority for emergency road clearance will be based upon the following Course of Action (COA) criteria, established by the Department of Emergency Management in the City's All Hazards Response Plan and determined by the nature and magnitude of the disaster:

COURSE OF ACTION (COA) 1

Priority #1

a. Hospitals
b. Police/911 Centers
c. Fire/Rescue Stations
d. Residential Areas

After emergency access has been provided to hospitals and police and fire stations, the next priority is to open access to other critical community facilities, such as schools, municipal buildings, water treatment plants, wastewater treatment plants, power generation units, airports and seaports.

Priority #2

a. Schools, municipal buildings and shelters
b. Water and wastewater treatment plants
c. Power generation units
d. Airports and seaports
e. Residential Areas

COURSE OF ACTION (COA) 2

Routes needed to:

A. Extricate people
B. Major flood drainage arteries
C. Egress for fire, police, and Emergency Operations Center
D. Communications towers
E. Ingress to hospitals, jail, and special care unit
F. Major traffic routes
G. Egress [Designated operations center and shelters] for fleet, traffic, road and bridge, and designated remote locations
H. Supply distribution points and mutual aid assembly areas
I. Government facilities
J. Public Safety communications towers
K. American Red Cross shelters infomercials will be planned and developed with City officials to keep the public informed.
L. Secondary roads to neighbor collection points
M. Access for utility restoration
N. Neighborhood streets
O. Private property adversely effecting public welfare.

Stage 2 also consists of Temporary Debris Management Sites (TDMS) being activated: personnel and equipment are deployed; inspection towers, border fences, and containment areas are constructed; and pre-planned ingress/ egress routes are opened. All TDMS actions are completed within 24 hours of Notice to Proceed.

TASK 3: RIGHT-OF-WAY DEBRIS REMOVAL

DEBRIS COLLECTION, PROCESSING AND DISPOSAL

Stage 3 will be started as soon as requested by the City. This stage involves collecting, processing and disposal of the debris placed on the public ROW from Stage 2, as well as debris that continues to be placed curbside by residents, to include continuing the cleanup of the roads and other City owned facilities, such as parks, and the removal, processing and disposal of leaners, hangers and stumps from City ROWs and the removal, processing and disposal of debris from City ditches and canals. Debris collection, processing, recycling/re-use and disposal operations performed by the Dynamic will be monitored by the City designated POC and/or the City's Monitoring/Management Contractor. For this phase, Department of Public Works crews may assist with the collection, processing and disposal contractors in hauling disaster-generated debris from the City ROW, Debris Management Sites (DMS), Residential Storm Debris Drop-off Sites (RSDDS), or DEQ-permitted DMS, and disposal/ recycling locations. This will be determined by the City leadership, given the ability to help perform these operations. All City work would be used to offset the cost share % for FEMA. Debris will be collected by City crews and/ or contractors in each of the debris collection zones and RSDDS as directed by the City Debris Managers and/or the City's Monitoring/Management Contractor.

Debris Collection, Processing and Disposal Dynamic shall conduct, the following tasks upon City approval: Debris clearance operations per the City guidance.

- Collection and removal of debris from City maintained rights-of-way, streets, roads, ditches, canals, beaches and public property;
- Processing debris including, but not limited to, screening, sorting, grinding, mulching, recycling, and burning, in accordance with the requirements of the Louisiana
- Department of Environmental Quality;
- Collection and disposal of white goods, ewaste small motorized equipment, household hazardous waste, toxic waste, tires and dead animals, etc.;
- Disposal of debris;
- Establishment, operation and restoration of debris management sites (DMS);

SUBTASK: COLLECT AND TRANSPORT CURBSIDE DEBRIS TO TEMPORARY STAGING AREAS

A. CURBSIDE COLLECTION

Eligible debris will be collected from the curb during preestablished pickup times. Different types of debris, i.e. vegetative, C&D, white goods, etc. may be collected in separate passes. If the debris is not segregated at the curb by the resident, the City and/ or Dynamic may need to segregate it. There will be multiple, scheduled passes of each site, location, or area impacted by the disaster according to assigned Debris Zones. This manner of debris removal will allow residents to return to their properties and bring all debris to the edge of

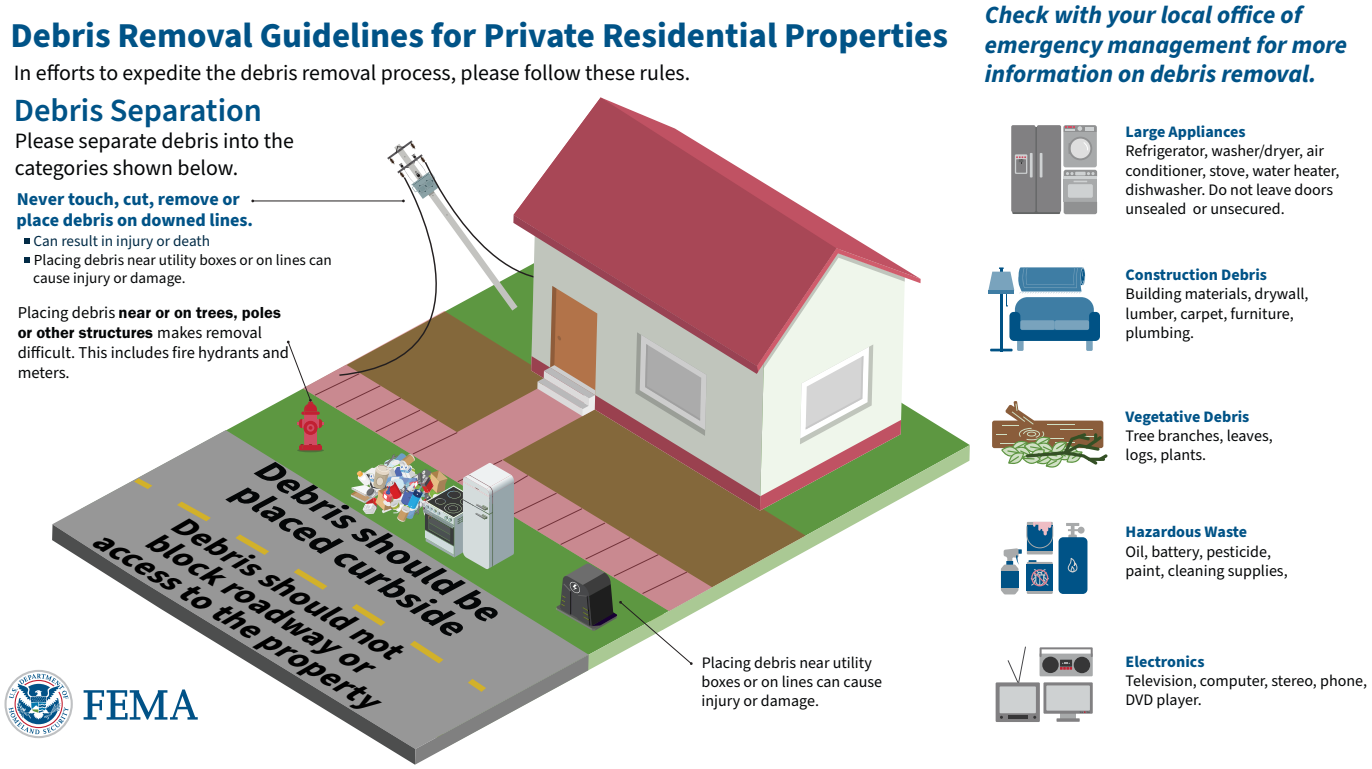
the rights-of-way adjacent to their property. The number and schedule of passes shall be as directed by the City in coordination with Dynamic. Sufficient time shall be scheduled between subsequent passes to accommodate reasonable recovery by residents. Schedules should be provided to the City Public Information Officer for publication and notification by the news media.

Vegetative Debris includes all biodegradable matter except that included in the following definitions of other categories of debris. It includes, but is not limited to, damaged and disturbed trees; stumps, bushes and shrubs; broken, partially broken and severed tree limbs and brush. Vegetative debris shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations.

B. CURBSIDE SEPARATION

The public should be notified by Press Release to sepa¬rate debris at the curb. The diagram below is included as a basic guide to show how to separate the debris. The diagram may change depending on the nature and mag¬nitude of the event. The City and/or Dynamic will perform curbside separation of debris by types of debris detailed below including vegetation, C&D, non-C&D and HHW before hauling and recycling and/or disposing. This is required so that debris can be sent to the appropriate DMS or disposal site for processing and recycling.

The State of Louisiana Comprehensive Plan for Disaster Debris Management requires that vegetative debris be reduced by 50% in both weight and volume. Chipping, grinding and/or burning will be done to provide an end product that in most cases will be suitable for beneficial reuses such as compost, mulch, roadbed base, alternative daily landfill cover, etc. Construction and Demolition (C&D) Debris includes, but is not limited to, building materials, timber; sheet rock, fencing, brick, stucco and any other structural component with the exception of asbestos containing materials. C & D shall be collected, hauled,dispo sed and/or recycled in accordance with all federal, state and local regulations. C& D debris may be disposed of in a Type III Landfill.



OPERATIONAL PLAN

- Vegetative Debris includes all biodegradable matter except that included in the following definitions of other categories of debris. It includes, but is not limited to, damaged and disturbed trees; stumps, bushes and shrubs; broken, partially broken and severed tree limbs and brush. Vegetative debris shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations. The State of Louisiana Comprehensive Plan for Disaster Debris Management requires that vegetative debris be reduced by 50% in both weight and volume. Chipping, grinding and/or burning will be done to provide an end product that in most cases will be suitable for beneficial reuses such as compost, mulch, roadbed base, alternative daily landfill cover, etc.

- Construction and Demolition (C&D) Debris includes, but is not limited to, building materials, timber; sheet rock, fencing, brick, stucco and any other structural component with the exception of asbestos containing materials. C & D shall be collected, hauled,dispo sed and/or recycled in accordance with all federal, state and local regulations. C& D debris may be disposed of in a Type III Landfill.

- Non-C&D Debris includes any household contents such as personal belongings, furniture, carpet, household items, etc. which does not meet the criteria to be disposed of in a Type III landfill, unless a specific exemption is allowed. Non-C & D debris shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations.

- White Goods include large household appliances, such as refrigerators, ovens, etc. White goods shall be collected, hauled, and recycled in accordance with all federal, state and local regulations. Freon removal is the responsibility of the collection, processing and disposal contractor.

- Household Hazardous Waste (HHW) shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations.

- Waste Petroleum Products shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations.

- Electronic (E-waste) Debris includes items such as computers and televisions, which may contain circuits or circuit boards. E-waste shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations. E-waste will be recycled as practical.

- Waste Tires include automobile and truck tire. Waste tires shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations.

- Dead Animals shall be collected, hauled, and disposed in accordance with all federal, state and local regulations. Dead animals will be disposed of in a solid waste landfill or by burning.

- Soil shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations. Soil will be reused as fill, landfill cover, road base or other beneficial reuses as practical.

- Sand shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations. Sand will be reused to restore beaches, dunes, etc. as practical.

- Ash is the residue produced by incineration of burnable debris. Ash shall be collected, hauled, disposed and/or recycled in accordance with all federal, state and local regulations. When handling ash, it will be required to "wet down" the ash to prevent dust problems. Ash will be reused beneficially as a soil amendment, as practical, or will be disposed of in a landfill.

Household hazardous waste (HHW) may be generated as a result of a major natural disaster HHW may consist of common household chemicals, and items such as propane tanks, oxygen bottles, etc. These items may be mixed into the debris stream. HHW may be collected separately, depending on the severity of the event. Properly trained personnel or emergency response HHW contractor(s) may be required for removal and disposal/recycling of HHW. HHW will be recycled/re-used whenever possible. The City and/or Dynamic will coordinate with regulatory agencies concerning possible regulatory waivers and other emergency response requirements and to ensure cleanup actions meet local, tribal, State, and Federal regulations.

White goods shall be collected separately. All white goods will be recycled. Freon and oil will be extracted prior to disposal. Refrigerators and freezers containing food will not be collected and the resident will be advised to remove all food waste from refrigerators before placing them curbside.

Other wastes, such as small motorized equipment, petroleum products, dead animals and tires shall be kept segregated for disposal or recycling, wherever possible. For maximum safety and efficiency, the Dynamic Team will apply the following standards:

Waterway Debris Clearance Equipment – Debris clearance equipment in the waterway will vary based on the factors described above. Selection of the right equipment profile for that section of the creek is based on maximizing safety and production as well as minimizing environmental impact.

Hauling Equipment – All trucks and trailers used to haul debris will be capable of rapidly and independently dumping loads and will be equipped with a tailgate. When necessary, low impact tires will be used to minimize damage to the ground.

Truck Measurements and Signage – Trucks will be measured accurately and identifying data will be fully documented. The dimensions will be the inside measurements of the trailer. The truck specifications will be on file with the City. Signage and vehicle numbers will be prepared and ready prior to deployment. Dynamic identification placards will be affixed to the sides of each piece of heavy equipment and trucks.

Hours of Operation – Debris removal operations that generate excessive noise levels will take place during daylight hours, seven days a week. Adjustments to the hours of operation, based on working conditions and scope of work, may require a coordinated change with the approval of the City's designated official.

Dynamic has the ability to track and manage multiple crews either working on the same lateral or working in multiple laterals. Dynamic's GPS tracking system is a key to this success and allows us to locate and track our crews real time. It also gives up the ability to document path traveled and laterals that have been completed.

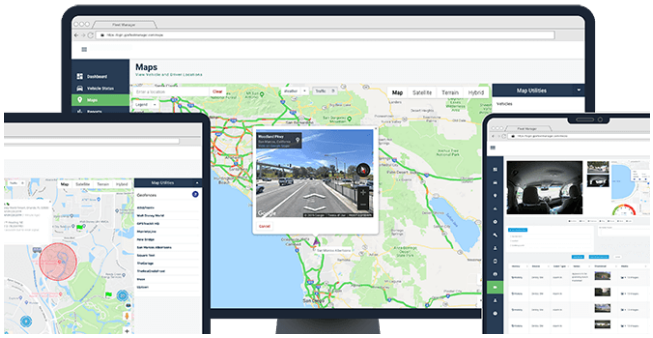
Once Dynamic receives a Notice to Proceed, crews will begin gathering all necessary Rights of Entry (ROE) to ensure access to each lateral is available and capable of handling the required equipment.

TECHNOLOGY

We also leverage technologically advanced tools and software to improve operations. In the field, we use a complete GPS system with a Trimble R10 GNSS and TSC3 handheld controller. Having this capability in-house allows us to better communicate with clients and residents to quickly identify and prioritize areas of concern. In the office, we utilize AutoCAD Civil 3D 2019 to process data, communicate site details with the field crews, and create design plans. We also have a self-developed internal web-based reporting system that allows all supervisors to submit a summary of work performed each day, planning for the next day, as well as exemplary recognition for employees. These daily reports allow management to review each day's progress and ensure the job continues on schedule.

In the field, our foremen are equipped with iPads and iPhones that are connected to the database, have custom-designed apps installed for increased communication, and photo and video streams for collaborative use. To assist with photo-documenting disaster services, our crews utilize a camera app that captures complete site details

including location, time, and date for each photo. Field Supervisors also utilize a GIS application to immediately share linework and communicate locations and other project specific details. For large-scale projects, we often film job sites with our own aerial photography equipment to obtain useful images and videos of project progress and overview.



Right of Entry (ROE) Agreement

Property Owner(s) (the "Owner"): _____

Property Address (the "Property"): _____

Representative Name (if applicable): _____

Telephone Number: _____

Address: _____

Brief Description: _____

I, the Owner/authorized representative of the Owner of the above Property, authorize Dynamic Group, LLC and its officers, directors, employees, representatives, assigns, and any person or entity who may be connected with Dynamic or retained by Dynamic (collectively "Dynamic") to enter the above described Property at its own cost and risk to complete the respective obligations with reasonable access to the Property at reasonable times to perform the Work.

I represent and warrant that I have the full power and authority to enter in to, execute, and deliver this ROE Agreement and to perform the respective obligations hereunder. The ROE Agreement has been executed and delivered by me and constitutes a valid and binding obligation of the Owner. I understand and agree that this authorization shall remain in effect until Dynamic receives written notice from me terminating such authorization.

Dynamic and I hereby voluntarily, without duress, and in advance release each other from any causes of action or claims arising from damages sustained as a result of the Work. I HEREBY WAIVE ANY CLAIM I MAY HAVE AGAINST ANY OF THE ABOVE PERSONS OR ENTITIES AND RELEASE SUCH PERSONS OR ENTITIES FROM LIABILITY.

- Property will be brought back to original condition after job has been completed (ground, fence, etc.)
- Owner **will / will not** keep spoils removed from waterway.
- Owner **will / will not** allow storage of equipment trailer on property. Owner will not be responsible for any damage or theft to contractor equipment while stored on property.

PUBLIC NOTICES

Dynamic will work with public information efforts to inform residents about disaster recovery, debris management tasks, and how residents can participate in the community's debris management and the expectations for the upcoming period.

Dynamic will participate in any established joint information center and provide materials and information to ensure the public is aware of debris clearance disaster recovery endeavors

TASK 4: COMPLETION OF DEBRIS PROCESSING, REDUCTION AND DISPOSAL PROCESSES

It is Dynamic's goal to beneficially recycle/reuse as much debris as possible. Those materials that are not recycled or beneficially re-used will be disposed of at an appropriately permitted disposal site. Below is a list of recycling operations that may take place.

- Metals: Crushed and shredded house trailers, appliances, and other metal products can be prepared for recycling using metal maulers and shredders.
- Construction Materials: Concrete, asphalt, and masonry products may be crushed for base material in road construction.
- Plastics and Glass: Plastics may be shredded, bailed, and palletized. Glass may be melted and reused.
- Soil: Soil, combined with decomposed organic materials, may be recycled for agricultural use or fill material.
- Vegetative Debris: Ground debris may be composted for mulch

SUBTASK: MANAGING TEMPORARY DEBRIS MANAGEMENT SITES (TDMS)

Dynamic will provide all management, equipment, operators, and laborers required for the establishment, operation, and maintenance to accept, process, reduce, incinerate, and dispose of disaster related debris. The Temporary Debris Management Sites (TDMSs) will use mechanical chipping/grinding to reduce vegetative and clean woody debris. C&D that is collected will be removed from the waterway and then hauled directly to final disposal.

OPERATIONAL PLAN

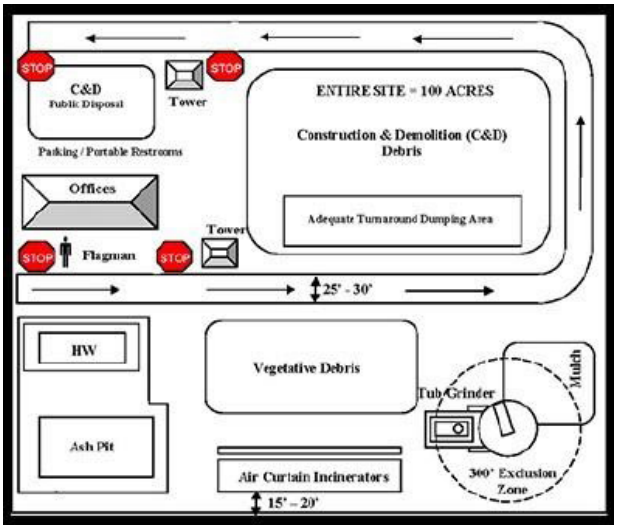
Proper staffing of the TDMS is of utmost importance for ensuring the effective and efficient management of site operations. Dynamic has extensive experience with selecting, managing, and operating TDMS and will work alongside the City and FEMA to ensure that all sites meet the requirements and expectations prior to any work being performed.

Furthermore, Dynamic will continuously enforce:

a. Commitment to the deliverance of timely and quality service

b. Contractor Safety Plan and environmental protection standards, and

c. The keeping of accurate and honest reporting, accounting, and documentation.



If a TDMS is set up it will address the following:

- Site ingress and egress
- Site preparation, including clearing, erosion control, and grading
- Traffic control procedures
- Site security
- Site safety
- Site layout/segregation plan, to include:, mechanical chipping/grinding areas, contractor work area, inspection tower, and safety zone clearance areas
- Environmental mitigation features, including considerations for dust, noise, traffic, safety buffer zones, storm water runoff, historic preservation, wetlands, and endangered species as appropriate

TDMS FOREMAN

Dynamic will ensure that each site has an operations foreman, who will be responsible for all oversight, including traffic control, dumping operations, segregation of debris, and mechanical grinding operations, and site safety.

The foreman will be responsible for monitoring and documenting all equipment and labor utilized onsite. This information will be compiled with other daily reporting data and will be provided to the contracting authority by the Debris Operations Manager.

SITE ASSESSMENT

Photographs and/or GPS based maps of the site will be updated as the use and configuration of the site changes.

SITE DESIGN

Roads are designed with separate ingress and egress, where possible, to expedite truck flow in and out of the site. Large turnaround areas will be maintained to enable simultaneous movement of multiple trucks.

To reduce hazards from flying debris, wood chipping operations will be located a minimum of 150-200 feet from all areas where personnel are actively working.

Crushed rock or gravel is used to form a base that will prevent soil erosion, reduce dust generation, and provide truck access during inclement weather. Additional applications of rock may be necessary for road maintenance as the project progresses. Additional reserves of rock are readily available to repair and rebuild roads for road relocation, mud accumulation, and compression of rock as a result of heavy truck traffic.

SITE SECURITY

Site security measures will consist of limited access gates, signage, lights and cameras (as needed).

INSPECTION TOWERS

Dynamic will maintain one Inspection Tower at the TDMS. Existing structures serving this purpose may be utilized following coordination between Dynamic and the City. Tower locations may be changed to support the progression of debris storage and reduction as well as normal traffic patterns on the site. The floor elevation of the tower will be such that it affords a complete view of the load bed of each piece of equipment that hauls debris to the site while allowing for the easy transfer of the debris removal load ticket between the City representative and the vehicle driver. All terrain scissor lifts may be used as an Inspection Tower

DEBRIS UNLOADING AND SEGREGATION

Trucks containing any waste other than vegetative debris will be directed through the disposal site to the C&D final disposal site.

Photos and live video may be utilized to record actual hauling equipment.

Trucks containing vegetative debris will be directed to the debris depository areas of the sites in an orderly manner via the ingress. Once the debris has been deposited at the base of the debris storage pile, dozers or track hoes will be used to move and pile the debris. Debris piles will be compacted and constructed with a slope to prevent loose debris from rolling or falling down the sides of the piles.

DEBRIS CHIPPING

Horizontal grinders will be set up at the TDMS to convert the debris into wood chips suitable for use as mulch or fill. A knuckleboom loader or trackhoe will be used to load debris into the grinder. Due to the noise generated by the grinders and the hazard hazards of operating mechanical machinery, the grinders will be set up at least 150 to 200 feet from all other work areas.

A dozer will be used to stockpile mulch as it is processed by the grinders. Large amounts of processed debris will produce large mulch piles. Consideration will be given to the amount of material that will be chipped and adequate space should be allotted for stockpiled mulch. The piles should be at least 50 feet away from the grinder.

The temperature of the stockpiled mulch will be monitored to prevent spontaneous combustion. If the temperature approaches or exceeds 150 degrees Fahrenheit, the stockpile will be rolled to release the heat buildup.

FIRE PROTECTION

Dynamic will manage all site operations to minimize the risk of uncontrolled/uncontained fire. Twenty-pound all-purpose fire extinguishers should be strategically stationed around the TDMS.. At no time should a fire extinguisher be located further than a 1-minute round-trip walking distance from any point on the site. Site conditions may necessitate having additional water-filled extinguishers and readily available hand tools, such as fire rakes.

SITE CLOSURE

Dynamic will close the TDMS within 30 calendar days of completing the reduction or transfer of all delivered debris to an authorized final disposal. Site closure will include removing site equipment, debris, and all remnants from the processing operation; grading the site; and, restoring the site to pre-occupancy conditions.

Dynamic will conduct a final inspection of the site along with the City representative to receive final approval of the site closure.

FINAL DISPOSAL OF DEBRIS AND DEBRIS BY-PRODUCTS

Disposal of all eligible debris, reduced debris, ash residue, and other products of debris management will be performed in accordance with all applicable state, federal, and local laws. Associated related costs will be "pass-through" with no additional charges. Dynamic will ensure disposed debris is properly documented in accordance with FEMA protocol by using approved collection/disposal and tipping tickets.

TASK 5: CLOSEOUT

DMS SITE REMEDIATION

During the debris removal process and after the material is removed from the debris site, environmental monitoring will take conducted. This is to ensure no long-term environmental effects occur. Environmental monitoring will be conducted in the following areas:

a. **Ash:** Monitoring consists of chemical testing to determine suitability of material for landfill placement.

b **Soils:** Monitoring consist of using portable meters to determine if soils are contaminated by volatile hydrocarbons. This will be done if a determination is made that chemicals such as oil or diesel has spilled on to the site.

c. **Groundwater:** Monitoring is done on selected sites to determine effects of rainfall leaching through ash areas or stockpile areas.

SUBTASK: DMS CLOSURE CHECKLIST

- Debris operations are complete.
- Site is cleared and cleaned of all debris.
- Final environmental sampling is obtained.
- Site is restored to prior condition.
- Property owner is satisfied (if leased property).

It is Dynamic's intent to have all DMS and TDMS closed and restored within 30 days of completion of all debris removal operations.

OPERATIONAL PLAN

Dynamic Group, LLC is committed to delivering cutting-edge solutions and dedicated personnel to support the City of Destin pre-planning analysis through debris operations and execution. Our approach integrates advanced technology, strategic resource allocation, and proactive planning to mitigate the impact of future disasters and ensure a rapid, coordinated response.

Our experienced team will work alongside the City throughout every phase of disaster recovery, providing expert guidance, operational support, and real-time decision-making to ensure an efficient, compliant, and cost-effective debris management process.

INNOVATIVE TECHNOLOGY FOR SMARTER RECOVERY

One of our key innovations is the use of drones in disaster recovery operations. These unmanned aerial systems provide rapid, cost-effective, and safe solutions to enhance emergency response efforts. Our drone technology supports:

DAMAGE ASSESSMENT:

High-resolution imaging and video capture allow for quick evaluation of affected areas, helping authorities prioritize response efforts.

INFRASTRUCTURE INSPECTION:

Drones safely inspect critical infrastructure, such as bridges, power lines, and buildings, minimizing risks to human inspectors.

MAPPING AND DATA COLLECTION:

Real-time mapping and 3D modeling provide accurate insights for efficient planning and resource allocation. Environmental Monitoring: Advanced sensors detect hazards such as gas leaks, fires, or chemical spills, ensuring a safer recovery process.

COST AND TIME EFFICIENCY:

Drones significantly reduce assessment time and costs compared to traditional methods, expediting the overall recovery process.

EXPERIENCED PERSONNEL AND STRATEGIC EXECUTION

Dynamic's committed personnel will play a crucial role in supporting the City of Destin from pre-disaster planning to final debris removal execution. Our team brings:

PRE-PLANNING AND RISK ANALYSIS:

Identifying vulnerabilities, securing debris management sites, and ensuring FEMA compliance before a disaster strikes.

RAPID MOBILIZATION:

A fully prepared team capable of immediate activation, ensuring swift response and efficient debris removal post-disaster.

OPERATIONAL OVERSIGHT:

On-site project managers, safety officers, and compliance specialists ensuring seamless execution and problem resolution.

GPS FLEET MANAGEMENT:

Real-time tracking for optimized routing, accountability, and operational transparency. By leveraging innovative tools, dedicated personnel, and local resources, Dynamic ensures a strategic, well-coordinated, and proactive approach to disaster recovery in the City of Destin—delivering results efficiently, safely, and in full compliance with federal and local regulations.

UTILIZATION OF DRONES

Drones play a crucial role in Dynamic's disaster recovery by providing rapid, efficient, and safe support in various ways:

1. **DAMAGE ASSESSMENT**
   Drones can quickly survey affected areas, capturing high-resolution images and videos to assess damage, helping authorities prioritize response efforts.
2. **INFRASTRUCTURE INSPECTION**
   They safely inspect damaged infrastructure, such as bridges, power lines, and buildings, reducing the risk to human inspectors.
3. **MAPPING AND DATA COLLECTION**
   Drones create real-time maps and 3D models of disaster zones, providing accurate data for effective planning and resource allocation
4. **ENVIRONMENTAL MONITORING**
   They detect hazards like gas leaks, fires, or chemical spills, helping prevent further harm and guiding cleanup efforts..
5. **COST AND TIME EFFICIENCY**
   Drones cover large areas quickly and at a lower cost than helicopters or ground teams, accelerating disaster response and recovery.

Overall, drones improve safety, speed, and accuracy in disaster recovery, enabling faster relief efforts and saving lives.

Dynamics use of online cloud-based platforms offers numerous benefits that enhance business operations by streamlining processes, improving collaboration, and boosting productivity. It automates repetitive tasks, manages workflows, and eliminates manual processes to save time and resources. Our integrated systems foster seamless teamwork through real-time data sharing and secure access controls, enhancing communication and efficiency with all our Subcontractors. Its customizable solutions allow Dynamic to tailor applications for project management, inventory tracking, and sales monitoring. With robust analytics and reporting tools, we deliver data-driven insights for informed decision-making. Advanced security features, including role-based access controls and data encryption, ensure sensitive data is protected.

PHASE APPROACH TO DEBRIS MANAGEMENT

PROACTIVE PLANNING & SWOT (STRENGTHS, WEAKNESS, OPPORTUNITIES, AND THREATS) ANALYSIS

Dynamic begins each project with a comprehensive SWOT analysis to assess potential challenges, enhance risk mitigation strategies, and identify key assets. This ensures optimized decision-making, streamlined operations, and minimal disruptions throughout the debris management process. We understand the City has a multiyear plan; integrating key personnel Dynamic offers experience from key personnel who have written, reviewed, and tracked emergency response and hazard mitigation plans for all 64 parishes. Dynamic can assist the City with evaluating plans and procedures for compliance with state and federal polices and are aligned with ICS/NIMS concepts to align with the national standard.

Review & Readiness Phase

Dynamic can review and provide verification that all emergency plans, including continuity of operation plans, and procedures are in compliance with state and federal policies and are aligned with ICS/NIMS concepts and terminology. Through a thorough technical review, the team will provide recommendations on necessary revisions to ensure compliance with federal and or state guidance. In addition to conducting a technical review of all relevant emergency operation plans, Dynamic can also execute a thorough analysis of each of the plans by conducting an analysis of key Strengths, Weaknesses, Opportunities, and Threats (SWOT) of the assessed plans. An integrated planning team with decades of planning experience will perform the SWOT analysis with the assistance of local government officials.

Integration Phase

Dynamic will utilize the SMART concept to integrate all lessons learned and needs for improvements that are identified. Smart ensures that corrective actions are developed to be Specific, Measurable, Achievable, Relevant, and Time-bound. Any revisions to plans and procedures will be recommended to the City based on federal planning guidance and any identified corrective actions as a result of a disaster or exercise conducted and documented.

COLLABORATIVE STAKEHOLDER ENGAGEMENT

We understand drills are already an integrated element of the City's protocol. Our subject matter experts have found success by building on drills with tabletop exercises and roundtable discussions involving community stakeholders. Involving community stakeholders in the planning and response framework can reveal gaps and concerns not previously identified, generate a pool of secondary and tertiary resources, and foster more collaborative, transparent communication channels. Examples of such engagement and planning activities include:

Roundtable Discussions

Recommended attendees to include local government officials, the department of public works, utility coordinators, other infrastructure leaders, education leaders, volunteer organizations, and other local leaders.

Business Base Tabletop Exercise

Engaging the local business community can lead to more coordinated response efforts within the community. Recommended attendees include first responders, government officials, local business owners, business leadership council members, and major healthcare systems, among others. In conclusion, Dynamic is committed to training and utilizing local labor during debris removal and recovery efforts. We prioritize partnerships with local businesses, hiring local workers, and utilizing local equipment. By involving the local community, we aim to contribute to the economic growth and development of the area while ensuring a timely and successful recovery process.

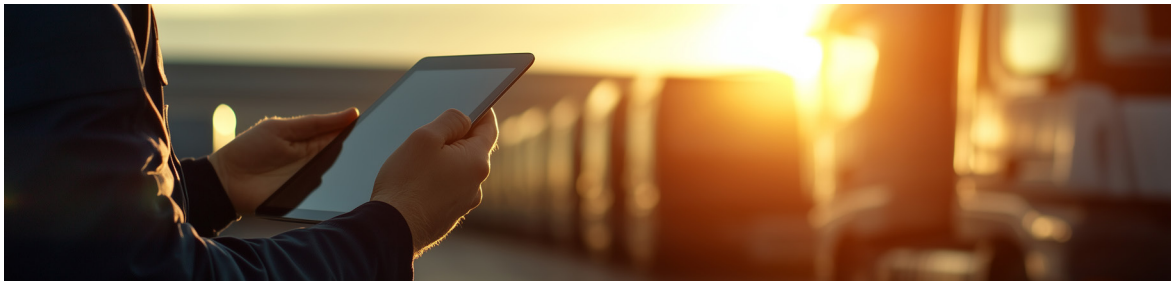
OPERATIONAL PLAN

Dynamic offers innovative concepts to increase efficiency, reduce risks, and more quickly restore the public health and safety of affected communities. The innovations we offer the City of Destin include advanced tools and systems, prioritization of local resources, and thoughtful planning and preparation to mitigate the impact of future disasters.

GPS FLEET TRACKING SYSTEM:

Our GPS fleet management system offers numerous benefits for us to utilize on your projects:

1. **REDUCE OPERATING EXPENSES**
   Optimizes routes to cut fuel and overtime costs
2. **SAVE TIME**
   Real-time traffic updates help avoid delays.
3. **REDUCE DOWNTIME**
   Efficient scheduling boosts productivity.
4. **OPTIMIZE RESOURCES**
   Monitors fuel usage, driver behavior, and engine idling.
5. **MAXIMIZE VEHICLE UTILIZATION**
   Minimizes idle time and fuel waste.
6. **ENHANCE CUSTOMER SATISFACTION**
   Ensures timely service and accurate delivery tracking.
7. **IMPROVE PREDICTABILITY**
   Provides precise locations and times, real-time updates.
8. **SUPERIOR ROUTE PLANNING**
   Identifies time- and cost-efficient routes.
9. **INCREASE TRIPS**
   Better planning allows more daily trips.
10. **ASSET TRACKING**
    Quickly locates lost or inoperable vehicles.
11. **LOWER MAINTENANCE COSTS**
    Monitors vehicle health to prevent unnecessary repairs.
12. **EASE OF USE**
    Accessible data via mobile devices for managers.
13. **IMPROVE SAFETY**
    Real-time monitoring enhances driver safety.
14. **REDUCE PAPERWORK**
    Automates data collection and reporting.
15. **STAY COMPETITIVE**
    Streamlined operations reduce costs and improve service.



SAFETY OBJECTIVES

Dynamic has successfully utilized its procedures and systems in all debris removal services, resulting in its zero accident and injury accomplishment, to date. Dynamic leads our industry in adherence to and use of Corporate, Safety, Health and Environmental procedures and systems, which rival the procedural governances of more highly regulated industries like commercial nuclear power operations. For example, Dynamic mandates the use of cross discipline feedback, supervisory review of risks, and advanced training and change notification requirements.

Safety at Dynamic is not only the job of our Health and Safety Manager or project safety officers, but also the responsibility of every employee, partner and subcontractor. All personnel, including our team partners and subcontractors, are responsible for carrying out work consistent with industry safety Safety Manager. Utilizing Job Safety Analyses (JSAs) and other safety tools to assess, foresee, prevent, and mitigate safety risks, is key to safely completing each task without injuries or damage to personnel, equipment and personal property.

ACCIDENT AND INJURY PREVENTION

Dynamic's commitment to accident and injury prevention and no injuries has resulted in

- 0 OSHA Recordables,
- NO Lost Time, and
- NO Restricted Duty injuries.

DYNAMIC'S PREVENTION, DETECTION, CORRECTION (PDC) MODEL

The PDC Model is Dynamic's strategic approach to maintaining and operating our projects using a risk-based bias to ensure prevention and detection occupy at least 80% of our time and resources, and correction activities occupy less than 20% of our time and resources.

PREVENTION

LOOK AHEAD and IDENTIFY the worst thing that can happen.

INCORPORATE specific mitigating actions identified during Look-Ahead process into work preparation and execution for all tasks.

DETECTION

MAINTAIN a questioning attitude, challenging conditions that are not as expected.

DETERMINE specific actions, reviews, observations, and peer checks that can be used to ensure the expected results are achieved.

CORRECTION

Correction involves thoroughly understanding problems to effectively resolve them the first time.

SAFETY TRAINING OBJECTIVES

Dynamic's Health and Safety Manager regularly visits active jobsite locations to observe and check on the health and welfare of the crews. The Safety Manager facilitates safety meetings, oversees accident reports, and conducts safety investigations as necessary, serving as the primary liaison.

The Dynamic Team, including subcontractors, are trained in the ability to:

1. Identify safety situations to address immediately with Dynamic's Supervisors and Safety Manager, who will then act swiftly, efficiently, and within all procedural requirements to handle the identified situation.
2. Deliver daily toolbox safety meetings and corporate safety performance metrics in a manner that is specific to the site and a worker's craft, scope of work, and job site conditions.
3. Influence a strong safety culture through numerous measures, including on-site behavioral and JSA audits with immediate positive feedback for workers who are observed performing work safely, and employee coaching to improve safety behaviors for those observed at-risk.

QUALITY ASSURANCE & QUALITY CONTROL

Dynamic's Corporate Quality Assurance and Quality Control Program (QA/QC) mandates standards for employees that will ensure each task is accomplished in such a way that the reimbursement is maximized. We develop a project specific quality plan in coordination with QC team members and the municipality that incorporates procedures, testing, and reporting processes to ensure quality and safe delivery of scope. The QA/QC Team is responsible for owning and resolving quality-related and other issues for the on-time delivery of quality control deliverables, including testing, quality control reports, QC meetings, QC training, recordkeeping, and QC certifications.

Our project management documentation process coupled with the debris monitor's reports provide for positive identification and control of work.

KEY ELEMENTS

- Proper certification of haul vehicles with signatures and approvals
- Proper field documentation of each load hauled by identifying the precise/certified vehicle, the driver, and location of eligible debris removed
- Proper field documentation of each disposed or reduced load, including disposal location and the safe, permitted operation of that disposal or reduction site location
- Daily reports, which may also include the updated loads-hauled database (if available), to ensure ongoing transparency and communication of work outcomes
- Reports and databases that are fully supported by accurate field documentation

FHWA EMERGENCY RELIEF AND FEMA DEBRIS REMOVAL COMPLIANCE

Dynamic's debris management process align with the Federal Highway Administration (FHWA) Emergency Relief (ER) Program and FEMA Debris Removal laws by meeting key compliance requirements, including:

1. ELIGIBILITY & COMPLIANCE WITH FEDERAL REGULATIONS FHWA ER PROGRAM

Requires proper documentation of debris removal on federal-aid roads, including GPS tracking, load verification, and disposal records.

FEMA 325 & 327 Guidelines:

Mandate photographic documentation, monitoring at collection and disposal sites, and an auditable trail of debris removal activities.

2. DOCUMENTATION & VERIFICATION

Load tickets (like the sample provided) serve as a primary verification tool for reimbursement, tracking debris type, location, truck ID, and certified capacity and comply with all City's reporting requirements and cooperating with designated debris monitors.

GPS coordinates and timestamps at both pickup and disposal sites ensure transparency and prevent fraud. Monitor verification at collection and disposal points ensures compliance with FHWA and FEMA monitoring requirements.

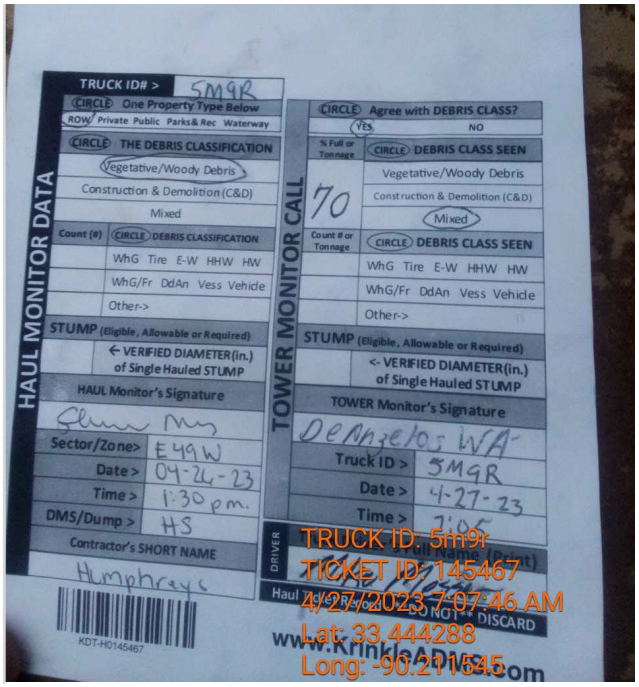
3. PHOTOGRAPHIC EVIDENCE & DIGITAL REPORTING

Photo documentation of loads before and after transport aligns with FEMA's best practices to verify debris quantities and prevent duplicate claims.

Automated tracking systems (KrinkleApps) streamline compliance by maintaining digital records, reducing errors, and ensuring quick access for audits.

4. ELIGIBILITY FOR REIMBURSEMENT

Proper documentation of Right-of-Way (ROW) debris collection, as seen in the sample ticket, meets FEMA's eligibility criteria for public assistance funding. The record of disposal at an approved landfill ensures compliance with environmental and public health requirements. By incorporating FHWA-compliant monitoring, FEMA-eligible documentation practices, and real- time tracking, Dynamic ensures that all debris removal operations adhere to federal funding requirements while expediting reimbursement and maintaining full transparency



FHWA EMERGENCY RELIEF AND FEMA DEBRIS REMOVAL COMPLIANCE

Dynamic employs cutting-edge digital documentation systems to ensure accurate, verifiable, and FEMA-compliant debris management operations. Each Debris Haul Record is meticulously tracked through KrinkleApps-powered technology, capturing critical data points such as ticket number, debris type, truck ID, certified capacity, and sector location. Real-time GPS coordinates at both collection and disposal sites provide transparency in tracking, while timestamped load and haul records document the entire process from pickup to final disposal. The system also incorporates photographic evidence, ensuring compliance with federal, state, and local regulations. In this sample record, debris was collected from a Right-of-Way (ROW) location under the supervision of an assigned monitor, transported 37.2 miles, and disposed of at assigned DMS. By leveraging automated reporting, load verification, and compliance-driven workflows, Dynamic ensures audit-ready documentation, efficient processing, and adherence to FEMA reimbursement requirements for all disaster recovery operations.

CUSTOMER SERVICE APPROACH

Quality, responsive customer service is a critical element of Dynamic's responsibilities. We strive to ensure we properly serve all stakeholders within the communities in which we work. We believe in operating our business with integrity and doing the right thing each and every day.

Dynamic employs a holistic team approach for successful project execution. Our leadership team promotes positive attitudes, proactive problem-solving, and direct communication with all stakeholders to foster collaboration and build trust. We have leveraged unforeseen issues during past projects as opportunities to encourage teamwork to achieve ideal solutions for our clients. Our team solves problems collaboratively, proactively mitigating issues that may contribute to potential customer service issues.

DYNAMIC'S CORPORATE CULTURE OF QUALITY

The Dynamic Corporate Customer Service Program is the foundation of the Dynamic culture of quality for our employees, clients and project stakeholders. Our approach is implemented through standard operating procedures, training, enforcement, and repetition. Additionally, supplemental job aids, checklists, and signature certification requirements ensure all parties are accountable. Dynamic employees receive training on their specific roles and responsibilities, the reporting chain they belong to, and industry best practices applicable to their position. Our training includes the efficient use of all tools, systems, workflows, processes, forms, and job aids, as well as task-specific requirements to complete work accurately, efficiently, and compliantly.

RESPONSIBLE PARTIES

All members of the project team are responsible for quality customer service. Our Field Supervisor serves as the primary field customer service manager who works with the community to ensure that all daily operations proceed as efficiently as possible. The Field Supervisor is responsible for:

- Serving as a single point of contact for customer service concerns in the field
- Coordinating and communicating with the Operations Manager, the City, and the Debris Monitor for debris issues
- Identifying potential customer service issues during the project kickoff meeting
- Managing resources and coordinating with debris staff on customer service issues

SUBCONTRACTING PLAN

Dynamic values integration of local expertise, compliance with FEMA guidelines, and efficient execution of disaster debris management services. All of our subcontractors undergo a rigorous vetting process to verify their qualifications, certifications, and compliance with federal, state, and local regulations. If activated, regular coordination meetings and progress updates will be conducted to maintain alignment and ensure timely delivery of services. Additionally, we will provide training to subcontractors on FEMA documentation protocols, safety standards, and quality assurance measures ensuring accountability and adherence to project specifications. We aim to deliver exceptional results while fostering community collaboration.

TAB 5
PREVIOUS EXPERIENCE

REFERENCES

While Dynamic Group, LLC has been operating as a full-service Disaster Debris Management Contractor for the past eight (8) consecutive years, the company's owner, Josh McCoy, brings over twenty (20) years of direct industry experience. This extensive background ensures that the firm is built on a foundation of proven disaster response leadership, best practices, and long-standing industry relationships. References provided reflect the firm's capabilities and the owner's tenure in the field.

While Dynamic Group, LLC has not served as the primary contractor on a single Disaster Debris Management project exceeding twenty-five million dollars ($25,000,000), the firm has successfully managed and executed large-scale contracts in related areas such as levee stabilization, housing recovery, and logistics, each exceeding $25 million in value. These projects required comparable levels of coordination, compliance, and operational scale, demonstrating our proven capacity to handle high-value, complex disaster response operations.

RE: Reference for Dynamic Construction Group, LLC
Sand, Silt, and Waterway Debris Removal Project
For West Feliciana Parish

To Whom It May Concern:

Dynamic Construction Group (Dynamic) has been a pleasure to work with over the past few years. Upon award of the contract, Dynamic has proven their experience and knowledge in the debris removal field.

Dynamic has been a significant contributor of ideas on how to navigate and remove different types debris – sand/silt, vegetative, etc. They are efficient, resourceful, and understand the needs and constraints of working with the Parish Government.

We look forward to continuing our partnership with Dynamic in the future. If you have any other questions or would like to discuss our recommendation of Dynamic further, please do not hesitate to reach out to my office at (225) 635-3864.

Sincerely,

Kenny Havard, Parish President

Keith Guidry • President **Nicholas Matherne, CFM** • Executive Director

July 15, 2024

To Whom It May Concern:

In the fall of 2021 Hurricane Ida made landfall along Louisiana's coast. Our levee system was in the direct path of the storm which caused millions of dollars of destruction. As a result, over 87,000 CYs of debris was deposited on our 48-mile ring levee system. Dynamic Group secured the bid for removal of this debris. A collaborative agreement between Dynamic Group, FEMA and our agency resulted in Dynamic's burning of approved natural debris which saved our agency (and FEMA) millions of dollars.

The South Lafourche Levee District was very pleased with the professionalism of their work. They removed the debris in accordance with the contract and abided by all laws while doing so. Dynamic worked diligently and effectively to safely clear our levees of all debris to lessen public health, safety, and property, and ensured our regular construction work could continue with minimal interruptions.

I'm pleased to announce that our agency has renewed its contract with Dynamic Group for the year 2024.

Sincerely,

Nic Matherne, CFM
Executive Director

GRAVITY DRAINAGE DISTRICE NO. 5
OF
TANGIPAHOA PARISH

I am writing this letter of recommendation on behalf of Dynamic Construction Group for drainage work completed for our district. Dynamic was represented by Wendell Anthony who has a long relationship with the district.

Over the past several years Dynamic, with Wendell Anthony as supervisor has completed over 20 different canal and creek cleaning projects and cleaned over 30 miles of creek and canals in North Tangipahoa Parish.

I have has a great working relationship with Dynamic and would recommend them on any future projects.

Sincerely

David Sellers

October 29, 2021

To Whom This May Concern:

I would like to take the opportunity to offer a formal recommendation for Dynamic Group, LLC. A company that responded to the difficult challenge of assisting Plaquemines Parish in a monumental task to recover from Hurricane IDA. They immediately responded to the disaster recovery needs. I am completely satisfied with their performance. They do an excellent job, are always addressing every need that arises with superior work ethics. When it comes to handling pressure situations, Dynamic Group, LLC has always proven their deftness in managing tough situations.

While these facts are impressive, it's what is behind the company that is more influential for you. Dynamic Group, LLC has the experience and expertise while handling large projects with character, integrity, and professionalism. The responsiveness you will get with Dynamic Group., LLC and the personal attention they give is a driving force in the success we had with them.

I strongly recommend the services of Dynamic Group, LLC. If you have any questions, please feel free to contact me.

Respectfully yours,

Kirk M. Lepine
Plaquemines Parish President

Re: Reference for Dynamic Group, LLC - Request for Proposal for Emergency Debris Removal Services in Various Calcasieu Parish Drainage Laterals – RFP 2021-PW-153

We strongly recommend the work, experience and knowledge of Dynamic Group, LLC, who is currently performing canal cleaning and clearing work in St. Charles Parish.

Dynamic has quickly mobilized, utilizing its own equipment and labor to self-perform all necessary work to date, providing efficient and local solutions to the project. With experience in canal debris cleaning and clearing and many facets of disaster recovery, Dynamic understands the resources, needs and urgencies of parish governments.

We look forward to continuing to work with Dynamic in St. Charles Parish. If you have any additional questions, please do not hesitate to reach out to my office at 985-783-5000.

Kindest regards,

Michael Palamone
Chief Operating Officer
St. Charles Parish

TAB 6
FINANCIAL CAPABILITY

Dynamic's financial statements on pages 75-141 are marked confidential per Florida Statues F.S. §119.071(1)(b)3

FINANCIAL CAPABILITY

Dynamic Group, LLC has the financial stability and resources to proceed with immediate mobilization for the City's recovery. Backed by a strong financial position, access to internal working capital, and reliable vendor and subcontractor relationships, Dynamic is able to maintain progress and meet urgent timelines without delay. This capacity was clearly demonstrated during the response to Hurricane Ida, where Dynamic began mobilization and debris removal operations immediately, in coordination with local officials, even as formal funding processes were still underway. This approach reflects the company's deep commitment to community recovery, responsiveness under pressure, and the flexibility to support clients when time is critical.

2023 MISSISSIPPI DEBRIS REMOVAL & SIMULTANEOUSLY ACTIVATED CONTRACTS

On March 23, 2023, a catastrophic EF4 tornado with winds reaching 170 mph devastated communities across Mississippi and neighboring states.

The devastating storm ravaged multiple municipalities across the state and generated massive quantities of debris.

The H&S Dynamic Team arrived in Sharkey County the day immediately after the tornado to offer our extensive expertise in disaster response and debris management. Our project managers arrived on site following the incident to conduct comprehensive damage assessments. We worked collaboratively with local, state, and federal stakeholders to develop a plan for safely, swiftly, and efficiently clearing debris from affected areas.

Immediately upon Notice to Proceed, the H&S Dynamic Team worked with the debris monitoring firm to register our pre-mobilized equipment, ensuring a rapid response. We also worked diligently to secure multiple debris management sites (DMS) and final disposal sites.

Overall, our team managed over 600,000 cubic yards of debris within the most impacted municipalities.

In Sharkey County and the City of Rolling Fork, the H&S Dynamic team removed 8,977 loads of vegetative and C&D debris, totaling 447,520 cubic yards. In nearby Humphreys County and Silver City, our team hauled 1,337 loads of mixed vegetative and C&D debris, totaling 161,104 cubic yards.

These contracts were activated simultaneously, exemplifying our commitment to delivering efficient solutions. Local officials and stakeholders have expressed sincere appreciation for our unwavering support and expeditious actions to remove debris and help the communities start rebuilding.

CURRENT AND ANTICIPATED WORKLOAD

Dynamic currently maintains several stand-by contracts for disaster recovery and debris management services; however, these contracts are inactive. Our team currently manages a limited number of active construction and site development projects, which are appropriately staffed and progressing on schedule. Given our current workload and available personnel and equipment, we have sufficient capacity to undertake the scope of work outlined in this RFP. Our operational structure is designed to scale quickly, ensuring rapid mobilization and resource allocation as needed.

FINANCIAL INTEGRITY

Dynamic does not have any past or current bankruptcies. Dynamic also does not have any lawsuits, liens, or judgments that may affect our financial integrity or stability.

ATTN: Bond Capability Letter

Please let this letter serve as confirmation that Dynamic Group, LLC has a single project surety bond limit of $100,000,000 and an aggregate project surety bond limit of $200,000,000 with Fidelity and Deposit Company of Maryland is rated A+ (Superior) with AM Best Company.

Our final decision will be based upon satisfactory review of contract documents, evidence of financing for the work and our overall financial review of Dynamic Group, LLC at the time the bonds are required.

Dynamic Group, LLC has continually demonstrated the ability to deliver projects on time and within budget. We have the utmost confidence in their management and project delivery; thereby, highly recommend Dynamic Group, LLC

This is neither consent of surety nor a bid bond and we assume no liability to you or any other third party if for any reason we decline to execute a bond for Dynamic Group, LLC. This letter is not to be used as a prequalification factor for any type of subcontractor default insurance.

If you have any questions regarding this account, please do not hesitate to call (888) 681-7685.

Sincerely,

Re: Confirmation of Revolving Credit Line for Dynamic Group, LLC

To: Whom It May Concern,

Atlys Global Finance, LLC, is a contractor lending platform, based out of New Jersey, USA. Atlys has entered into a financing agreement with Dynamic Group, LLC

As per the agreement, Atlys will make periodic advances to Dynamic Group, LLC up to 80% of an approved Application for Payment or Purchase Order. Atlys has pre-approved a revolving line of credit up to US**$500,000,000.00 (Five Hundred Million Dollars)** for approved disaster recovery related work with the expectation that Dynamic Group, LLC will use a minimum of 60% of the credit line although the entire line amount is available. Prior to funding the line of credit, Dynamic Group, LLC must identify the repayment resource, i.e. Government Authority, Local Government or Private Foundation. All reasonable costs associated with the application, loan approval and funding process, including but not limited to legal costs, lien searches, background searches, administrative costs and other reasonable costs, are to be paid by Dynamic Group, LLC, of whom shall solely remain liable for such costs and acknowledges and accepts such liability.

The Atlys Global Finance platform is backed by a substantial Senior Debt Facility. Atlys Global Finance, LLC, closed the committed senior debt facility with a large institutional investor for their Federal Contracting Financing Program (FCFP). The FCFP is a response to the substantial need by contractors working in the disaster recovery space. The program provides immediate access to capital through a revolving credit line to contractors that have performed government-approved work. The funding vehicle allows contractors the ability to procure work without the worry of being able to carry project costs for extended periods of time.

The Lender reserves the right to rescind this Letter of Credit at any time without cause.

If you have any questions, please feel free to contact us.

Sincerely,
Timothy J. Touhey

INDEPENDENT ACCOUNTANTS' REVIEW REPORT

To Management
Dynamic Group, LLC
Baton Rouge, Louisiana

We have reviewed the accompanying financial statements of Dynamic Group, LLC (an S Corporation), which comprise the balance sheet as of December 31, 2022, and the related statements of operations, member's equity, and cash flows for the year then ended, and the related notes to the financial statements. A review includes primarily applying analytical procedures to management's financial data and making inquiries of company management. A review is substantially less in scope than an audit, the objective of which is the expression of an opinion regarding the financial statements as a whole. Accordingly, we do not express such an opinion.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement whether due to fraud or error.

Accountant's Responsibility

Our responsibility is to conduct the review engagement in accordance with Statements on Standards for Accounting and Review Services promulgated by the Accounting and Review Services Committee of the AICPA. Those standards require us to perform procedures to obtain limited assurance as a basis for reporting whether we are aware of any material modifications that should be made to the financial statements for them to be in accordance with accounting principles generally accepted in the United States of America. We believe that the results of our procedures provide a reasonable basis for our conclusion.

We are required to be independent of Dynamic Group, LLC and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our review.

Accountant's Conclusion

Based on our review, we are not aware of any material modifications that should be made to the accompanying financial statements in order for them to be in accordance with accounting principles generally accepted in the United States of America.

CONFIDENTIAL

Supplementary Information

The accompanying supplementary information included on pages 14 to 20 is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from, and relates directly to, the underlying accounting and other records used to prepare the financial statements. The supplementary information has been subjected to the review procedures applied in our review of the basic financial statements. We are not aware of any material modifications that should be made to the supplementary information. We have not audited the supplementary information and do not express an opinion on such information.

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2022

SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Company's activities and operating cycle: The Company is engaged in the governmental construction, general building construction, project management and disaster recovery services with an emphasis on heavy/civil construction, storm related recovery and immediate response efforts. The work is performed under fixed price contracts and time and material (unit price) contracts. Projects are located throughout the United States. The length of the Company's contracts varies but is typically less than one year.

Basis of Accounting: The financial statements are prepared on the accrual basis of accounting which is in accordance with generally accepted accounting principles.

Principals of consolidation: The Company has adopted the accounting alternative offered to private companies in FASB ASC 810-17 for variable interest entities under common control. In accordance with this alternative, the Company does not evaluate entities that meet the requirements in the variable interest subsections of FASB ASC 810-10. Instead, the Company discloses the arrangements as required by the accounting alternative. See Related Party Transactions note.

Date of Management's Review: Subsequent events have been evaluated through June 9, 2023, which is the date the financial statements were issued.

Use of Estimates: Management uses estimates and assumptions in preparing these financial statements in accordance with accounting principles generally accepted in the United States of America. Those estimates and assumptions affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities, and the reported revenues and expenses. Actual results could vary from the estimates that were used.

Revenue Recognition: The Company services customers in the governmental construction, general building construction, project management and disaster services projects in the United States. Earned revenue from customers for construction contracts related to those projects totaled $52,810,099 for the year.

The Company recognizes construction contract revenue over time, as performance obligations are satisfied, due to the continuous transfer of control to the customer. Construction contracts are generally accounted for as a single performance obligation. The Company recognizes revenue using the percentage-of-completion method, based primarily on contract cost incurred to date compared to total estimated contract cost. The percentage-of-completion method (an input method) is the most faithful depiction of the Company's performance because it directly measures the value of the services transferred to the customer. The percentage-of-completion method of revenue recognition requires the Company to prepare estimates of cost to complete for contracts in progress. In making such estimates, judgments are required to evaluate contingencies such as potential variances in schedule and the cost of materials, labor cost and productivity, the impact of change orders, liability claims, contract disputes and achievement of contractual performance standards.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2022

Contract assets represent revenue recognized in excess of amounts billed. Those amounts are reclassed to receivables when they are billed under the terms of the contract. Contract liabilities represent amounts billed to clients in excess of revenue recognized to date. The Company anticipates that substantially all incurred cost associated with contract assets as of December 31, 2022, will be billed and collected within one year. Beginning and ending balances of receivables, contract assets, and contract liabilities are as follows:

	2022	2021
Contracts Receivable	$ 6,833,296	$ 36,474,297
Contract Assets	2,089,178	2,260,497
Contract Liabilities	425,176	2,016,371

Payment on contracts is typically due over time in installments, based on project phases as specified in the contracts. Final payment is due when the construction project is complete. The contracts with customers do not contain a significant financing component. The nature of the company's contracts gives rise to variable consideration, such as change orders. The company recognizes revenue for variable consideration when it is probable that a significant reversal in the amount of cumulative revenue recognized will not occur.

Contract Costs: Contract costs included all direct material and labor cost and those indirect costs related to contract performance, such as supplies, tools, travel, and per-diem. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined. Precontract costs are generally charged to cost of revenue as incurred. There were no significant precontract costs for the year ended December 31, 2022. The amount of unapproved change orders included in contract value cannot be reliably estimated and therefore does not result in additional contract revenue.

Cash, Cash Equivalents, Restricted Cash and Statement of Cash Flows: The Company considers all highly liquid debt instruments purchased with maturities of three months or less to be cash equivalents. In accordance with Accounting Standards Update (ASU) 2016-18, "Restricted Cash", the following table provides a reconciliation of cash and cash equivalents reported within the balance sheet to the amounts presented in the statement of cash flows:

	2022	2021
Cash and Cash Equivalents	$ 7,902,008	$ 5,355,919
Funds Held in Escrow	0	1,045,740
	$ 7,902,008	$ 6,401,659

Fair Value Measurements: The Company's financial instruments are measured at estimated fair value using inputs from among the three levels of the fair value hierarchy as follows:

Level 1 inputs: Quoted prices in active markets for identical assets or liabilities, which prices are available at the measurement date.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2022

Level 2 inputs: Includes quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (i.e. interest rates, yield curves, etc.) and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level 3 inputs: Unobservable inputs that reflect management's estimates about the assumptions that market participants would use in pricing the asset or liability. These inputs are developed based on the best information available, including internally-developed data.

Advertising: The Company expenses advertising costs as they are incurred. The Company expensed advertising costs of $65,248 in 2022.

Accounts receivable: Receivables are charged to bad debt expense when they are determined to be uncollectible based upon a periodic review of the accounts by management. Accounting principles generally accepted in the United States of America require that the allowance method be used to recognize bad debts; however, the effect of using the direct write-off method is not materially different from the results that would have been obtained under the allowance method. There were no significant uncollectible accounts at December 31, 2022.

Fixed assets and depreciation: The Company's improvements and personal property are stated at cost. Improvements are capitalized, while expenditures for maintenance and repairs are charged to expense as incurred. Depreciation is provided by the straight-line method over the estimated useful life of the asset. Depreciation for the year is $343,814.

Vehicles	5 years
Furniture, Fixtures, and Equipment	5-10 years

Accrued compensation: Accrued expenses for compensated absences, vacations, and sick pay are not shown due to the fact that amount of the liability cannot be reasonably estimated. It is the Company's policy to expense these items when they are incurred.

Interest: The Company has expensed all interest, and none has been capitalized.

Income taxes: The Company, with the consent of its members, has elected under the Internal Revenue Code (IRC) to be an "S" Corporation. Under the provisions of the IRC, the Company is not a taxable entity and, accordingly the net income of the Company is included in the income tax returns of the member. The Company files tax returns in the U.S. federal jurisdiction and various states. Federal and state tax authorities generally have the right to examine and audit the previous three years of tax returns filed. There are no interest and penalties related to income taxes recognized in the statement of operations. The Company has not taken any tax positions that would significantly increase or decrease any unrecognized tax benefit within twelve months of the reporting date.

CONTRACTS RECEIVABLE

Contracts receivables billed:

Completed contracts	$	2,743,414
Uncompleted Contracts		4,089,882
Receivables Financed with Atlys Global		1,560,000
Total	$	8,393,296

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2022

FINANCING OF ACCOUNTS RECEIVABLE

During the period, the company began enlisting the services of Atlys Global for the financing of certain receivable balances. Upon financing the receivables, Atlys Global pays the company 80% of the receivable's face value up front. Additionally, when the receivables are paid by the client Atlys Global will keep the 80% face value of the receivable it initially fronted the company plus a portion of the receivable as fees for services rendered and the company will keep the remaining portion. The amount of fees collected by Atlys Global varies depending on how long the client takes to pay the receivable balance. Based on all available information regarding these balances, management estimates that the company will collect $1,560,000 from these financed receivables.

DESCRIPTION OF LEASING ARRANGEMENT

On January 1, 2022 the Company adopted Accounting Standards Update (ASU) 2016-02, "Leases (Topic 842)". The guidance requires that the lessee should recognize the assets and liabilities that arise from all leases over 12 months in duration. For leases with durations less than 12 months, a lessee is permitted to make a policy election, by class of underlying asset, not to recognize the related assets and liabilities. If this election is made, the lessees will recognize the lease expense on a straight-line basis over the lease term.

The Company leases office space in Baton Rouge, LA from SonCo Capital, LLC who is solely owned by the member of the Company. As of January 1, 2022, there is no formal lease agreement. Rents charged total to $6,552 per month. See Related Party Transactions note.

LINE OF CREDIT

The first United Community Bank line of credit is also for eighty percent (80%) of eligible accounts receivables not to exceed $7.5 million. The second United Community Bank line of credit is for $2.5 million. Interest on both lines of credit is payable monthly at a rate of 4.00% - 5.25% on each outstanding principal balance.

The first United Community Bank line of credit matured on October 14, 2022 and was paid in full. As of December 31, 2022 the second line of credit has a balance of $2,500,000. These lines of credit are secured by accounts receivable and a personal guarantee of the member and deposits of $2.5 million with this financial institution.

Under the agreements with the financial institution, the Company is required to maintain certain financial ratios as well as other customary conditions and events of default.

Billings in Excess of Costs & Estimated Earnings on Uncompleted Contracts (Contract Liabilities)	(425,176)
	$ 1,664,002

CONCENTRATION OF CREDIT RISK

The Company maintains its cash in bank deposit accounts at United Community Bank, Hancock Whitney Bank, and Home Bank, which at times may exceed federally insured limits. The Company has $2,252,846 and $5,279,522 cash at risk in excess of the $250,000 FDIC guarantee at United Community Bank and Hancock Whitney Bank, respectively. The Company has not experienced any losses in such accounts.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2022

RELATED PARTY TRANSACTIONS

SonCo Capital, LLC is solely owned by the member of the Company. The Company entered into a informal lease agreement with SonCo Capital, LLC, to lease an office building for $12,600 per month. For the period ended December 31, 2022 the amount of rent charged by SonCo Capital, LLC to the company was $78,624. Rather than paying the rent to SonCo Capital, LLC, the company instead elected to forgive the balance of its loan receivable from Sonco Capital, LLC in the amount of the monthly rent.

MCC Logistics, LLC is solely owned by the member of the Company. The Company rents vehicles and equipment from MCC Logistics, LLC on an as needed basis. The Company paid MCC Logistics, LLC $63,218 during 2022.

Southland Construction, LLC is solely owned by the member of the Company. The Company utilized employees of Southland Construction, LLC on an as needed basis. The Company paid Southland Construction, LLC $2,383,151 during 2022.

During 2022, related entities solely owned by the member of the Company paid management fees to the Company of $360,000.

As mentioned in the Summary of Significant Accounting Policies note, none of these entities are included in these financial statements.

RELATED PARTY LOANS RECEIVABLE

During the period, the company began lending its excess cash to related parties. The related party loans bear interest with a rate that varies based on the federal prime rate. As of December 31, 2022, the interest rate on the loans receivable is 7.0%. As of December 31, 2022 the cumulative balances for loans and interest receivable are $12,856,805 and $448,573 respectively. A detailed schedule of balances has been included in the supplemental information.

BACKLOG

Backlog represents the amount of the transaction prices allocated to the remaining performance obligations as of December 31, 2022. Backlog includes revenues expected to realize from work to be performed on uncompleted contracts and signed contracts on which work has not yet begun. Backlog at December 31, 2022 was approximately $28,438,126.

INDEPENDENT ACCOUNTANTS' REVIEW REPORT

To Management
Dynamic Group, LLC
Baton Rouge, Louisiana

We have reviewed the accompanying financial statements of Dynamic Group, LLC (an S Corporation), which comprise the balance sheet as of December 31, 2023, and the related statements of operations, member's equity, and cash flows for the year then ended, and the related notes to the financial statements. A review includes primarily applying analytical procedures to management's financial data and making inquiries of company management. A review is substantially less in scope than an audit, the objective of which is the expression of an opinion regarding the financial statements as a whole. Accordingly, we do not express such an opinion.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement whether due to fraud or error.

Accountant's Responsibility

Our responsibility is to conduct the review engagement in accordance with Statements on Standards for Accounting and Review Services promulgated by the Accounting and Review Services Committee of the AICPA. Those standards require us to perform procedures to obtain limited assurance as a basis for reporting whether we are aware of any material modifications that should be made to the financial statements for them to be in accordance with accounting principles generally accepted in the United States of America. We believe that the results of our procedures provide a reasonable basis for our conclusion.

We are required to be independent of Dynamic Group, LLC and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our review.

Accountant's Conclusion

Based on our review, we are not aware of any material modifications that should be made to the accompanying financial statements in order for them to be in accordance with accounting principles generally accepted in the United States of America.

CONFIDENTIAL

Supplementary Information

The accompanying supplementary information included on pages 14 to 19 is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from, and relates directly to, the underlying accounting and other records used to prepare the financial statements. The supplementary information has been subjected to the review procedures applied in our review of the basic financial statements. We are not aware of any material modifications that should be made to the supplementary information. We have not audited the supplementary information and do not express an opinion on such information.

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2023

SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Company's activities and operating cycle: The Company is engaged in the governmental construction, general building construction, project management and disaster recovery services with an emphasis on heavy/civil construction, storm related recovery and immediate response efforts. The work is performed under fixed price contracts and time and material (unit price) contracts. Projects are located throughout the United States. The length of the Company's contracts varies but is typically less than one year.

Basis of Accounting: The financial statements are prepared on the accrual basis of accounting which is in accordance with generally accepted accounting principles.

Principals of consolidation: The Company has adopted the accounting alternative offered to private companies in FASB ASC 810-17 for variable interest entities under common control. In accordance with this alternative, the Company does not evaluate entities that meet the requirements in the variable interest subsections of FASB ASC 810-10. Instead, the Company discloses the arrangements as required by the accounting alternative. See Related Party Transactions note.

Date of Management's Review: Subsequent events have been evaluated through May 17, 2024 which is the date the financial statements were issued.

Use of Estimates: Management uses estimates and assumptions in preparing these financial statements in accordance with accounting principles generally accepted in the United States of America. Those estimates and assumptions affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities, and the reported revenues and expenses. Actual results could vary from the estimates that were used.

Revenue Recognition: The Company services customers in the governmental construction, general building construction, project management and disaster services projects in the United States. Earned revenue from customers for construction contracts related to those projects totaled $74,006,788 for the year.

The Company recognizes construction contract revenue over time, as performance obligations are satisfied, due to the continuous transfer of control to the customer. Construction contracts are generally accounted for as a single performance obligation. The Company recognizes revenue using the percentage-of-completion method, based primarily on contract cost incurred to date compared to total estimated contract cost. The percentage-of-completion method (an input method) is the most faithful depiction of the Company's performance because it directly measures the value of the services transferred to the customer. The percentage-of-completion method of revenue recognition requires the Company to prepare estimates of cost to complete for contracts in progress. In making such estimates, judgments are required to evaluate contingencies such as potential variances in schedule and the cost of materials, labor cost and productivity, the impact of change orders, liability claims, contract disputes and achievement of contractual performance standards.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2023

Contract assets represent revenue recognized in excess of amounts billed. Those amounts are reclassed to receivables when they are billed under the terms of the contract. Contract liabilities represent amounts billed to clients in excess of revenue recognized to date. The Company anticipates that substantially all incurred cost associated with contract assets as of December 31, 2023, will be billed and collected within one year. Beginning and ending balances of receivables, contract assets, and contract liabilities are as follows:

	2023	2022
Contracts Receivable	$ 13,117,775	$ 6,833,296
Contract Assets	7,855,216	2,089,178
Contract Liabilities	5,283,168	425,176

Payment on contracts is typically due over time in installments, based on project phases as specified in the contracts. Final payment is due when the construction project is complete. The contracts with customers do not contain a significant financing component. The nature of the company's contracts gives rise to variable consideration, such as change orders. The company recognizes revenue for variable consideration when it is probable that a significant reversal in the amount of cumulative revenue recognized will not occur.

Contract Costs: Contract costs included all direct material and labor cost and those indirect costs related to contract performance, such as supplies, tools, travel, and per-diem. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined. Precontract costs are generally charged to cost of revenue as incurred. There were no significant precontract costs for the year ended December 31, 2023. The amount of unapproved change orders included in contract value cannot be reliably estimated and therefore does not result in additional contract revenue.

Cash, Cash Equivalents, Restricted Cash and Statement of Cash Flows: The Company considers all highly liquid debt instruments purchased with maturities of three months or less to be cash equivalents. The following table provides a reconciliation of cash, cash equivalents, and restricted cash reported within the balance sheet to the amounts presented in the statement of cash flows:

	2023	2022
Cash and Cash Equivalents	$ 2,239,710	$ 7,902,008
	$ 2,239,710	$ 7,902,008

Fair Value Measurements: The Company's financial instruments are measured at estimated fair value using inputs from among the three levels of the fair value hierarchy as follows:

Level 1 inputs: Quoted prices in active markets for identical assets or liabilities, which prices are available at the measurement date.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2023

Level 2 inputs: Includes quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (i.e. interest rates, yield curves, etc.) and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level 3 inputs: Unobservable inputs that reflect management's estimates about the assumptions that market participants would use in pricing the asset or liability. These inputs are developed based on the best information available, including internally-developed data.

Advertising: The Company expenses advertising costs as they are incurred. The Company expensed advertising costs of $32,619 in 2023.

Accounts receivable: Receivables are charged to bad debt expense when they are determined to be uncollectible based upon a periodic review of the accounts by management. Accounting principles generally accepted in the United States of America require that the allowance method be used to recognize bad debts; however, the effect of using the direct write-off method is not materially different from the results that would have been obtained under the allowance method. There were no significant uncollectible accounts at December 31, 2023.

Fixed assets and depreciation: The Company's improvements and personal property are stated at cost. Improvements are capitalized, while expenditures for maintenance and repairs are charged to expense as incurred. Depreciation is provided by the straight-line method over the estimated useful life of the asset. Depreciation for the year is $388,882.

Vehicles	5 years
Furniture, Fixtures, and Equipment	5-10 years

Accrued compensation: Accrued expenses for compensated absences, vacations, and sick pay are not shown due to the fact that amount of the liability cannot be reasonably estimated. It is the Company's policy to expense these items when they are incurred.

Interest: The Company has expensed all interest, and none has been capitalized.

Income taxes: The Company, with the consent of its members, has elected under the Internal Revenue Code (IRC) to be an "S" Corporation. Under the provisions of the IRC, the Company is not a taxable entity and, accordingly the net income of the Company is included in the income tax returns of the member. The Company files tax returns in the U.S. federal jurisdiction and various states. Federal and state tax authorities generally have the right to examine and audit the previous three years of tax returns filed. There are no interest and penalties related to income taxes recognized in the statement of operations. The Company has not taken any tax positions that would significantly increase or decrease any unrecognized tax benefit within twelve months of the reporting date.

CONTRACTS RECEIVABLE

Contracts receivables billed:

Completed contracts	$	9,441,047
Uncompleted Contracts		3,676,729
Receivables Financed with Atlys Global		1,362,560
Total	$	14,480,336

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2023

SUPPMENTAL DISCLOSURE OF CASH FLOW INFORMATION
Cash paid or received during the period for:

Interest income received	$	1,436,228
Interest paid		3,377,471

Several pieces of equipment were purchased for the total amount of $660,814. A non-cash transaction for this amount was made with the issuance of four notes payable.

FINANCING OF ACCOUNTS RECEIVABLE
During the period, the company began enlisting the services of Atlys Global for the financing of certain receivable balances. Upon financing the receivables, Atlys Global pays the company 80% of the receivable's face value up front. Additionally, when the receivables are paid by the client Atlys Global will keep the 80% face value of the receivable it initially fronted the company plus a portion of the receivable as fees for services rendered and the company will keep the remaining portion. The amount of fees collected by Atlys Global varies depending on how long the client takes to pay the receivable balance. Based on all available information regarding these balances, management estimates that the company will collect $1,362,560 from these financed receivables.

DESCRIPTION OF LEASING ARRANGEMENT
The Company has adopted Accounting Standards Update (ASU) 2016-02, "Leases (Topic 842)". The guidance requires that the lessee should recognize the assets and liabilities that arise from all leases over 12 months in duration. For leases with durations less than 12 months, a lessee is permitted to make a policy election, by class of underlying asset, not to recognize the related assets and liabilities. If this election is made, the lessees will recognize the lease expense on a straight-line basis over the lease term.

The Company leases office space in Baton Rouge, LA from SonCo Capital, LLC who is solely owned by the member of the Company. As of December 31, 2023, there is no formal lease agreement. Rents charged total to $12,600 per month. See Related Party Transactions note.

LINE OF CREDIT
At the beginning of the period the company had a line of credit with United Community Bank with a balance of $2,500,000 which was paid in full. There are no open lines of credit as of December 31, 2023.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2023

RELATED PARTY TRANSACTIONS

SonCo Capital, LLC is solely owned by the member of the Company. The Company entered into a informal lease agreement with SonCo Capital, LLC, to lease an office building for $12,600 per month. For the period ended December 31, 2023 the amount of rent charged by SonCo Capital, LLC to the company was $71,400.

Southland Construction, LLC is solely owned by the member of the Company. The Company utilized employees of Southland Construction, LLC on an as needed basis. The Company paid Southland Construction, LLC $704,398 during 2023.

During the Period, all Southland Construction, LLC employees were moved to McCoy Group Services, LLC, which is solely owned by the member of the company. The Company paid McCoy Group Services, LLC $2,158,542 during 2023.

As mentioned in the Summary of Significant Accounting Policies note, none of these entities are included in these financial statements.

RELATED PARTY LOANS RECEIVABLE

During 2022, the company began lending its excess cash to related parties. The related party loans bear interest with a rate that varies based on the federal prime rate. As of December 31, 2023, the interest rate on the loans receivable is 7.5%. As of December 31, 2023 the cumulative balances for loans and interest receivable are $20,823,757 and $1,835,830, respectively. A detailed schedule of balances has been included in the supplemental information.

BACKLOG

Backlog represents the amount of the transaction prices allocated to the remaining performance obligations as of December 31, 2023. Backlog includes revenues expected to realize from work to be performed on uncompleted contracts and signed contracts on which work has not yet begun. Backlog at December 31, 2023 was approximately $216,819,441.

INDEPENDENT ACCOUNTANTS' REVIEW REPORT

To Management
Dynamic Group, LLC
Baton Rouge, Louisiana

We have reviewed the accompanying financial statements of Dynamic Group, LLC (an S Corporation), which comprise the balance sheet as of December 31, 2024, and the related statements of operations, member's equity, and cash flows for the year then ended, and the related notes to the financial statements. A review includes primarily applying analytical procedures to management's financial data and making inquiries of company management. A review is substantially less in scope than an audit, the objective of which is the expression of an opinion regarding the financial statements as a whole. Accordingly, we do not express such an opinion.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement whether due to fraud or error.

Accountant's Responsibility

Our responsibility is to conduct the review engagement in accordance with Statements on Standards for Accounting and Review Services promulgated by the Accounting and Review Services Committee of the AICPA. Those standards require us to perform procedures to obtain limited assurance as a basis for reporting whether we are aware of any material modifications that should be made to the financial statements for them to be in accordance with accounting principles generally accepted in the United States of America. We believe that the results of our procedures provide a reasonable basis for our conclusion.

We are required to be independent of Dynamic Group, LLC and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our review.

Accountant's Conclusion

Based on our review, we are not aware of any material modifications that should be made to the accompanying financial statements in order for them to be in accordance with accounting principles generally accepted in the United States of America.

CONFIDENTIAL

Supplementary Information

The accompanying supplementary information included on pages 15 to 19 is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from, and relates directly to, the underlying accounting and other records used to prepare the financial statements. The supplementary information has been subjected to the review procedures applied in our review of the basic financial statements. We are not aware of any material modifications that should be made to the supplementary information. We have not audited the supplementary information and do not express an opinion on such information.

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2024

SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Company's activities and operating cycle: The Company is engaged in the governmental construction, general building construction, project management and disaster recovery services with an emphasis on heavy/civil construction, storm related recovery and immediate response efforts. The work is performed under fixed price contracts and time and material (unit price) contracts. Projects are located throughout the United States. The length of the Company's contracts varies but is typically less than one year.

Basis of Accounting: The financial statements are prepared on the accrual basis of accounting which is in accordance with generally accepted accounting principles.

Principals of consolidation: The Company has adopted the accounting alternative offered to private companies in FASB ASC 810-17 for variable interest entities under common control. In accordance with this alternative, the Company does not evaluate entities that meet the requirements in the variable interest subsections of FASB ASC 810-10. Instead, the Company discloses the arrangements as required by the accounting alternative. See Related Party Transactions note.

Date of Management's Review: Subsequent events have been evaluated through March 21, 2025 which is the date the financial statements were issued.

Use of Estimates: Management uses estimates and assumptions in preparing these financial statements in accordance with accounting principles generally accepted in the United States of America. Those estimates and assumptions affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities, and the reported revenues and expenses. Actual results could vary from the estimates that were used.

Revenue Recognition: The Company services customers in the governmental construction, general building construction, project management and disaster services projects in the United States. Earned revenue from customers for construction contracts related to those projects totaled $253,637,563 for the year.

The Company recognizes construction contract revenue over time, as performance obligations are satisfied, due to the continuous transfer of control to the customer. Construction contracts are generally accounted for as a single performance obligation. The Company recognizes revenue using the percentage-of-completion method, based primarily on contract cost incurred to date compared to total estimated contract cost. The percentage-of-completion method (an input method) is the most faithful depiction of the Company's performance because it directly measures the value of the services transferred to the customer. The percentage-of-completion method of revenue recognition requires the Company to prepare estimates of cost to complete for contracts in progress. In making such estimates, judgments are required to evaluate contingencies such as potential variances in schedule and the cost of materials, labor cost and productivity, the impact of change orders, liability claims, contract disputes and achievement of contractual performance standards.

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2024

Contract assets represent revenue recognized in excess of amounts billed. Those amounts are reclassed to receivables when they are billed under the terms of the contract. Contract liabilities represent amounts billed to clients in excess of revenue recognized to date. The Company anticipates that substantially all incurred cost associated with contract assets as of December 31, 2024, will be billed and collected within one year. Beginning and ending balances of receivables, contract assets, and contract liabilities are as follows:

	2024	2023
Contracts Receivable	$ 57,192,977	$ 13,117,775
Contract Assets	30,992,603	7,855,216
Contract Liabilities	5,063,352	5,283,168

Payment on contracts is typically due over time in installments, based on project phases as specified in the contracts. Final payment is due when the construction project is complete. The contracts with customers do not contain a significant financing component. The nature of the company's contracts gives rise to variable consideration, such as change orders. The company recognizes revenue for variable consideration when it is probable that a significant reversal in the amount of cumulative revenue recognized will not occur.

Contract Costs: Contract costs included all direct material and labor cost and those indirect costs related to contract performance, such as supplies, tools, travel, and per-diem. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined. Precontract costs are generally charged to cost of revenue as incurred. There were no significant precontract costs for the year ended December 31, 2024. The amount of unapproved change orders included in contract value cannot be reliably estimated and therefore does not result in additional contract revenue.

Cash, Cash Equivalents, Restricted Cash and Statement of Cash Flows: The Company considers all highly liquid debt instruments purchased with maturities of three months or less to be cash equivalents. The following table provides a reconciliation of cash, cash equivalents, and restricted cash reported within the balance sheet to the amounts presented in the statement of cash flows:

	2024	2023
Cash and Cash Equivalents	$ 8,906,464	$ 2,239,710
	$ 8,906,464	$ 2,239,710

Fair Value Measurements: The Company's financial instruments are measured at estimated fair value using inputs from among the three levels of the fair value hierarchy as follows:

Level 1 inputs: Quoted prices in active markets for identical assets or liabilities, which prices are available at the measurement date.

CONFIDENTIAL

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2024

Level 2 inputs: Includes quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (i.e. interest rates, yield curves, etc.) and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level 3 inputs: Unobservable inputs that reflect management's estimates about the assumptions that market participants would use in pricing the asset or liability. These inputs are developed based on the best information available, including internally-developed data.

Advertising: The Company expenses advertising costs as they are incurred. The Company expensed advertising costs of $37,204 in 2024.

Accounts receivable: Receivables are charged to bad debt expense when they are determined to be uncollectible based upon a periodic review of the accounts by management. Accounting principles generally accepted in the United States of America require that the allowance method be used to recognize bad debts; however, the effect of using the direct write-off method is not materially different from the results that would have been obtained under the allowance method. There were no significant uncollectible accounts at December 31, 2024.

Fixed assets and depreciation: The Company's improvements and personal property are stated at cost. Improvements are capitalized, while expenditures for maintenance and repairs are charged to expense as incurred. Depreciation is provided by the straight-line method over the estimated useful life of the asset. Depreciation for the year is $1,517,451.

Vehicles	5 years
Furniture, Fixtures, and Equipment	5-10 years

Accrued compensation: Accrued expenses for compensated absences, vacations, and sick pay are not shown due to the fact that amount of the liability cannot be reasonably estimated. It is the Company's policy to expense these items when they are incurred.

Interest: The Company has expensed all interest, and none has been capitalized.

Income taxes: The Company, with the consent of its members, has elected under the Internal Revenue Code (IRC) to be an "S" Corporation. Under the provisions of the IRC, the Company is not a taxable entity and, accordingly the net income of the Company is included in the income tax returns of the member. The Company files tax returns in the U.S. federal jurisdiction and various states. Federal and state tax authorities generally have the right to examine and audit the previous three years of tax returns filed. There are no interest and penalties related to income taxes recognized in the statement of operations. The Company has not taken any tax positions that would significantly increase or decrease any unrecognized tax benefit within twelve months of the reporting date.

CONTRACTS RECEIVABLE

Contracts receivables billed:

Completed contracts	$	57,164,158
Uncompleted Contracts		28,819
Receivables Financed with Atlys Global		9,768,462
Total	$	66,961,439

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2024

SUPPMENTAL DISCLOSURE OF CASH FLOW INFORMATION
Cash paid or received during the period for:

Interest income received	$	54,156
Interest paid		2,740,067

Several pieces of equipment were purchased from MCC Rentals, LLC for the total amount of $6,543,741, which was the net book value of the assets. Dynamic Group, LLC forgave the note receivable from MCC Rentals, LLC instead of paying cash for the equipment. Additionally, Dynamic Group, LLC assumed all of the notes payable for any of the equipment that was financed.

FINANCING OF ACCOUNTS RECEIVABLE
During the period, the company began enlisting the services of Atlys Global for the financing of certain receivable balances. Upon financing the receivables, Atlys Global pays the company 80% of the receivable's face value up front. Additionally, when the receivables are paid by the client Atlys Global will keep the 80% face value of the receivable it initially fronted the company plus a portion of the receivable as fees for services rendered and the company will keep the remaining portion. The amount of fees collected by Atlys Global varies depending on how long the client takes to pay the receivable balance. Based on all available information regarding these balances, management estimates that the company will collect $9,768,462 from these financed receivables.

DESCRIPTION OF LEASING ARRANGEMENT
The Company has adopted Accounting Standards Update (ASU) 2016-02, "Leases (Topic 842)". The guidance requires that the lessee should recognize the assets and liabilities that arise from all leases over 12 months in duration. For leases with durations less than 12 months, a lessee is permitted to make a policy election, by class of underlying asset, not to recognize the related assets and liabilities. If this election is made, the lessees will recognize the lease expense on a straight-line basis over the lease term.

The Company leases office space in Baton Rouge, LA from SonCo Capital, LLC which is solely owned by the member of the Company. As of December 31, 2024, there is no formal lease agreement. Rents charged total to $12,600 per month. See Related Party Transactions note.

The Company leases a 2020 Bombardier Challenger 350 aircraft from Dynamic Aero, LLC which is solely owned by the member of the Company. The lease began on December 1, 2024 and ends on November 30, 2025. Rents charged total to $142,000 per month. See Related Party Transactions note.

LINE OF CREDIT
There are no open lines of credit as of December 31, 2024.

CONTRACTS IN PROGRESS

A summary of costs and estimated earnings on uncompleted contracts at December 31, 2024 is as follows:

Costs of Uncompleted Contracts	$ 207,892,678
Estimated Earnings Thereon	68,083,761
	275,976,439
Less Amounts Billed	250,047,188
	$ 25,929,251

Costs and estimated earnings on uncompleted contracts at December 31, 2024 are included in the accompanying balance sheets under the following captions:

Costs & Estimated Earnings in Excess of Billings on Uncompleted Contracts (Contract Assets)	$ 30,992,603
Billings in Excess of Costs & Estimated Earnings on Uncompleted Contracts (Contract Liabilities)	(5,063,352)
	$ 25,929,251

CONCENTRATION OF CREDIT RISK

The Company maintains its cash in bank deposit accounts at United Community Bank, Hancock Whitney Bank, Home Bank, and BB Americas, which at times may exceed federally insured limits. The Company has $1,601,985, $6,253,944, and $390,851 cash at risk in excess of the $250,000 FDIC guarantee at Home Bank, Hancock Whitney Bank, and BB Americas Bank, respectively. The Company has not experienced any losses in such accounts.

DYNAMIC GROUP, LLC

NOTES TO THE FINANCIAL STATEMENTS

DECEMBER 31, 2024

RELATED PARTY TRANSACTIONS

SonCo Capital, LLC is solely owned by the member of the Company. The Company entered into an informal lease agreement with SonCo Capital, LLC, to lease an office building for $12,600 per month. For the period ended December 31, 2024 the amount of rent charged by SonCo Capital, LLC to the company was $151,200.

McCoy Group Services, LLC is solely owned by the member of the Company. The Company utilized employees of McCoy Group Services, LLC on an as needed basis. The Company paid McCoy Group Services, LLC $1,597,314 during 2024.

On December 1, 2024 the company entered into a one year lease agreement with Dynamic Aero, LLC for a 2020 Bombardier Challenger 350 aircraft. Per the lease agreement the company will be charged a fixed amount of $142,000 per month. The Company will be responsible for contracting or employing pilots and crew along with expenses incidental to operation of the aircraft. Dynamic Aero, LLC shall be responsible for servicing the loan secured by the aircraft along with insurance, hangar, maintenance, and taxes. The Company paid Dynamic Aero, LLC $142,000 during 2024 for the month of December 2024 which is included in travel expense shown in the supplemental information.

As mentioned in the Summary of Significant Accounting Policies note, none of these entities are included in these financial statements.

RELATED PARTY LOANS RECEIVABLE

During 2022, the company began lending its excess cash to related parties. The related party loans bear interest with a rate that varies based on the federal prime rate. As of December 31, 2024, the interest rate on the loans receivable is 7.75%. As of December 31, 2024 the cumulative balances for loans and interest receivable are $16,922,294 and $1,379,321 respectively. A detailed schedule of balances has been included in the supplemental information. During 2024, the Company forgave principal and interest owed from several related parties. Given that the entities have common ownership to the Company, principal amounts forgiven are included in distributions. The forgiven interest is included in bad debt expense shown on the schedule of Selling, General, and Administrative Expenses included in the supplemental information.

BACKLOG

Backlog represents the amount of the transaction prices allocated to the remaining performance obligations as of December 31, 2024. Backlog includes revenues expected to realize from work to be performed on uncompleted contracts and signed contracts on which work has not yet begun. Backlog at December 31, 2024 was approximately $270,920,787.

DISASTER DEBRIS REMOVAL AND DISPOSAL SERVICES RFP# 25-05-PW

COST PROPOSAL

Items will be used for evaluation purposes only. Quantities are not guaranteed and are used for evaluation purposes only. Prices shall be all-inclusive of requirements as defined in the scope of work. All labor rates are to be fully burdened to include all taxes, benefits, handling charges, overhead, and profits.

ELIGIBLE VEGETATIVE DEBRIS REMOVAL Work consists of the collection of transportation of Eligible Vegetative Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$8.25	3,940,000	$32,505,000.00
16-30 miles	$8.25	500,000	$4,125,000.00
31-60 miles	$8.25	50,000	$412,500.00
61+ miles	$8.25	10,000	$82,500.00

ELIGIBLE C&D DEBRIS REMOVAL Work consists of the collection of transportation of Eligible C&D Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$8.45	50,000	$422,500.00
16-30 miles	$8.95	700,000	$6,265,000.00
31-60 miles	$10.25	700,000	$7,175,000.00
61+ miles	$11.50	50,000	$575,000.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF NON-RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible Non-RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$18.75	10,000	$187,500.00
16-30 miles	$19.75	90,000	$1,777,500.00

31-60 miles	$21.05	90,000	$1,894,500.00
61+ miles	$22.55	10,000	$225,500.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$28.75	10,000	$287,500.00
16-30 miles	$29.75	90,000	$2,677,500.00
31-60 miles	$31.05	90,000	$2,794,500.00
61+ miles	$32.55	10,000	$325,500.00

DDMS SITE MANAGEMENT, OPERATIONS AND REDUCTION Work consists of managing and operating DDMS sites and reducing Eligible disaster debris through grinding or source separation and reduction. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Grinding	$5.10	4,400,000	$22,440,000.00

DDMS SITE MANAGEMENT AND REDUCTION OF VEGETATIVE DEBRIS THROUGH AIR CURTAIN INCINERATORS Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through air curtain incinerators. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$4.25	50,000	$215,500.00

DDMS Site Management and Reduction of Vegetative Debris Through Controlled Open Burning Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through controlled open burning. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$3.75	50,000	$187,500.00

Haul-out of Reduced Eligible Debris to a County Designated Final Disposal Site Work consists of loading and transporting reduced Eligible disaster related debris from a City approved DDMS site to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$5.50	100,000	$550,000.00
16-30 miles	$6.50	450,000	$2,925,000.00
31-60 miles	$7.50	450,000	$3,375,000.00
61+ miles	$8.50	120,500	$1,084,500.00

Removal of Eligible Hazardous Leaning Trees and Hanging Limbs Work consists of removing Eligible hazardous trees or limbs and placing them on the safest possible location on the ROW for collection under the terms and conditions of Scope of Services, Eligible Vegetative Debris Removal.	Price per Tree	Estimated Total Units	TOTAL
6" to 12" diameter	$200.00	200	$40,000.00
13" to 24" diameter	$200.00	500	$100,000.00
25" to 36" diameter	$200.00	200	$40,000.00
37" to 48" diameter	$200.00	100	$20,000.00
49" and larger diameter	$200.00	50	$10,000.00

REMOVAL OF ELIGIBLE HAZARDOUS STUMPS Work consists of removing Eligible hazardous stumps and transporting resulting debris on the ROW to a City approved DDMS site or City Final Disposal Site. Contractor to backfill all stump holes.	Price per Stump	Estimated Total Units	TOTAL
25" to 36" diameter	$200.00	100	$20,000.00
37" to 48" diameter	$400.00	50	$20,000.00
49" and larger diameter	$800.00	50	$40,000.00

TRANSPORT & DISPOSAL Work consists of the removal, transportation and disposal of Eligible Household Hazardous Waste (HHW). City to designate specific materials to be collected as part of HHW program.	Price per CY	Price Per LB	TOTAL
Cost Per Pound	$400.00	$7.75	

ELIGIBLE ROW WHITE GOODS DEBRIS REMOVAL Work consists of the removal of Eligible White Goods from the ROW to a designated City approved DDMS Site. Contractor shall be responsible for recovering/disposing refrigerants as required by law as well as unit decontamination in a contained area. The Contractor shall also be responsible for the transportation of Eligible White Goods from the designated County approved DDMS site to an approved designated facility for recycling. Contractor shall record any revenue resulting from recycling efforts as a credit to the City on invoices.	Price per Unit	Estimated Total Units	TOTAL
Refrigerators, freezers, and other items requiring refrigerant recovery and decontamination	$50.00	500	$25,000.00
All other white goods	$45.00	500	$20,000.00
		1000	

ELIGIBLE E-WASTE ITEM REMOVAL Work consists of the recovery and disposal of televisions, computers, computer monitors unless otherwise specified in writing by the City.	Price per Unit	Estimated Total Units	TOTAL
Cost per unit	$25.00	500	$12,500.00

ELIGIBLE DEAD ANIMAL CARCASSES Work consists of the recovery and disposal of dead animal carcasses.	Price per Unit	Estimated Total Units	TOTAL
Small animals less than 100 pounds	$5.00	950	$4,750.00
Large animals more than 101 pounds	$65.00	50	$3,250.00
		1000	

WATERWAYS DEBRIS REMOVAL Work consists of the removal, transportation and lawful processing and/or disposal of debris collected from waterways and drainage systems to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY *Land Based Operations	Estimated Total Units	TOTAL
Cubic yard	$75.00	10,000	$750,000.00

SOIL/SAND/BEACH SCREENING Work consists of the collection of Eligible debris laden sand from City beaches, transportation to a processing screen, processing of sand through a screen, maintenance of sand pile, transportation of sand back to the City beach and shaping sand to final grade	Price per CY	Estimated Total Units	TOTAL
Cubic yard	$21.95	1000	$21,950.00

ADDITIONAL INFORMATION

E-Verify

E-VERIFY IS A SERVICE OF DHS AND SSA

Company ID Number: 1594929

THE E-VERIFY MEMORANDUM OF UNDERSTANDING FOR EMPLOYERS

ARTICLE I PURPOSE AND AUTHORITY

The parties to this agreement are the Department of Homeland Security (DHS) and Dynamic Group, LLC (Employer). The purpose of this agreement is to set forth terms and conditions which the Employer will follow while participating in E-Verify.

E-Verify is a program that electronically confirms an employee's eligibility to work in the United States after completion of Form I-9, Employment Eligibility Verification (Form I-9). This Memorandum of Understanding (MOU) explains certain features of the E-Verify program and describes specific responsibilities of the Employer, the Social Security Administration (SSA), and DHS.

Authority for the E-Verify program is found in Title IV, Subtitle A, of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), Pub. L. 104-208, 110 Stat. 3009, as amended (8 U.S.C. § 1324a note). The Federal Acquisition Regulation (FAR) Subpart 22.18, "Employment Eligibility Verification" and Executive Order 12989, as amended, provide authority for Federal contractors and subcontractors (Federal contractor) to use E-Verify to verify the employment eligibility of certain employees working on Federal contracts.

ARTICLE II RESPONSIBILITIES

A. RESPONSIBILITIES OF THE EMPLOYER

1. The Employer agrees to display the following notices supplied by DHS in a prominent place that is clearly visible to prospective employees and all employees who are to be verified through the system:

   a. Notice of E-Verify Participation

   b. Notice of Right to Work

2. The Employer agrees to provide to the SSA and DHS the names, titles, addresses, and telephone numbers of the Employer representatives to be contacted about E-Verify. The Employer also agrees to keep such information current by providing updated information to SSA and DHS whenever the representatives' contact information changes.

3. The Employer agrees to grant E-Verify access only to current employees who need E-Verify access. Employers must promptly terminate an employee's E-Verify access if the employer is separated from the company or no longer needs access to E-Verify.

Company ID Number: 1594929

4. The Employer agrees to become familiar with and comply with the most recent version of the E-Verify User Manual.

5. The Employer agrees that any Employer Representative who will create E-Verify cases will complete the E-Verify Tutorial before that individual creates any cases.

a. The Employer agrees that all Employer representatives will take the refresher tutorials when prompted by E-Verify in order to continue using E-Verify. Failure to complete a refresher tutorial will prevent the Employer Representative from continued use of E-Verify.

6. The Employer agrees to comply with current Form I-9 procedures, with two exceptions:

a. If an employee presents a "List B" identity document, the Employer agrees to only accept "List B" documents that contain a photo. (List B documents identified in 8 C.F.R. § 274a.2(b)(1)(B)) can be presented during the Form I-9 process to establish identity.) If an employee objects to the photo requirement for religious reasons, the Employer should contact E-Verify at 888-464-4218.

b. If an employee presents a DHS Form I-551 (Permanent Resident Card), Form I-766 (Employment Authorization Document), or U.S. Passport or Passport Card to complete Form I-9, the Employer agrees to make a photocopy of the document and to retain the photocopy with the employee's Form I-9. The Employer will use the photocopy to verify the photo and to assist DHS with its review of photo mismatches that employees contest. DHS may in the future designate other documents that activate the photo screening tool.

Note: Subject only to the exceptions noted previously in this paragraph, employees still retain the right to present any List A, or List B and List C, document(s) to complete the Form I-9.

7. The Employer agrees to record the case verification number on the employee's Form I-9 or to print the screen containing the case verification number and attach it to the employee's Form I-9.

8. The Employer agrees that, although it participates in E-Verify, the Employer has a responsibility to complete, retain, and make available for inspection Forms I-9 that relate to its employees, or from other requirements of applicable regulations or laws, including the obligation to comply with the anti-discrimination requirements of section 274B of the INA with respect to Form I-9 procedures.

a. The following modified requirements are the only exceptions to an Employer's obligation to not employ unauthorized workers and comply with the anti-discrimination provision of the INA: (1) List B identity documents must have photos, as described in paragraph 6 above; (2) When an Employer confirms the identity and employment eligibility of newly hired employee using E-Verify procedures, the Employer establishes a rebuttable presumption that it has not violated section 274A(a)(1)(A) of the Immigration and Nationality Act (INA) with respect to the hiring of that employee; (3) If the Employer receives a final nonconfirmation for an employee, but continues to employ that person, the Employer must notify DHS and the Employer is subject to a civil money penalty between $550 and $1,100 for each failure to notify DHS of continued employment following a final nonconfirmation; (4) If the Employer continues to employ an employee after receiving a final nonconfirmation, then the Employer is subject to a rebuttable presumption that it has knowingly

Company ID Number: 1594929

employed an unauthorized alien in violation of section 274A(a)(1)(A); and (5) no E-Verify participant is civilly or criminally liable under any law for any action taken in good faith based on information provided through the E-Verify.

b. DHS reserves the right to conduct Form I-9 compliance inspections, as well as any other enforcement or compliance activity authorized by law, including site visits, to ensure proper use of E-Verify.

9. The Employer is strictly prohibited from creating an E-Verify case before the employee has been hired, meaning that a firm offer of employment was extended and accepted and Form I-9 was completed. The Employer agrees to create an E-Verify case for new employees within three Employer business days after each employee has been hired (after both Sections 1 and 2 of Form I-9 have been completed), and to complete as many steps of the E-Verify process as are necessary according to the E-Verify User Manual. If E-Verify is temporarily unavailable, the three-day time period will be extended until it is again operational in order to accommodate the Employer's attempting, in good faith, to make inquiries during the period of unavailability.

10. The Employer agrees not to use E-Verify for pre-employment screening of job applicants, in support of any unlawful employment practice, or for any other use that this MOU or the E-Verify User Manual does not authorize.

11. The Employer must use E-Verify for all new employees. The Employer will not verify selectively and will not verify employees hired before the effective date of this MOU. Employers who are Federal contractors may qualify for exceptions to this requirement as described in Article II.B of this MOU.

12. The Employer agrees to follow appropriate procedures (see Article III below) regarding tentative nonconfirmations. The Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify case. The Employer agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer agrees to provide written referral instructions to employees and instruct affected employees to bring the English copy of the letter to the SSA. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending. Further, when employees contest a tentative nonconfirmation based upon a photo mismatch, the Employer must take additional steps
(see Article III.B. below) to contact DHS with information necessary to resolve the challenge.

13. The Employer agrees not to take any adverse action against an employee based upon the employee's perceived employment eligibility status while SSA or DHS is processing the verification request unless the Employer obtains knowledge (as defined in 8 C.F.R. § 274a.1(l)) that the employee is not work authorized. The Employer understands that an initial inability of the SSA or DHS automated verification system to verify work authorization, a tentative nonconfirmation, a case in continuance
(indicating the need for additional time for the government to resolve a case), or the finding of a photo mismatch, does not establish, and should not be interpreted as, evidence that the employee is not work authorized. In any of such cases, the employee must be provided a full and fair opportunity to contest the finding, and if he or she does so, the employee may not be terminated or suffer any adverse employment consequences based upon the employee's perceived employment eligibility status

Company ID Number: 1594929

(including denying, reducing, or extending work hours, delaying or preventing training, requiring an employee to work in poorer conditions, withholding pay, refusing to assign the employee to a Federal contract or other assignment, or otherwise assuming that he or she is unauthorized to work) until and unless secondary verification by SSA or DHS has been completed and a final nonconfirmation has been issued. If the employee does not choose to contest a tentative nonconfirmation or a photo mismatch or if a secondary verification is completed and a final nonconfirmation is issued, then the Employer can find the employee is not work authorized and terminate the employee's employment. Employers or employees with questions about a final nonconfirmation may call E-Verify at 1-888-464-4218 (customer service) or 1-888-897-7781 (worker hotline).

14. The Employer agrees to comply with Title VII of the Civil Rights Act of 1964 and section 274B of the INA as applicable by not discriminating unlawfully against any individual in hiring, firing, employment eligibility verification, or recruitment or referral practices because of his or her national origin or citizenship status, or by committing discriminatory documentary practices. The Employer understands that such illegal practices can include selective verification or use of E-Verify except as provided in part D below, or discharging or refusing to hire employees because they appear or sound "foreign" or have received tentative nonconfirmations. The Employer further understands that any violation of the immigration-related unfair employment practices provisions in section 274B of the INA could subject the Employer to civil penalties, back pay awards, and other sanctions, and violations of Title VII could subject the Employer to back pay awards, compensatory and punitive damages. Violations of either section 274B of the INA or Title VII may also lead to the termination of its participation in E-Verify. If the Employer has any questions relating to the anti-discrimination provision, it should contact OSC at 1-800-255-8155 or 1-800-237-2515 (TDD).

15. The Employer agrees that it will use the information it receives from E-Verify only to confirm the employment eligibility of employees as authorized by this MOU. The Employer agrees that it will safeguard this information, and means of access to it (such as PINS and passwords), to ensure that it is not used for any other purpose and as necessary to protect its confidentiality, including ensuring that it is not disseminated to any person other than employees of the Employer who are authorized to perform the Employer's responsibilities under this MOU, except for such dissemination as may be authorized in advance by SSA or DHS for legitimate purposes.

16. The Employer agrees to notify DHS immediately in the event of a breach of personal information. Breaches are defined as loss of control or unauthorized access to E-Verify personal data. All suspected or confirmed breaches should be reported by calling 1-888-464-4218 or via email at E-Verify@uscis.dhs.gov. Please use "Privacy Incident – Password" in the subject line of your email when sending a breach report to E-Verify.

17. The Employer acknowledges that the information it receives from SSA is governed by the Privacy Act (5 U.S.C. § 552a(i)(1) and (3)) and the Social Security Act (42 U.S.C. 1306(a)). Any person who obtains this information under false pretenses or uses it for any purpose other than as provided for in this MOU may be subject to criminal penalties.

18. The Employer agrees to cooperate with DHS and SSA in their compliance monitoring and evaluation of E-Verify, which includes permitting DHS, SSA, their contractors and other agents, upon

Company ID Number: 1594929

reasonable notice, to review Forms I-9 and other employment records and to interview it and its employees regarding the Employer's use of E-Verify, and to respond in a prompt and accurate manner to DHS requests for information relating to their participation in E-Verify.

19. The Employer shall not make any false or unauthorized claims or references about its participation in E-Verify on its website, in advertising materials, or other media. The Employer shall not describe its services as federally-approved, federally-certified, or federally-recognized, or use language with a similar intent on its website or other materials provided to the public. Entering into this MOU does not mean that E-Verify endorses or authorizes your E-Verify services and any claim to that effect is false.

20. The Employer shall not state in its website or other public documents that any language used therein has been provided or approved by DHS, USCIS or the Verification Division, without first obtaining the prior written consent of DHS.

21. The Employer agrees that E-Verify trademarks and logos may be used only under license by DHS/USCIS (see M-795 (Web)) and, other than pursuant to the specific terms of such license, may not be used in any manner that might imply that the Employer's services, products, websites, or publications are sponsored by, endorsed by, licensed by, or affiliated with DHS, USCIS, or E-Verify.

22. The Employer understands that if it uses E-Verify procedures for any purpose other than as authorized by this MOU, the Employer may be subject to appropriate legal action and termination of its participation in E-Verify according to this MOU.

B. RESPONSIBILITIES OF FEDERAL CONTRACTORS

1. If the Employer is a Federal contractor with the FAR E-Verify clause subject to the employment verification terms in Subpart 22.18 of the FAR, it will become familiar with and comply with the most current version of the E-Verify User Manual for Federal Contractors as well as the E-Verify Supplemental Guide for Federal Contractors.

2. In addition to the responsibilities of every employer outlined in this MOU, the Employer understands that if it is a Federal contractor subject to the employment verification terms in Subpart 22.18 of the FAR it must verify the employment eligibility of any "employee assigned to the contract" (as defined in FAR 22.1801). Once an employee has been verified through E-Verify by the Employer, the Employer may not create a second case for the employee through E-Verify.

a. An Employer that is not enrolled in E-Verify as a Federal contractor at the time of a contract award must enroll as a Federal contractor in the E-Verify program within 30 calendar days of contract award and, within 90 days of enrollment, begin to verify employment eligibility of new hires using E-Verify. The Employer must verify those employees who are working in the United States, whether or not they are assigned to the contract. Once the Employer begins verifying new hires, such verification of new hires must be initiated within three business days after the hire date. Once enrolled in E-Verify as a Federal contractor, the Employer must begin verification of employees assigned to the contract within 90 calendar days after the date of enrollment or within 30 days of an employee's assignment to the contract, whichever date is later.

Company ID Number: 1594929

b. Employers enrolled in E-Verify as a Federal contractor for 90 days or more at the time of a contract award must use E-Verify to begin verification of employment eligibility for new hires of the Employer who are working in the United States, whether or not assigned to the contract, within three business days after the date of hire. If the Employer is enrolled in E-Verify as a Federal contractor for 90 calendar days or less at the time of contract award, the Employer must, within 90 days of enrollment, begin to use E-Verify to initiate verification of new hires of the contractor who are working in the United States, whether or not assigned to the contract. Such verification of new hires must be initiated within three business days after the date of hire. An Employer enrolled as a Federal contractor in E-Verify must begin verification of each employee assigned to the contract within 90 calendar days after date of contract award or within 30 days after assignment to the contract, whichever is later.

c. Federal contractors that are institutions of higher education (as defined at 20 U.S.C. 1001(a)), state or local governments, governments of Federally recognized Indian tribes, or sureties performing under a takeover agreement entered into with a Federal agency under a performance bond may choose to only verify new and existing employees assigned to the Federal contract. Such Federal contractors may, however, elect to verify all new hires, and/or all existing employees hired after November 6, 1986. Employers in this category must begin verification of employees assigned to the contract within 90 calendar days after the date of enrollment or within 30 days of an employee's assignment to the contract, whichever date is later.

d. Upon enrollment, Employers who are Federal contractors may elect to verify employment eligibility of all existing employees working in the United States who were hired after November 6, 1986, instead of verifying only those employees assigned to a covered Federal contract. After enrollment, Employers must elect to verify existing staff following DHS procedures and begin

E-Verify verification of all existing employees within 180 days after the election.

e. The Employer may use a previously completed Form I-9 as the basis for creating an E-Verify case for an employee assigned to a contract as long as:

i. That Form I-9 is complete (including the SSN) and complies with Article II.A.6,

ii. The employee's work authorization has not expired, and

iii. The Employer has reviewed the Form I-9 information either in person or in communications with the employee to ensure that the employee's Section 1, Form I-9 attestation has not changed (including, but not limited to, a lawful permanent resident alien having become a naturalized U.S. citizen).

f. The Employer shall complete a new Form I-9 consistent with Article II.A.6 or update the previous Form I-9 to provide the necessary information if:

i. The Employer cannot determine that Form I-9 complies with Article II.A.6,

ii. The employee's basis for work authorization as attested in Section 1 has expired or changed, or

iii. The Form I-9 contains no SSN or is otherwise incomplete.

Note: If Section 1 of Form I-9 is otherwise valid and up-to-date and the form otherwise complies with

Company ID Number: 1594929

Article II.C.5, but reflects documentation (such as a U.S. passport or Form I-551) that expired after completing Form I-9, the Employer shall not require the production of additional documentation, or use the photo screening tool described in Article II.A.5, subject to any additional or superseding instructions that may be provided on this subject in the E-Verify User Manual.

g. The Employer agrees not to require a second verification using E-Verify of any assigned employee who has previously been verified as a newly hired employee under this MOU or to authorize verification of any existing employee by any Employer that is not a Federal contractor based on this Article.

3. The Employer understands that if it is a Federal contractor, its compliance with this MOU is a performance requirement under the terms of the Federal contract or subcontract, and the Employer consents to the release of information relating to compliance with its verification responsibilities under this MOU to contracting officers or other officials authorized to review the Employer's compliance with Federal contracting requirements.

C. RESPONSIBILITIES OF SSA

1. SSA agrees to allow DHS to compare data provided by the Employer against SSA's database. SSA sends DHS confirmation that the data sent either matches or does not match the information in SSA's database.

2. SSA agrees to safeguard the information the Employer provides through E-Verify procedures. SSA also agrees to limit access to such information, as is appropriate by law, to individuals responsible for the verification of Social Security numbers or responsible for evaluation of E-Verify or such other persons or entities who may be authorized by SSA as governed by the Privacy Act (5 U.S.C. § 552a), the Social Security Act (42 U.S.C. 1306(a)), and SSA regulations (20 CFR Part 401).

3. SSA agrees to provide case results from its database within three Federal Government work days of the initial inquiry. E-Verify provides the information to the Employer.

4. SSA agrees to update SSA records as necessary if the employee who contests the SSA tentative nonconfirmation visits an SSA field office and provides the required evidence. If the employee visits an SSA field office within the eight Federal Government work days from the date of referral to SSA, SSA agrees to update SSA records, if appropriate, within the eight-day period unless SSA determines that more than eight days may be necessary. In such cases, SSA will provide additional instructions to the employee. If the employee does not visit SSA in the time allowed, E-Verify may provide a final nonconfirmation to the employer.

Note: If an Employer experiences technical problems, or has a policy question, the employer should contact E-Verify at 1-888-464-4218.

D. RESPONSIBILITIES OF DHS

1. DHS agrees to provide the Employer with selected data from DHS databases to enable the Employer to conduct, to the extent authorized by this MOU:

a. Automated verification checks on alien employees by electronic means, and

b. Photo verification checks (when available) on employees.

2. DHS agrees to assist the Employer with operational problems associated with the Employer's participation in E-Verify. DHS agrees to provide the Employer names, titles, addresses, and telephone numbers of DHS representatives to be contacted during the E-Verify process.

3. DHS agrees to provide to the Employer with access to E-Verify training materials as well as an E-Verify User Manual that contain instructions on E-Verify policies, procedures, and requirements for both SSA and DHS, including restrictions on the use of E-Verify.

4. DHS agrees to train Employers on all important changes made to E-Verify through the use of mandatory refresher tutorials and updates to the E-Verify User Manual. Even without changes to E-Verify, DHS reserves the right to require employers to take mandatory refresher tutorials.

5. DHS agrees to provide to the Employer a notice, which indicates the Employer's participation in E-Verify. DHS also agrees to provide to the Employer anti-discrimination notices issued by the Office of Special Counsel for Immigration-Related Unfair Employment Practices (OSC), Civil Rights Division, U.S. Department of Justice.

6. DHS agrees to issue each of the Employer's E-Verify users a unique user identification number and password that permits them to log in to E-Verify.

7. DHS agrees to safeguard the information the Employer provides, and to limit access to such information to individuals responsible for the verification process, for evaluation of E-Verify, or to such other persons or entities as may be authorized by applicable law. Information will be used only to verify the accuracy of Social Security numbers and employment eligibility, to enforce the INA and Federal criminal laws, and to administer Federal contracting requirements.

8. DHS agrees to provide a means of automated verification that provides (in conjunction with SSA verification procedures) confirmation or tentative nonconfirmation of employees' employment eligibility within three Federal Government work days of the initial inquiry.

9. DHS agrees to provide a means of secondary verification (including updating DHS records) for employees who contest DHS tentative nonconfirmations and photo mismatch tentative nonconfirmations. This provides final confirmation or nonconfirmation of the employees' employment eligibility within 10 Federal Government work days of the date of referral to DHS, unless DHS determines that more than 10 days may be necessary. In such cases, DHS will provide additional verification instructions.

ARTICLE III
REFERRAL OF INDIVIDUALS TO SSA AND DHS

A. REFERRAL TO SSA

1. If the Employer receives a tentative nonconfirmation issued by SSA, the Employer must print the notice as directed by E-Verify. The Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify case.

Company ID Number: 1594929

The Employer also agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer agrees to provide written referral instructions to employees and instruct affected employees to bring the English copy of the letter to the SSA. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending.

2. The Employer agrees to obtain the employee's response about whether he or she will contest the tentative nonconfirmation as soon as possible after the Employer receives the tentative nonconfirmation. Only the employee may determine whether he or she will contest the tentative nonconfirmation.

3. After a tentative nonconfirmation, the Employer will refer employees to SSA field offices only as directed by E-Verify. The Employer must record the case verification number, review the employee information submitted to E-Verify to identify any errors, and find out whether the employee contests the tentative nonconfirmation. The Employer will transmit the Social Security number, or any other corrected employee information that SSA requests, to SSA for verification again if this review indicates a need to do so.

4. The Employer will instruct the employee to visit an SSA office within eight Federal Government work days. SSA will electronically transmit the result of the referral to the Employer within 10 Federal Government work days of the referral unless it determines that more than 10 days is necessary.

5. While waiting for case results, the Employer agrees to check the E-Verify system regularly for case updates.

6. The Employer agrees not to ask the employee to obtain a printout from the Social Security Administration number database (the Numident) or other written verification of the SSN from the SSA.

B. REFERRAL TO DHS

1. If the Employer receives a tentative nonconfirmation issued by DHS, the Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify case. The Employer also agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending.

2. The Employer agrees to obtain the employee's response about whether he or she will contest the tentative nonconfirmation as soon as possible after the Employer receives the tentative nonconfirmation. Only the employee may determine whether he or she will contest the tentative nonconfirmation.

3. The Employer agrees to refer individuals to DHS only when the employee chooses to contest a tentative nonconfirmation.

4. If the employee contests a tentative nonconfirmation issued by DHS, the Employer will instruct the

Company ID Number: 1594929

employee to contact DHS through its toll-free hotline (as found on the referral letter) within eight Federal Government work days.

5. If the Employer finds a photo mismatch, the Employer must provide the photo mismatch tentative nonconfirmation notice and follow the instructions outlined in paragraph 1 of this section for tentative nonconfirmations, generally.

6. The Employer agrees that if an employee contests a tentative nonconfirmation based upon a photo mismatch, the Employer will send a copy of the employee's Form I-551, Form I-766, U.S. Passport, or passport card to DHS for review by:

   a. Scanning and uploading the document, or

   b. Sending a photocopy of the document by express mail (furnished and paid for by the employer).

7. The Employer understands that if it cannot determine whether there is a photo match/mismatch, the Employer must forward the employee's documentation to DHS as described in the preceding paragraph. The Employer agrees to resolve the case as specified by the DHS representative who will determine the photo match or mismatch.

8. DHS will electronically transmit the result of the referral to the Employer within 10 Federal Government work days of the referral unless it determines that more than 10 days is necessary.

9. While waiting for case results, the Employer agrees to check the E-Verify system regularly for case updates.

ARTICLE IV
SERVICE PROVISIONS

A. NO SERVICE FEES

1. SSA and DHS will not charge the Employer for verification services performed under this MOU. The Employer is responsible for providing equipment needed to make inquiries. To access E-Verify, an Employer will need a personal computer with Internet access.

ARTICLE V
MODIFICATION AND TERMINATION

A. MODIFICATION

1. This MOU is effective upon the signature of all parties and shall continue in effect for as long as the SSA and DHS operates the E-Verify program unless modified in writing by the mutual consent of all parties.

2. Any and all E-Verify system enhancements by DHS or SSA, including but not limited to E-Verify checking against additional data sources and instituting new verification policies or procedures, will be covered under this MOU and will not cause the need for a supplemental MOU that outlines these changes.

Company ID Number: 1594929

B. TERMINATION

1. The Employer may terminate this MOU and its participation in E-Verify at any time upon 30 days prior written notice to the other parties.

2. Notwithstanding Article V, part A of this MOU, DHS may terminate this MOU, and thereby the Employer's participation in E-Verify, with or without notice at any time if deemed necessary because of the requirements of law or policy, or upon a determination by SSA or DHS that there has been a breach of system integrity or security by the Employer, or a failure on the part of the Employer to comply with established E-Verify procedures and/or legal requirements. The Employer understands that if it is a Federal contractor, termination of this MOU by any party for any reason may negatively affect the performance of its contractual responsibilities. Similarly, the Employer understands that if it is in a state where E-Verify is mandatory, termination of this by any party MOU may negatively affect the Employer's business.

3. An Employer that is a Federal contractor may terminate this MOU when the Federal contract that requires its participation in E-Verify is terminated or completed. In such cases, the Federal contractor must provide written notice to DHS. If an Employer that is a Federal contractor fails to provide such notice, then that Employer will remain an E-Verify participant, will remain bound by the terms of this MOU that apply to non-Federal contractor participants, and will be required to use the E-Verify procedures to verify the employment eligibility of all newly hired employees.

4. The Employer agrees that E-Verify is not liable for any losses, financial or otherwise, if the Employer is terminated from E-Verify.

ARTICLE VI
PARTIES

A. Some or all SSA and DHS responsibilities under this MOU may be performed by contractor(s), and SSA and DHS may adjust verification responsibilities between each other as necessary. By separate agreement with DHS, SSA has agreed to perform its responsibilities as described in this MOU.

B. Nothing in this MOU is intended, or should be construed, to create any right or benefit, substantive or procedural, enforceable at law by any third party against the United States, its agencies, officers, or employees, or against the Employer, its agents, officers, or employees.

C. The Employer may not assign, directly or indirectly, whether by operation of law, change of control or merger, all or any part of its rights or obligations under this MOU without the prior written consent of DHS, which consent shall not be unreasonably withheld or delayed. Any attempt to sublicense, assign, or transfer any of the rights, duties, or obligations herein is void.

D. Each party shall be solely responsible for defending any claim or action against it arising out of or related to E-Verify or this MOU, whether civil or criminal, and for any liability wherefrom, including (but not limited to) any dispute between the Employer and any other person or entity regarding the applicability of Section 403(d) of IIRIRA to any action taken or allegedly taken by the Employer.

Company ID Number: 1594929

E. The Employer understands that its participation in E-Verify is not confidential information and may be disclosed as authorized or required by law and DHS or SSA policy, including but not limited to, Congressional oversight, E-Verify publicity and media inquiries, determinations of compliance with Federal contractual requirements, and responses to inquiries under the Freedom of Information Act (FOIA).

F. The individuals whose signatures appear below represent that they are authorized to enter into this MOU on behalf of the Employer and DHS respectively. The Employer understands that any inaccurate statement, representation, data or other information provided to DHS may subject the Employer, its subcontractors, its employees, or its representatives to: (1) prosecution for false statements pursuant to 18 U.S.C. 1001 and/or; (2) immediate termination of its MOU and/or; (3) possible debarment or suspension.

G. The foregoing constitutes the full agreement on this subject between DHS and the Employer.

To be accepted as an E-Verify participant, you should only sign the Employer's Section of the signature page. If you have any questions, contact E-Verify at 1-888-464-4218.

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, Dynamic Group, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).
This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. 25-05-PW

   for Three Year Pre-Positioned Contract For Disaster Debris Removal Management Services

2. This sworn statement is submitted by Dynamic Group, LLC
   [name of entity submitting sworn statement]

   whose business address is 3045 Westfork Drive, Baton Rouge LA 70816
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 81-4888852

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is Joshua P. McCoy Owner / CEO and my relationship to
   [please print name of individual signing]

   the entity named above is Dynamic Group, LLC.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

✓ Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

___ There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

_The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

LETTER OF INTEREST

4/22/2025

City of Destin – City Hall
Attn: City Clerk cityclerk@cityofdestin.com
4200 Indian Bayou Trail,
Destin, FL 32541

RE: RFP Number: 25-05-PW
RFP Name: Disaster Debris Management Services

Dear City Clerk,

Grubbs Emergency Services, LLC is pleased to submit its bid in response to the City of Destin for RFP#25-05-PW –Disaster Debris Management Services. As required by the Bid specifications section, we submit to the City of Destin that the bid's terms and conditions are understood and acknowledged by the undersigned, Mr. John G. Grubbs. Included in our submittal is **One (1) original with signature, and One (1) complete and identical electronic copy (SINGLE PDF DOCUMENT) on flash drive**. Grubbs also acknowledges that the submittal contents are true and accurate and that the requirements of this RFP can be met, including but not limited to, insurance, bonding, and licensing requirements.

Our understanding of the services required for this bid includes, but are not limited to post-storm cleanup, demolition, removal of leaners and hangers, reduction, and disposal of debris all resulting from a disaster. In addition, technical program management, coordination with local, state, and federal agencies includes interaction and problem resolution with FEMA officials and any associated training/tabletop exercises, as directed by the City of Destin.

At Grubbs, we understand the need to get the local economy in recovery mode as soon as possible. Our key personnel have a combined experience of over 100 years addressing emergency response and recovery efforts. We have mobilized in response to over 200 "Notice to Proceed" activations. The Grubbs team has the expertise to work with the FEMA Public Assistance program. We can facilitate Eligible Damages Identification, Scope of Work documentation, and Status Report preparation as needed to ensure maximum reimbursement. We will seamlessly begin mobilization within 6 hours of the storm passing. Within 24 hours, we will present an event-specific detailed operations plan. The same resources will remain on the job until the mission is complete, including the restoration of all processing sites. Our goal is to help the citizens of the City of Destin return to their normal lives, as quickly as possible.

At Grubbs, we maintain the necessary working capital on hand and additional credit lines to support any financial needs to assist our customer's recovery process. Our bonding capabilities substantiate all our obligations to our clients.

Our team at Grubbs looks forward to partnering with the City of Destin. If there are any questions regarding this proposal, please do not hesitate to contact me. I thank you in advance for your consideration of our submittal.

Sincerely,

John G. Grubbs
Managing Member Grubbs Emergency Services, LLC

EXPERIENCE

&

ABILITY

3.1 Statement of Qualifications

Experience

Grubbs Emergency Services, LLC (GES), has extensive experience spanning over many years providing post-storm support to communities affected by hurricanes, tornadoes, floods, wildfires, ice storms, train derailments, and downed aircraft.

Our staff has responded to over 150 disaster-related events. Core competencies include emergency debris clearance and removal, temporary debris staging and reduction site management, and tree, limb, and stump removal. Other services encompass the removal of construction and demolition debris, boats, houses, and derelict vessels, as well as the removal of hazardous materials from inland waterways. GES also assists in cleanups associated with tornadoes, ice storms, and red tide. In recent years, the team has completed extensive coastal recovery work, specifically sand screening and beach restoration along the Florida and North Carolina coastlines. As industry leaders in disaster recovery, we are experts at solving complex debris removal and disposal problems.

During the 2004 and 2005 storm seasons, the Grubbs team managed numerous, often simultaneous, requests for assistance. In 2004 alone, 43 clients activated pre-event contracts within weeks of each other. In the 2005 hurricane season, 21 clients activated "Notice to Proceed" agreements on 34 separate occasions. Our involvement in and reimbursement success with public disaster relief programs include the FEMA Public Assistance initiative.

As demonstrated below, our client base includes communities, counties, and DOT districts in Arkansas, Florida, Georgia, Louisiana, Missouri, North Carolina, Oklahoma, South Carolina, Texas, and Virginia.

The following projects are a representative sample of our work and project scopes. Detailed information on all supported projects is available upon request. These projects effectively illustrate the breadth of disaster recovery and debris management projects supported by GES.

Technical Capabilities

1. GES pre-event planning efforts include annual face-to-face meetings with our clients to review the community's emergency management plans, conduct tabletop exercises, and provide/renew staff training as needed. Our training includes the National Incident Management System (NIMS) and Continuity of Operations Planning (COOP).

2. Each year our client emergency contact information is updated, debris staging zones are identified and mapped, etc.

3. Our project managers review the community's Debris Management plan or assist with developing one as needed to ensure the Client is positioned to receive the full benefit of FEMA's Public Assistance reimbursement program.

4. GES has implemented a Disaster Response Action Plan (DRAP) to ensure a coordinated and effective response to disasters by its personnel and various resources. The DRAP developed to support mobilization procedures is utilized by all staff and subcontractors and consists of three activation levels.

5. Grubbs' team has also developed and field-tested a Debris Management Work Plan to remove disaster-generated debris, including emergency debris clearance, removal, temporary debris staging, reduction site management, and tree stump and limb removal.

6. Grubbs Emergency Services, LLC differentiates itself from its competition through its:

- ✔ Ability to address the Client's administrative requirements adequately and consistently (e.g.) insurance requirements, expertise working with FEMA, and other federal and state disaster agencies.
- ✔ Capacity, Grubbs has processed more vegetative debris in one operation – over five million cubic yards in less than 120 days – than any other firm in the past decade.
- ✔ Simultaneous coordination of debris management efforts in multiple political districts.
- ✔ Project managers are outfitted with hi-tech equipment, including wireless internet connections to laptops, printers, GPS units, digital cameras, and redundant communication equipment.
- ✔ Project managers develop and refine detailed work schedules to respond to each event's needs and monitor the entire operation to ensure clients' expectations are met.
- ✔ Prequalification of all subcontractors to ensure that insurance requirements and equipment requirements are met.
- ✔ The comprehensive nationwide complement of subcontractors who ensure resources will be available to the County promptly.

Equipment

While Grubbs Emergency Services, LLC owns a significant amount of equipment, rental agreements are in place with Sunbelt and other equipment rental companies across the United States to supplement existing reserves as needed. Enclosed is a copy of the equipment typically used for debris cleanup efforts, as well as an example of our rental agreement.

References

GES currently has approximately 15 active contracts with 2–5-year agreements for debris management and disaster recovery services

3.2 SCOPE OF WORK

Grubbs Emergency Services, LLC (GES) provides comprehensive disaster recovery and restoration services, offering clients a "one-stop shop" for all their post-disaster needs. Our expertise encompasses a wide range of services, including:

1. Pre-Disaster Planning and Consultation:

- **Technical Guidance:** GES provides expert consultation before, during, and after disaster events. This includes annual reviews of permit requirements, evaluation of private property agreements, staging areas, site security, traffic control protocols, client procurement policies, and Environmental, Health, and Safety (EHS) plans.
- **Training and Exercises:** We facilitate annual emergency response training and tabletop exercises, such as the National Incident Management System (NIMS) training, for designated client personnel.
- **Debris Management Plan:** GES collaborates with clients to develop pre-event, site-specific debris management plans, which can potentially increase FEMA reimbursement rates by 5%.

2. On-Site Management and Administrative Support:

- **Personnel and Resources:** GES provides on-site management staff, field supervisors, equipment operators, drivers, laborers, and all necessary vehicles, equipment, and resources to ensure a successful recovery operation.
- **Documentation and Reporting:** We maintain detailed records of vehicle load capacity, equipment certifications, and utilize standardized placards and load tickets for accurate tracking and reporting.
- **Project Management:** GES oversees all aspects of project management, including coordination of recovery activities, data management, daily progress reports, and community relations, ensuring compliance with FEMA requirements for full reimbursement.

3. Debris Removal and Site Cleanup:

- **Emergency Road Clearance:** GES performs emergency debris road clearance, including tree, limb, and stump removal from public streets, roads, and rights-of-way.
- **Debris Removal:** We remove various types of debris, including white goods, construction and demolition debris, unsafe structures, dead animal carcasses, and mixed debris.
- **Specialized Removal:** GES provides services for motor vehicle, boat, house, and derelict vessel recovery, as well as hazardous materials removal from inland waterways.
- **TDSRS Management:** We manage Temporary Debris Storage and Reduction Sites (TDSRS) in compliance with all environmental, health, and safety standards.

4. Environmental Restoration:

- **Coastal Environment Cleanup:** GES specializes in coastal environment cleanups, including sand screening, beach restoration, canal and riverbank cleanup, berm restoration, re-grading, and re-seeding.

5. Miscellaneous Services:

- **Client-Specific Support:** GES provides miscellaneous services as defined by the client, such as bottled water delivery and temporary shelter/command center setup.

3.3 FHWA Emergency Relief Program

Key Lessons and Expertise

Recent cleanup efforts in Florida, Texas, and Kentucky have provided Grubbs Emergency Services, LLC, with invaluable insights into the intricacies of FEMA's Public Assistance program documentation requirements. These experiences have allowed us to refine our results-oriented process, significantly enhancing our ability to assist clients in identifying, submitting, and securing grant funds for disaster recovery reimbursement from agencies such as the EPA, USDA, NRCS, Department of Natural Resources, and FEMA. We have cultivated strong working relationships with FEMA staff, gaining expertise in debris eligibility determination, data requirements, project worksheet development, and load ticket audits.

A notable example of our expertise in navigating complex funding requirements is our work with the City of Margate on a canal debris cleanup and restoration project following Hurricanes Katrina and Wilma. The project encompassed the cleanup of approximately 30 miles of canals, waterways, and banks heavily impacted by trees and vegetative debris. Grubbs Emergency Services, LLC, rapidly mobilized resources within hours of the storms, mitigating the risk to public property.

To execute the large-scale restoration, we deployed lightweight barges equipped with knuckle-booms and other specialized waterborne equipment. This project presented unique challenges due to the stringent cost tracking requirements mandated by the Natural Resource Conservation Service (NRCS) and FEMA. Our first step was to educate the client on available FEMA funding options and address conflicting administrative issues arising from multiple governmental jurisdictions. Furthermore, we successfully navigated the complex process of obtaining Right of Entry clearance from nearly 80 private property owners before commencing canal bank cleanup and restoration.

As detailed in this proposal, the Grubbs Emergency Services, LLC, team is fully prepared to assist the County with any or all of the following recovery activities, as requested:

- ✔ **Strategic Recovery Planning:** Develop a comprehensive recovery strategy tailored to the County's specific needs.
- ✔ **Agency Liaison:** Facilitate applicant briefings with state and federal officials, ensuring clear communication and understanding.
- ✔ **FEMA Coordination:** Coordinate kickoff and subsequent status meetings with FEMA officials, maintaining consistent communication and progress tracking.
- ✔ **Financial Management Guidance:** Provide expert technical assistance and financial management advice to optimize resource utilization.
- ✔ **Public Assistance Process Management:** Support the ongoing management of the FEMA Public Assistance process, including the preparation of correspondence, reports, documentation of eligible damages, conducting inspections, and preparing detailed project worksheets.
- ✔ **Status Reporting Support:** Provide the client with the technical assistance and information necessary to prepare accurate and timely status reports.
- ✔ **Financial Record Management:** Categorize, record, track, and file costs on approved forms to ensure seamless financial reimbursement processes.
- ✔ **Project Worksheet Preparation:** Prepare meticulous project worksheets for both small and large projects, ensuring accurate scopes of work, precise estimates, and eligibility of expenses.
- ✔ **Claim Assistance:** Aid departments experiencing difficulties with their claims, ensuring adherence to all FEMA and state deadlines.
- ✔ **Interagency Funding Resolution:** Address and resolve issues related to interagency funding conflicts.
- ✔ **Project Closeout Management:** Prepare all necessary documentation and represent the client in all project closeout activities.
- ✔ **Audit and Inspection Preparation:** Finalize preparations for state and FEMA final inspections and audits, ensuring a smooth and compliant process.

FHWA Emergency Relief Program

Description: Title 23, United States Code, Section 125, authorizes a special program from the Highway Trust Fund to repair or reconstruct Federal-aid highways and roads on Federal lands that have sustained severe damage due to: (1) natural disasters, or (2) catastrophic failures caused by external factors. This program, commonly known as the Emergency Relief (ER) program, supplements the resources of states, their political subdivisions, and other federal agencies to help offset substantial expenses resulting from extraordinary events.

The ER program's eligibility for natural disasters is determined by the disaster's scale and severity. Damage to highways must be extensive, widespread, and result in exceptionally high costs for the highway agency. Eligibility for catastrophic failures due to external causes is based on the criteria that the failure was sudden, not caused by an inherent flaw in the facility, and resulted in a significant disruption to transportation services and unusually high expenses for the highway agency.

Funding Availability: Under 23 U.S.C. 125, the Emergency Relief (ER) program is authorized $100 million annually. Congress has, on occasion, supplemented this funding through additional appropriations. Notably, MAP-21 eliminated the $100 million per-state event cap. However, total ER obligations for U.S. Territories (American Samoa, Commonwealth of Northern Mariana Islands, Guam, and the Virgin Islands) are limited to $20 million per fiscal year.

Federal Share: Approved Emergency Relief (ER) funds are distributed at the standard federal share applicable to the Federal-aid facility. For Interstate highways, the federal share is 90 percent. For all other eligible highways, the federal share is 80 percent.

The federal share for permanent ER repairs may increase to 90 percent if the state's combined eligible ER expenses within a federal fiscal year exceed its annual apportionment under 23 U.S.C. section 104 for the fiscal year in which the disasters or failures occurred.

Emergency repair work, conducted within 180 days of the disaster, to restore essential travel, minimize further damage, or protect remaining facilities may be reimbursed at a 100 percent federal share. This 180-day period for 100 percent eligibility of emergency repairs may be extended if a state cannot access a site to evaluate damages and repair costs.

Application Process: Individual states are responsible for requesting Emergency Relief (ER) funds to assist with the necessary repair of Federal-aid highways damaged by natural disasters or catastrophic failures. The ER application process begins with the state's Department of Transportation filing a notice of intent with the FHWA Division Office. States must submit their ER funding application to the FHWA within two calendar years of the disaster date. The application must include a comprehensive list of all eligible project sites and associated repair costs.

Emergency Relief Program (E.R.)

Year	2019	2020
Authorization	$ 100 M	$ 100 M

Program purpose

The purpose of the Emergency Relief (ER) program is to provide funding for both emergency and permanent repairs on Federal-aid highways and roads on Federal lands that have sustained severe damage due to natural disasters or catastrophic failures caused by external factors, as determined by the Secretary.

Statutory citation(s): MAP-21 §§1107 and 1508; 23 USC 120(e) and 125; SAFETEA-LU §1112

Funding features

The Emergency Relief (ER) program is funded through a permanent authorization of $100 million annually in contract authority from the Transportation Trust Fund's Highway Account. These funds remain available until expended and are exempt from federal-aid highway obligation limitations. [23 USC 125]

In addition to the permanent authorization, SAFETEA-LU authorized the General Fund of the Treasury to supplement the permanent authorization when ER allocations exceed $100 million. Appropriation legislation is required to make these supplemental funds available. [SAFETEA-LU §1112]

Funds are allocated to states based on an assessment of repair costs following a disaster. Up to 5% of ER funds may be used by the Secretary for projects that protect public safety or maintain or protect roadways included within an emergency declaration.

Federal share: The federal share is determined in accordance with 23 USC 120, including a sliding scale adjustment for states with high percentages of federally owned public lands.

- Emergency repair work, conducted within 180 days of the disaster, to restore essential travel, minimize further damage, or protect remaining facilities, may be reimbursed at a 100% federal share. This period may be extended if access to damaged areas is delayed.
- For eligible permanent repairs to restore damaged facilities, the federal share may be up to 90% if the state's total eligible expenses from natural disasters or catastrophic failures in a federal fiscal year exceed its apportionments under 23 USC 104 for the fiscal year in which the event occurred.
- The federal share for repair work on federal land, federal land access, and tribal transportation facilities is 100%.

Eligible activities

E.R. program eligibility continues with the following key changes and clarifications:

- Maintenance and Transit Costs: Essential and necessary maintenance and transit service operation costs are now eligible activities to provide temporary alternatives for disrupted highway traffic service.
- Debris Removal: Debris removal is eligible under the ER program only if the event is not declared a major disaster by the President, or if it is declared a major disaster but the debris removal is ineligible for assistance under the Stafford Act.
- Comparable Facility Repairs: ER funds can be used to participate in the costs of repairing or reconstructing a comparable facility, defined as a facility that meets the current geometric and construction standards required for the types and volume of traffic it will carry over its design life.
- Construction Phase Defined: ER funds cannot be used for the repair or reconstruction of a bridge if the construction phase of a replacement structure is included in a state's approved transportation improvement program at the time of the event.

Program features

The E.R. program has undergone the following key changes:

- Application Requirements: States must submit ER funding applications within two years of the event, including a comprehensive list of all eligible project sites and associated repair costs.
- Obligation Limits: The $100 million per-state event obligation cap has been removed.
- Federal and Tribal Facilities: The program covers tribal transportation facilities, federal lands transportation facilities, and other federally owned roads.

Statement of Adherence to Program Standards

Through years of experience, Grubbs Emergency Services, LLC, has refined its debris management process to provide comprehensive support to clients throughout the recovery process. Our approach extends beyond the physical removal of debris; we recognize the significant impact a major disaster has on municipal staff.

Grubbs Emergency Services, LLC, provides clients with the necessary structure and confidence to achieve successful disaster recovery through our robust documentation process, proven management approach and techniques, experienced staff, and extensive history in federally declared disaster recovery projects.

Our approach is built on a foundation of strict adherence to all applicable regulations and guidelines. Upon receiving a notice to proceed, Grubbs Emergency Services, LLC, will provide clients with comprehensive documentation support to facilitate reimbursement under the FEMA Public Assistance Program. Our proven documentation process has successfully supported claims for numerous clients nationwide across all Public Assistance categories (A-G).

Our experienced personnel are trained in the proper implementation of our standardized forms, ensuring seamless integration of field and office operations. The Grubbs documentation and debris management process incorporates essential controls and requirements outlined in key FEMA publications, including but not limited to:

- FEMA 325 - Public Assistance Debris Management Guidebook
- Title 44 of the Code of Federal Regulations

By aligning our project management approach with the requirements of potential funding sources and addressing the specific needs and concerns of municipalities, we ensure a consistent, efficient, and successful recovery process.

Our meticulous documentation process ensures accurate tracking and accountability for all personnel, equipment, and materials. We precisely quantify storm debris, construction & demolition debris, and mulch entering or leaving processing/disposal sites and landfills.

Based on the project requirements, we utilize two primary tracking methods:

- Cubic Yard Tracking: Billing is based on the volume of cubic yards hauled to the processing site and the volume of mulch transported from the processing site to the disposal site. This method is typically used for debris removal and processing operations.
- Hourly Tracking: For other services, such as specialized equipment operation or personnel support, billing is based on an hourly rate for employees and equipment.

These comprehensive tracking methods provide the County with the highest level of documentation, management, accountability, and support for reimbursement claims, ensuring transparency and accuracy throughout the project.

3.4 NATIONAL INCIDENT MANAGEMENT SYSTEM (NIMS)

The National Incident Management System (NIMS), and the Incident Command System, (ICS), developed by the Secretary of Homeland Security, establish a uniform set of processes and procedures that all levels of emergency personnel must use to conduct emergency response operations.

All federal, state, local, tribal, private sector, and non-governmental personnel with a direct role in emergency management and response must be NIMS and ICS trained.

In order to receive preparedness funding, applicants will need to certify as part of their grant applications that they, and their vendors, have met NIMS requirements. This ongoing certification process will help to finely tune the emergency operations of this country.

Over the years, Grubbs Emergency Services, LLC has strived to remain at the forefront in the ever-evolving disaster recovery industry. Due in part to the recent legislation, Grubbs has forged an exclusive partnership with the leaders in disaster training, Disasters, Strategies and Ideas Group, LLC.

Disasters, Strategies and Ideas Group, LLC (DSIG), working in concert with Grubbs Emergency Services trained personnel, provide cutting edge training and planning tools to meet your needs. The following information details some of the training services available. We have provided resumes of DSIG, LLC trainers to highlight their qualifications. Now we want to pass the training courses along to our clients as a "Value Added Service". The following information explains the training that will be offered by Grubbs and explains the team qualifications in detail.

Disasters, Strategies and Ideas Group serves, or has served as emergency management consultants for several counties, municipalities and state agencies in Florida, including the Florida Governor's Office, the Florida Department of Health, the Florida Department of Agriculture, and Consumer Services and the Florida Court System.

Disasters, Strategies and Ideas Group believe that the training and exercise process is the foundation of the 21st-Century Emergency Management. Our team uses their past experiences and current opportunities to incorporate all aspects of emergency response into our training, exercises and plans.

TRAINING/PLANNING

PHASE ONE
Formal recognition of NIMS; adoption of NIMS principles, policies by local government resolution

PHASE TWO
NIMS implementation consists of staff training.

REQUIRED TRAINING

- IS-700 NIMS - An Introduction: All personnel with a direct role in emergency preparedness, incident management or response must complete this training.
- IS-800 NRP - An Introduction: All local emergency managers or personnel whose primary responsibility is emergency management must complete this training.
- ICS 100 Introduction to ICS - All governmental, private sector and non-governmental personnel at the entry level, first line supervisor level, middle management level, and command and general staff level of emergency management operations must complete ICS 200 level training.

- ICS 200 Basic ICS - All governmental, private sector and non-governmental personnel at the entry level, first line supervisor level, middle management level, and command and general staff level of emergency management operations must complete ICS-200 level training.

- ICS 300 Intermediate ICS - All middle management including strike team leaders, task force leaders, unit leaders, division/group supervisors, branch directors and multi-agency coordination system/emergency operations center staff.

- ICS 400 Advanced ICS - Command and General staff, select department heads with multi-agency coordination system responsibilities, area commanders, emergency managers and multi-agency coordination system/emergency operations center managers.

PUBLIC ASSISTANCE TRAINING

To provide supplemental financial assistance to state, local and tribal governments, and certain private non-profit organizations for response and recovery activities required as the result of a declared disaster. Funding is cost shared at a federal share of no less than 75% of eligible costs.

TABLETOP EXERCISE

Develop and conduct a functional tabletop exercise to test the County Emergency Response Team and integration of the EOC/ICS Interface and Field Operations that meet the current Homeland Security and the State of Florida requirements.

COOP - WEB-BASED PLAN

EMPlans.com was built to assist and guide Federal, State and Local agencies through the process of developing Continuity of Operations Plans (COOP). **EMPlans.com** walks users through each step of the COOP process and develops a plan that outlines a clear, concise understanding of roles and responsibilities needed to ensure an agency's transition during times of change in normal operation.

EMPLANS.COM CAPABILITIES

- EMPlans.com focuses on ease of use and maximum plan detail.

- EMPlans.com creates a standardized on-line planning environment that not only produces a hard-copy COOP document but also a "living plan". It guides users through each step of the planning process to ensure completion of a well-organized Continuity of Operations Plan.

- Ability to upload additional documents, pictures, floor plans and electronic files to support plan development and implementation.

- COOP information can be easily downloaded into a Microsoft Word document as a completed standardized plan, or can be separated and viewed by section.

- Comprehensive Emergency Management Plans (CEMP) to meet the NRP requirements

- SARA Title III Management System

- Debris Management Plans

DEBRIS MANAGEMENT PLAN DEVELOPMENT ASSISTANCE

Develop a Debris Management Plan to integrate the current NIMS Compliance Standards into existing plans or to develop a new Debris Management Operational Plan meeting all Homeland Security NIMS Compliance and the State of Florida requirements.

COMPREHENSIVE EMERGENCY MANAGEMENT PLAN (CEMP)

A comprehensive re-write of the CEMP to integrate NIMS compliance and lessons learned from the State of Florida.

3.5 Building Strong Partnerships for Excellence in Disaster Recovery

At Grubbs Emergency Services, LLC, we understand that successful disaster recovery hinges on strong, reliable partnerships. We are proud to highlight the exemplary relationships we have cultivated with our two primary subcontractors, Gaston Tree Debris Services, LLC and Sunderland Trucking, LLC. These partnerships are essential to the success of our operations and represent a commitment to collaboration, professionalism, and mutual respect.

Our Subcontractor Selection and Qualification Process:

Before detailing our valued partnerships, it's important to note the rigorous selection process we employ. We choose subcontractors based on proven expertise, extensive experience, equipment capabilities, safety records, and financial stability. This ensures our partners align with our commitment to delivering exceptional service in emergency situations.

Gaston Tree Debris Services, LLC: Expertise in Tree and Debris Management

Gaston Tree Debris Services, LLC has been an invaluable partner, bringing unmatched expertise and dedication to damaged tree removal, debris removal, and major grinding operations for over a decade. With a fleet of over 20 grinders, Gaston has the capacity to handle large-scale projects efficiently and effectively. Their reliability during emergency situations consistently exceeds expectations, ensuring communities can recover swiftly and safely. Their team's ability to adapt to challenging environments and deliver results has been a cornerstone of our operations, and we value their consistent quality of service. Gaston has successfully completed numerous projects with GES, including the large-scale debris removal efforts following Hurricanes Idalia, Debby, and Helene.

Sunderland Trucking, LLC: Reliable Logistics and Transportation

Sunderland Trucking, LLC has been a critical component of our logistics and transportation operations for over a decade. They boast a fleet of hundreds of hauling units, with access to even more resources when needed, allowing them to tackle even the most demanding transportation challenges. Their dedication to timeliness and safety ensures that materials, equipment, and resources are transported without delay, even in the most complex circumstances. Their professionalism and commitment to excellence contribute significantly to the smooth execution of our projects, and we deeply appreciate the strong working relationship we share. Sunderland has proven invaluable in the efficient transport of debris and equipment during Hurricanes Idalia, Debby, and Helene.

Partnership Built on Shared Values and Proven Experience

The relationships between Grubbs Emergency Services, LLC and our subcontractors are built on shared values of integrity, teamwork, and a steadfast dedication to serving our communities. These relationships span back over a dozen years, a testament to the trust, collaboration, and shared commitment to excellence that define our partnerships. By working closely together, we leverage each other's strengths to achieve operational efficiency and deliver exceptional outcomes for our clients. The success of our collaborations during numerous Hurricanes such as Michael, Idalia, Debby, and Helene demonstrates the efficacy of these long-standing partnerships.

Our Commitment to Seamless Integration and Communication:

During disaster response, effective communication and seamless integration of our teams are paramount. We establish clear communication protocols and conduct regular coordination meetings with our subcontractors to ensure alignment and efficiency. This approach allows us to respond rapidly and effectively to the evolving needs of the communities we serve.

We look forward to continuing these outstanding partnerships as we collectively strive to provide unparalleled emergency services and solutions. Our established relationships with Gaston Tree Debris Services, LLC and Sunderland Trucking, LLC, along with our rigorous subcontractor selection process, ensures that Grubbs Emergency Services is prepared to deliver exceptional results for our clients, even in the face of the most challenging disasters.

J.R. GRAY
16533 Us Hwy 19
Hudson, FL 34667
(352) 796-7127

PROFILE

As Field Supervisor, Mr. Gray's duties include overseeing and supporting all active projects' day to day operations. He is responsible for ensuring that crews and monitors are knowledgeable concerning their job responsibilities and abiding by FEMA guidelines. He conducts tailgate sessions and safety meetings with subcontractors, identifies temporary debris staging and reduction sites, and monitors operations to ensure all work efforts are completed in an orderly and timely manner.

EDUCATION/CERTIFICATIONS

National Incident Management System and Incident Command System training — August 2006

RECOVERY OPERATIONS EXPERIENCE

Mr. Gray has thirty-one years of experience working in the construction and heavy equipment operations industries. His disaster recovery project experience includes 23 separate Florida applicants ranging from Coconut Creek south to Key West during the 2005 Hurricane Season (Dennis, Katrina, Rita, and Wilma) and 43 separate Florida applicants ranging from Jacksonville south to Key West and west to Punta Gorda during the 2004 Hurricane Season (Charley, Frances, Ivan, and Jeanne).

WORK HISTORY

Grubbs Emergency Services, LLC, Field Supervisor — 2004-Present
- Manages various aspects of the daily operations of debris management projects and associated activities

Smith & Company, Vice President of Operations / Earthworks Division Manager / General Superintendent — 1987-2002
- Duties included coordination and execution of administrative and operations-related tasks for all construction projects

Bryant Contracting Corp., Foreman — 1984-1987
- Duties included supervising and operating equipment for earthwork and roads

Ryan Inc. Eastern, BSI Inc., Wimpey of Canada, and Devon International Corp., Heavy Equipment Operator — 1975-1984
- Duties included operating various heavy equipment, dozers, and backhoes for such companies

KELLY UNDERWOOD
16533 US Hwy 19
Hudson, FL 34667
(352) 796-7127
kunderwood@grubbses.com

PROFILE

Mr. Underwood is a senior manager with an extensive background in construction sales and project management. He has conducted numerous disaster relief operations with responsibility for field operations and resolving issues associated with cleanup protocols, EHS regulatory compliance, subcontractor oversight, and project scheduling. Experienced in managing projects from conception to completion, Mr. Underwood has years of project management experience working with the Florida Department of Transportation (FDOT) Districts Five and Seven.

WORK HISTORY

Grubbs Emergency Services, LLC Contracts and Safety Manager 2004-Present

Ms. Grubbs is the operations management for Grubbs Emergency Services, LLC. She has emergency response experience that includes various disasters, including tornadoes, ice storms, floods, tropical storms, and hurricanes. Ms. Hamilton ensures that all subcontractors are pre-qualified, including background checks, ensuring appropriate insurance coverage is in place. She executes subcontract agreements and proper pay rate documentation following field negations, communicating pertinent information to the data center resulting from field operations, and other subcontractor management functions. When Grubbs is in a non-response mode, Ms. Grubbs assists with proposal development and asset management of Grubbs in-house day to day operations. Also, she does safety training as an approved trainer for OSHA Construction and General Industry and MSHA and the training for all project managers. Ms. Grubbs reviews all pre-event contracts and performs the annual training for the municipalities to keep everyone up to date on the FEMA eligibility requirements' daily changes.

JOHN "GARY" GRUBBS
16533 Us Hwy 19
Hudson, FL 34667
(352) 279-9222
ggrubbs@grubbses.com

PROFILE

Mr. John G. Grubbs is a chief manager/owner and construction company owner who lead numerous disaster relief operations and heavy civil construction projects in the southeast U.S. He successfully operated and built his business to achieve annual revenues of $70-80 million dollars over the past 30 years. During this timeframe, Mr. Grubbs acquired, built, operated and/or managed asphalt plants (2), a concrete block manufacturing plant, a concrete plant and limestone rock mines (2). As the business grew, he supplied large quantities of base-rock and asphalt to companies in Hernando, Citrus and Pasco Counties. Of note, is the contract he secured to supply rock and asphalt for the Suncoast Parkway project which resulted in millions of dollars worth of revenues for his company.

In 1993, following the "No Name Storm" event which significantly impacted Hernando County, Mr. Grubbs identified a business opportunity that facilitated disaster recovery initiatives for municipal governments dealing with the aftermath of natural and man-made disasters. He created an "Emergency Services Division" and marketed the concept of pre-event emergency response contracts which are currently employed throughout the country by many communities. Additionally, Grubbs pioneered the establishment of a proprietary debris documentation system as well as debris management approaches that have become industry standards.

Under his guidance and oversight, Grubbs Emergency Services, LLC staff managed over 150 major disaster initiatives since its inception. Following the 2005 hurricane season, 21 GES clients activated their pre-event contracts on 34 separate occasions. Similar recovery efforts were supported during the 2004 hurricane season when GES worked with 43 of its clients simultaneously after Hurricanes Charley, Frances, Ivan and Jeanne, which generated over $300 million in revenues.

EDUCATION, CERTIFICATIONS

- National Incident Management System (NIMS) certified
  - 2006 IS-100 Introduction to Incident Command System
  - 2006 IS-200 Incident Command System for Single Resources Management
  - 2006 IS-700 National Incident Command System
  - 2006 IS-800 National Resource Plan
- On the job training working for John D. Grubbs Construction, a builder of commercial properties e.g. hospitals, banks, schools
- Hernando High School

RECOVERY OPERATIONS

- 2023 Hurricane Idalia: FDOT (Lafayette County, FL, Suwannee County, FL and Hamilton County, FL), Cedar Key, FL, and Yankeetown, FL.
- 2023 Hurricane Ian: Fort Myers Beach, FL,
- 2022 Hurricane Ian: Osceola County, FI, Waste Management of Florida Okeechobee and Fort Myers, FL,
- 2018 Hurricane Michael: City of Blountstown, FL
- 2017 Hurricane Irma: Hernando County, City of Cedar Key, City of Dunnellon, City of Leesburg, Osceola County, Village of Biscayne Park, City of Lauderhill, City of Margate, City of Marathon, City of

Miramar, City of Neptune Beach, Village of Virginia Gardens

- 2016 Hurricane Hermine & Matthew cleanup for Yankeetown, Hernando County, Seminole County and Neptune Beach

- 2012 Superstorm Sandy final disposal New York and New Jersey
- 2009 Ice storm cleanup in Ballard and Hart Counties for the State of Kentucky Transportation Cabinet
- 2008 Hurricane Ike cleanup in the communities of Baytown, El Lago, Galveston, Nassau Bay, Piney Point Village and Taylor Lake Village, Texas
- 2007 Tornado recovery in the Town of Lady Lake, Florida
- 2006 Red tide cleanup in the Town of Long Boat Key and other miscellaneous west coast Florida communities
- 2005 Debris cleanup and management following Hurricanes Dennis, Katrina, Rita and Wilma for applicants located in 23 Florida communities
- Hurricanes/Tropical Storms: Ike, Charley, Frances, Ivan, Jeanne, Dennis, Katrina, Rita, Wilma, Floyd, Bertha
- In 1996, Mr. Grubbs was operating in Jacksonville, NC on a project billed at the time as "the 2nd largest pipe fitting job in the world." The project included pipe fitting operations for over 1.4 million feet of pipe ranging in size from 48" to 1 ½ "and covering over 6000 acres. The project was successfully completed for the Dana Corporation.
- Nearing the pipe job completion, Hurricanes Fran and Bertha ravaged the N.C. coastline. Mr. Grubbs successfully procured the multi-million-dollar debris management project as a result of these storms as well implemented a system that is now a nationally recognized process for disaster debris documentation, critical to obtaining FEMA reimbursements.
- Tornadoes Cleanup Response: Del City, OK; DeKalb, Gwinnett, Lincolnton Counties, GA; Vienna, GA; USDA NRCS, OK; Lady Lake, FL;

Derek Anderson
16533 US Hwy 19 Hudson, FL 34667
(727) 236-0240 derek.anderson@email.com

PROFESSIONAL PROFILE

Accomplished Project Manager and Heavy Equipment Operator with over 15 years of experience in disaster recovery, large-scale debris removal, and construction projects. Derek is highly skilled at overseeing complex operations, ensuring compliance with FEMA standards and safety protocols, and driving efficiency across all project phases. Known for his leadership, problem-solving abilities, and commitment to excellence, he has consistently delivered successful outcomes in high-pressure situations. His expertise in disaster recovery makes him a vital asset to any team.

RECOVERY OPERATIONS EXPERIENCE

Derek has played an instrumental role in coordinating and executing disaster recovery projects, demonstrating his ability to manage resources and lead teams effectively:

- **2024 Hurricane Helene:** Led operations in Hamilton, Suwannee, and Lafayette counties, overseeing debris removal, site restoration, and ensuring compliance with FEMA eligibility standards.
- **2024 Hurricane Debby:** Supervised recovery efforts, optimizing workflows and ensuring timely completion in Hamilton, Suwannee, and Lafayette counties.
- **2023 Hurricane Idalia:** Coordinated large-scale recovery efforts across Hamilton, Suwannee, and Lafayette counties, mitigating environmental hazards and restoring infrastructure.
- **2018 Hurricane Michael:** Managed city-wide debris removal and recovery operations in Blountstown, FL, achieving successful project outcomes under stringent timelines.
- **2017 Hurricane Irma:** Directed operations in multiple Florida locations, including Hernando County, Cedar Key, Dunnellon, Leesburg, and eight other municipalities, ensuring efficient cleanup and compliance with safety standards.
- **2016 Hurricanes Hermine & Matthew:** Led teams in debris cleanup and site restoration efforts in Yankeetown, Hernando County, Seminole County, and Neptune Beach, maintaining operational excellence.

Through these projects, Derek has honed his ability to manage logistics, ensure safety, and deliver results even in the most challenging circumstances.

PROFESSIONAL EXPERIENCE

Grubbs Emergency Services, LLC

Project Manager / Heavy Equipment Operator | 2016 – Present

- Oversee and manage disaster recovery projects from initial planning to final execution, including debris removal, site restoration, and project closeout.
- Lead teams of operators and subcontractors, ensuring adherence to safety protocols, regulatory guidelines, and project deadlines.
- Develop operational strategies to maximize efficiency, improve safety measures, and maintain compliance with FEMA eligibility requirements.
- Coordinate resources and logistics, ensuring smooth communication between field teams and administrative personnel.

Anderson Heavy Equipment & Truck Repair, LLC

Lead Mechanic | 2005 – 2016

- Directed the maintenance and repair of heavy equipment and vehicles, ensuring operational readiness for disaster recovery and construction projects.
- Diagnosed complex mechanical issues and implemented effective solutions to extend equipment lifespans and improve performance.
- Managed a team of skilled mechanics, providing training and support to ensure high-quality repairs and service delivery.

KEY SKILLS & EXPERTISE

- Disaster Recovery Operations and Management
- Debris Removal and Environmental Restoration
- Heavy Equipment Operation and Maintenance
- FEMA Compliance and Safety Standards
- Team Leadership and Project Coordination
- Logistics Management and Resource Allocation

Jessica Anderson
16533 US Hwy 19 Hudson, FL 34667
(352) 397-9898 jessie@grubbses.com

PROFESSIONAL PROFILE

A highly motivated and versatile professional with a strong foundation in data management, IT infrastructure, and disaster recovery operations. Jessica has extensive experience in maintaining critical systems and providing essential support during high-stakes situations. Her ability to troubleshoot complex issues, ensure uptime, and deliver exceptional service has earned her recognition as a reliable and effective team member. Adept at thriving in challenging environments, she brings a proactive approach to problem-solving and a steadfast commitment to excellence.

EDUCATION & CERTIFICATIONS

- **OSHA OTI 500 – Construction Industry (2019):** Certified Trainer for 10- and 30-hour courses, specializing in workplace safety and compliance.
- **OSHA OTI 501 – General Industry (2019):** Certified Trainer for 10- and 30-hour courses, focused on safety protocols in diverse professional settings.

DISASTER RECOVERY OPERATIONS EXPERIENCE

Jessica has made significant contributions to disaster recovery efforts, ensuring data integrity and maintaining system availability during critical projects:

- **Hurricane Helene:** Collaborated with teams to restore IT infrastructure and ensure smooth operations during recovery efforts in Hamilton County, Florida.
- **Tropical Storm Debby:** Provided essential data center support during restoration efforts in Suwannee County, Florida, successfully minimizing disruptions.
- **Hurricane Idalia:** Played a key role in the recovery process by ensuring seamless data management and IT infrastructure repairs in Lafayette County, Florida.

Her ability to maintain composure, troubleshoot effectively, and adapt to dynamic situations has been instrumental in supporting recovery teams and restoring normalcy.

PROFESSIONAL EXPERIENCE

Grubbs Emergency Services, LLC

Data Center Assistant | 2019 – Present

- Maintain and oversee the functionality of critical data systems, ensuring operational continuity during disaster recovery operations.
- Troubleshoot technical issues under pressure, providing rapid and effective solutions to support recovery teams.

- Collaborate with field operators to ensure data integrity and seamless communication between teams during emergency situations.
- Develop and implement best practices for data management, driving efficiency and reliability within the organization.

Sequoia Brands

Brand Manager | 2016 – 2019

- Led creative marketing campaigns, resulting in increased brand engagement and customer loyalty.
- Managed cross-functional teams to execute strategic initiatives, achieving measurable growth in brand visibility.
- Oversaw budget allocation and project timelines, ensuring the successful completion of campaigns while maximizing ROI.

WGHR FM Greatest Hits Radio

Account Executive | 2012 – 2016

- Developed innovative advertising solutions tailored to client needs, resulting in long-term partnerships and increased revenue.
- Exceeded sales targets consistently through strategic planning, persuasive communication, and a client-focused approach.
- Collaborated with creative teams to design impactful advertisements, enhancing client satisfaction and brand recognition.

KEY SKILLS & EXPERTISE

- Disaster Recovery and Crisis Management
- Critical IT Infrastructure Maintenance
- Data Integrity and Security Management
- Technical Troubleshooting and Problem-Solving
- Marketing Strategy Development
- Client Relationship Management

3.9 KEY PERSONNEL WITH BIOS

SENIOR MANAGEMENT TEAM

John Gary Grubbs, Managing Member. Mr. Grubbs has over forty years of project management and construction experience. As a general contractor, he directed all aspects of heavy civil construction, demolition, and emergency services business. Other expertise includes property development, rock mine operations, and road building. Mr. Grubbs directs large-scale debris management and recovery operations with revenues ranging from $100,000 to $200,000,000. He negotiates with federal and state funding arms on behalf of local and state governments affected by natural and man-made disasters. To ensure compliance with FEMA eligibility requirements, Mr. Grubbs serves as a liaison between the government (client) unit and Federal and State agencies. He has directed over 50 projects during the nineteen separate Presidential Disaster Declaration. In the last several years, Mr. Grubbs has managed operations in Hurricane Hermine, Matthew, and Irma. He managed operations in over 20 separate notices to proceed from Marathon to Neptune Beach. He managed operations for 23 separate Florida applicants ranging from Coconut Creek south to Key West during the 2005 Hurricane season and 43 separate Florida applicants ranging from Jacksonville south to Key West and west to Punta Gorda during the 2004 Hurricane season.

Terry Hunt, Managing Member Terry has been developing commercial properties in the tri-county area for over 30 years. TL and his staff have primarily been in the mini storage business since 1980. The mini business's trade name is United Self Mini Storage, and all these facilities are in the Tampa Bay area. Terry has also developed and built Office/Warehouse complexes. Currently, United Business Park is being developed, including the TL Hunt Inc. corporate office and a host of first-class tenants. The TL Hunt companies have survived the recent economic downturn and are poised to reach out for more successful businesses in the years to come.

Michael Cannon, Member Mr. Cannon has more than 35 years of construction experience; is responsible for a $100 million + company's financial and operational success. Mr. Cannon has extensive experience in all aspects of the construction process and experience in multiple project types, including commercial office, gaming, resorts/hotels, public facilities, retail centers, and entertainment venues. Mr. Cannon is educated in construction engineering.

PROJECT MANAGERS

Blaise Grubbs, Contracts/Office Manager Ms. Grubbs served as a project manager for the City of Blountstown, Town of Yankeetown, Hernando County Hurricanes Hermine and Irma, Pasco County, 2007 Tropical Storm Debbie Flooding, Town of Lady Lake tornado recovery effort, and for multiple jurisdictions, in 2004 managed Pasco County Hurricane Jeanne & Rita with revenue of over $3,000,000.00. Ms. Grubbs ensures that all subcontractors are pre-qualified, including background checks, ensuring appropriate insurance coverage is in place, and executing subcontract agreements. She issues proper pay rate documentation following field negations and communicating pertinent information to the data center from field operations and other subcontractor management functions. When GES is in a non-response mode, Ms. Grubbs assists with proposal development and asset management of GES in-house day-to-day operations. Ms. Grubbs reviews all pre-event contracts and performs the annual training for the municipalities to keep everyone up to date on the FEMA eligibility requirements' daily changes.

Kelly Underwood, Operations Manager Mr. Underwood brings project management expertise that includes a wide variety of disaster response initiatives, including recovery from tornadoes, ice storms, floods, tropical storms, and hurricanes. He recently served as project manager for Hurricane Irma for Hernando County, FL, Hurricane/ Superstorm Sandy 2012 in New York, where he worked with ECC, and included the City of Houston, following Hurricane Ike in 2008. He managed operations for 23 separate Florida applicants ranging from Coconut Creek south to Key West during the 2005 Hurricane season and 43 separate Florida applicants ranging from Jacksonville south to Key West and west to Punta Gorda during the 2004 Hurricane season.

J.R. Gray, Field Supervisor Mr. Gray's duties include overseeing and supporting the day-to-day operations of all active projects. He is responsible for ensuring that crews and monitors are knowledgeable with respect to their job responsibilities and that they are abiding by FEMA guidelines. He conducts tailgate sessions and safety meetings with subcontractors, identifies temporary debris staging and reduction sites, and monitors operations to ensure all work efforts are completed in an orderly and timely manner.

Ronnie Richards, Senior Project Manager Mr. Richards has worked on all recovery projects over the last ten years for GES. Mr. Richards is a constant presence in field operations and is very experienced in conflict resolution regarding operational and regulatory matters. Mr. Richards's "hands-on" approach to operations has earned him the highest level of respect from his peers in the industry. Mr. Richards recently had specific oversight for the certification of over 1000 haul units for GES operations in the City of Houston following Hurricane Ike. Mr. Richards was required to liaison between our subcontractors and the monitoring firm to expedite the massive amounts of documentation associated with this effort. Under Mr. Richards's leadership, we not only met our goals in this effort but finished the project well ahead of schedule.

Grubbs employs On-Call Project Managers During emergency recovery efforts on an as-needed basis. Most of our seasonal staff are former United States Army or state/federal emergency management employees. They receive annual training regarding new FEMA directives and field protocols implemented to enhance customer service.

BUSINESS SUPPORT SERVICES

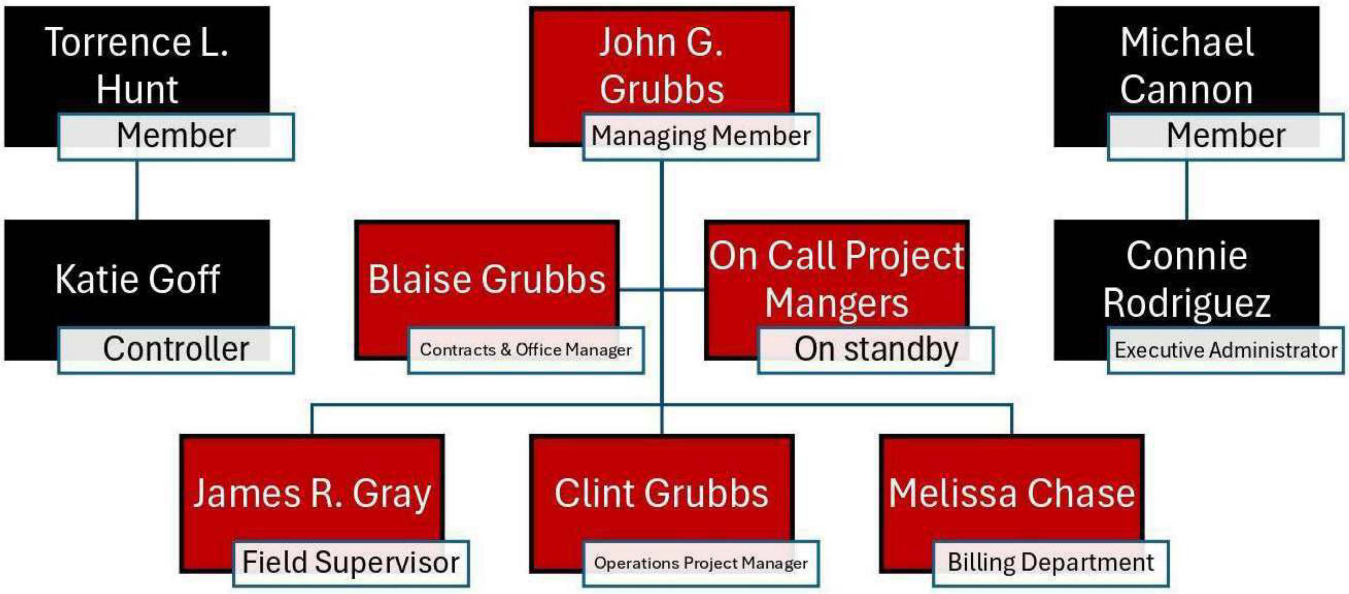
Connie J. Rodriguez, Client Relations Director Ms. Rodriguez has more than 25 years of administrative experience, with more than 18 years of experience in the emergency services & construction industry. Ms. Rodriguez is responsible for all project bonding requirements, including bid bonds, payment and performance bonds, and Consents of Surety and Final Consents as contracts ended. Ms. Rodriguez handles all management for state and local business licensing for Grubbs, & contractor licenses, and business licenses. Manage project storm management, executive travel, and corporate events. Ms. Rodriguez oversees the administrative office staff.

Katie Goff, Controller Ms.Goff oversees day-to-day financial operations for GES. She is responsible for accounts payable and receivable, bank reconciliations, job costing, credit card account management, sales/excise tax, internal audits support, client account reconciliation, and IT support.

Melissa Chase, Contracts & Data Center Manager Ms.Chase is responsible for the day-to-day management of the proprietary debris management documentation system. Ms. Chase, and her staff process all paperwork associated with the recovery effort, such as daily haul summaries, invoices, truck certifications, and associated documentation and spreadsheet reporting formats. When GES, LLC is in no-response mode, Ms. Chase assists Ms. Grubbs in day-to-day and contract management.

*All Grubbs Emergency Services, LLC personnel are residents (State of Florida) and on stand-by if a man-made or natural disaster may occur.

3.10 Grubbs Emergency Services, LLC - Organizational Chart



3.11 SUBCONTRACTOR PLAN AND LISTING

Our team is committed to providing opportunities for Small Business Concerns (SBCs), Minority-owned (WMBE), and local subcontractors for all proposals and all subsequent awards, missions, and tasks.

Many of the services required under this solicitation will be performed using our team's existing nationwide personnel, facilities, and equipment. However, based on our previous large-scale, catastrophic events, we expect that qualified, skilled subcontractors will provide more than 50% of the required services needed for each specific task order assigned under a contract. Grubbs takes great pride in our long history of rapidly mobilizing and effectively managing large teams of SBC contractors. Subcontracting percentages for each assignment will depend mainly on the magnitude of the disaster, the size of the area affected, and local firms' capabilities. We are committed to meeting our clients' SBC goals and are confident that we can accomplish this for any event in any area of the country.

Development of SBC Goals

Each Grubbs team member has a strong and documented history of meeting SBC goals on past projects. To illustrate our commitment to support these goals and other state and federally mandated goals, we have ardently pursued and solicited region/sub-region-specific subcontractor commitments. A sample of potential resources is identified in our Subcontractor Source List. Before accepting target participation goals for SBCs in any solicitation, the Grubbs team evaluates each specific small business category's resource availability within a proposed region. The team's evaluation is based on information obtained from multiple sources. The actual numbers of current and potential SBC contractors identified in each category and location within a region or sub-region are considered when establishing goals. Grubbs fully complies with the federal requirements of the CFR 200.312 when recruiting MBE/DBE/WBE businesses.

Method Used to Identify Potential SBC Solicitations

Having utilized subcontractor support on past projects, Grubbs Emergency Management Services, LLC, has developed and maintained an extensive subcontractor database. To expand this database and include more SBCs in the region, additional published electronic data resource information has been used. A prospective subcontractor packet is transmitted to each of the SBCs requesting relevant information regarding classification, geographic service area, equipment, personnel resources, description of services provided, and critical point-of-contact information.

Subcontracting Administration

Subcontracting administration is the responsibility of Grubbs Emergency Services, LLC's company-designated, on-site management personnel. Subcontract administration functions include, but are not limited to, the following:

- Conducting pre-performance and post-award conference and issuing notices-to-proceed.
- Receiving and processing submittals, including requests for payment.
- Monitoring progress to ensure compliance with subcontract requirements, including quality control and
- safety standards.
- Assisting in the preparation of findings of fact concerning disputes or claims.
- Identifying, negotiating, and documenting subcontracts.
- Maintaining detailed documentation of subcontract files.
- Cooperating in any studies or surveys, as may be required.
- Submitting periodic reports, as agreed, to demonstrate compliance with the subcontracting plan.
- Preparing and submitting standardized forms.

3.12 a Management of Multiple Contracts and Emergency Response

Grubbs Emergency Services, LLC (GES), is structured to effectively manage multiple disaster recovery contracts concurrently. Our experience, demonstrated by managing over 46 contracts during the 2004-2005 hurricane seasons, proves our capacity to handle significant regional or statewide emergencies. Our Contractor Mobilization Plan ensures a phased and rapid deployment of personnel and equipment to affected areas. To support this, GES maintains a vast network of subcontractors, allowing us to quickly scale our workforce and resources as needed.

3.12 b MULTIPLE ACTIVATIONS

Management procedures encompass methods for accomplishing the work, communications, quality assurance/control verifications, and corrective measures. This section also highlights our approach to task management and execution, as well as GES's capabilities to perform and manage each task. These include:

- Multiple site activity management
- Implementation of a Disaster Response Action Plan (DRAP)
- Preparation of work plans and other pre-work submittals, as required by Client
- Timely acquisition of permits, licenses, and certificates
- Field Operations

The Grubbs Field Management team will evaluate the components of each activity and disseminate information to the Operations Manager. The Operations Manager will assess the activity requirements and formulate an initial plan for approach and resource allocation. A key feature of our management philosophy is that the Operations Manager remains with the project throughout all phases—from start to finish—to ensure management and QA/QC continuity. This concept also extends to other key team personnel, assuring continuity in our operational approach.

CONTRACTOR MOBILIZATION PLAN

Grubbs' response preparations begin once a "Notice to Proceed" is given by the Applicant or Applicants and will progress as follows:

Portable power supplies for the contractor's field office, Temporary Debris Staging and Reduction Site (TDSRS) inspection towers, and communications trailers will be safety inspected and load tested before departure. The resources necessary to adequately support the Applicant's project will be deployed as follows:

- 24 hours: 25% of staff deployed
- 48 hours: 50% of staff/subcontractors deployed
- 72 hours: 75% of subcontractors deployed
- 96 hours: 100% of subcontractors deployed

Disaster Response Activation

- Stage equipment and personnel outside the strike zone
- Mobilize contractor crews into the affected areas with street clearing commencing within 6 hours of the storm's passing.
- Prepare an event-specific operations plan for the Applicant within 24 hours
- Stage communication equipment, e.g., satellite and cellular phones, laptop computers with wireless internet connections.
- Stage self-contained and self-powered Mobile Command units. These units allow access to fully operational temporary offices at multiple locations around the state. The units are equipped with scanners, computers, fax machines, copiers, and all supplies required to run a fully functioning remote office.

- Deploy disaster equipment to influence a prompt response to the affected disaster zone.

Recall of Personnel

Before a storm, all contractor operations management and project managers will be contacted to report their assignment. Next steps include

- Support personnel will be placed on notice by the Contractor's Management
- Concurrently, primary subcontractors will be notified and apprised of the mobilization plan for deployment to the impact zone.
- Transport operators will be provided with instructions regarding equipment needs, equipment pickup location, and the final delivery point for staging.
- Equipment operators and other key personnel will be instructed to report to their pre-assigned deployment location for briefings, assignments, and travel to the impacted work area.
- As part of the Health and Safety plan, all personnel will be required to attend a site/task-specific hazard communications and safety training briefing before commencement of any tasks to ensure compliance with the Accident Prevention plan.

Contractor Advance Management Team

The Contractor's Advance Management team members will report to a designated location for tasking and instructions as dictated by the "Notice to Proceed." Project managers, with the Applicant's involvement, will determine the location(s) for the team's temporary field office, communications unit, and support systems in the disaster area.

Example

Grubbs Emergency Services, LLC, maintains a vast network of highly knowledgeable and trained personnel, including retired Army Corps of Engineers staff, to support multiple concurrent contracts. In 2004 and 2005, Grubbs was activated on over 46 contracts simultaneously, demonstrating our capacity to respond professionally and effectively restore communities. We processed over 250,000 cubic yards of debris per day during these operations.

All work associated with this bid will be under the direct supervision of Mr. John G. Grubbs, Managing Member, who has spent the last 25 years addressing emergency response and recovery efforts. Mr. Grubbs is supported by a team of experienced associates with a proven track record in storm response and recovery. Key personnel assigned to this contract have been Grubbs employees for over ten years.

TAB 4

OPERATIONAL PLAN

DISASTER DEBRIS MANAGEMENT PLAN

The Grubbs team has extensive experience organizing and managing efficient, well-documented debris removal programs for events ranging from relatively small, localized events such as the cleanup from Tropical Storm Gabrielle (under 50,000 cubic yards) to large, widespread disasters such as debris removal for the 2004 Hurricane Season (over 8 million cubic yards).

4.1 Debris Removal Program Overview

Our management approach combines our experience managing recovery work for disaster events and working with a wide variety of local, state, and federal Clients on engineering and construction programs across the United States.

The Debris Management Work Plan is a dynamic guide for management, supervisory, and field personnel. As needed, the plan is tailored to accommodate unique local circumstances or conditions or contract to amendments after an event occurs. Our ability to quickly adjust to the ever-changing requirements and storm differences separates us from our competition.

Our project team is set up with one goal in mind to provide the personnel and technical capabilities necessary to effectively and efficiently respond to any level storm for which our clients require assistance. The Grubbs team focuses on:

- ✔ **Organization and Reliability**: Our dedicated personnel provide debris management expertise that is unparalleled in the industry. The team is committed to anticipating and managing our client's needs and expectations as outlined in our Disaster Response Action and Mobilization Plans.

- ✔ **Turnkey Approach:** Grubbs Emergency Services, LLC is geared to address complex problems and challenges inherent with any major disaster. Our team is supported by a network of subcontractors and sub-consultants who are available on a 24/7 basis.

- ✔ **Technology:** Using state-of-the-art IT applications, such as our web-based Debris Management System, we ensure the efficiency of operation and a streamlined approach to managing all aspects of disaster recovery services…from the first push through contract close-out.

- ✔ **Value-Added Services:** Combining our experienced managers, extensive resources, and data management tools, we provide comprehensive value-added services associated with all debris removal operations. This includes expertise that reduces the time and cost of recovery, a practical approach to project management aligned with client expectations to return to normal as quickly as possible, and proficiency in Federal Highway Administration (FHWA) operations, including adherence to FHWA-1273 contract provisions. Our experience also extends to FEMA Public Assistance program navigation. Grubbs is registered with Homeland Security on their E-Verify employment verification; our Company ID Number is 590294.All Grubbs employees and subcontractors are registered and required to register before starting to work any Federally Funded Contracts.

Mobilization Timeframes

The Contractor's response preparations begin once a" Notice to Proceed" is given by the applicant and will progress as follows:

Portable power supplies for the Contractor's field office, the temporary debris staging and reduction site (TDSRS) inspection towers, and communications trailers will be **safety inspected** and **load tested** before departure. The resources necessary to adequately support the applicant's project will proceed as follows:

- ✔ 24 hours: 25% of staff deployed.
- ✔ 48 hours: 50% of staff/subcontractors deployed.
- ✔ 72 hours: 75% of subcontractors deployed.
- ✔ 96 hours: 100% of subcontractors deployed.

Disaster Response Activation

- ✔ Stage equipment and personnel outside the strike zone
- ✔ Mobilize contractor crews into the affected areas with street clearing commencing within 6 hours of the storm's passing.
- ✔ Prepare an event-specific operation plan for the applicant within 24 hours.
- ✔ Stage communication equipment, e.g., satellite and cellular phones, laptop computers with wireless internet connections.
- ✔ Stage self-contained and self-powered Mobile Command units. These units allow access to fully operational temporary offices at multiple locations around the state. The units are equipped with scanners, computers, fax machines, copiers, and all supplies required to run a fully functioning remote office.
- ✔ Deploy disaster equipment to influence a prompt response to the affected disaster zone.

Recall of Personnel

Before a storm, all contractor operations management and project managers will be contacted to report their assignment. The next steps include:

- ✔ Support personnel will be placed on notice by the Contractor's Management.
- ✔ Concurrently, primary subcontractors will be notified and apprised of the mobilization plan for deployment to the impact zone.
- ✔ Transport operators will be provided with instructions regarding equipment needs, equipment pickup location, and the final delivery point for staging.
- ✔ Equipment operators and other key personnel will be instructed to report to their pre-assigned deployment location for briefings, assignments, and travel to the impacted work area.
- ✔ As part of the Health and Safety plan, all personnel will be required to attend a site/task-specific hazard communications and safety training briefing before commencement of any tasks to ensure compliance with the Accident Prevention plan.

GES Staff Training

Grubbs Emergency Services, LLC recognizes the dedication of our experienced staff. We foster a culture of continuous learning, encouraging our team to actively pursue all available training opportunities in debris management.

National Incident Management System

The National Incident Management System (NIMS) and the Incident Command System (ICS), developed by the Secretary of Homeland Security at the request of the President of the United States, establish a uniform set of processes and procedures for all levels of emergency response personnel to conduct emergency operations effectively.

NIMS and ICS training is mandatory for all federal, state, local, tribal, private sector, and non-governmental personnel with direct roles in emergency management and response.

To be eligible for preparedness funding, grant applicants must certify, as part of their applications, that they and their vendors have met NIMS requirements. This ongoing certification process is designed to refine and enhance emergency operations nationwide.

Grubbs Emergency Services, LLC is proud to confirm that our entire staff is fully compliant with all NIMS requirements.

OSHA-GENERAL INDUSTRY (10-Hour) TRAINING COURSES

To enhance hazard awareness within our industry, all staff members are required to complete the OSHA General Industry 10-Hour introductory course. We have an approved OSHA instructor on staff who will conduct these mandatory training sessions. Furthermore, our comprehensive safety program mandates that each employee receives specialized training tailored to the specific hazards associated with their operational responsibilities.

HAZWOPER

A significant portion of our workforce has completed hazardous materials handling training at the operations level. This expertise has been successfully applied in recent projects, such as those in the City of Key West and the City of Marathon following Hurricane Wilma, where our teams performed the essential tasks of collecting, identifying, packaging, and disposing of household hazardous waste.

Quality Control Plan

Grubbs Emergency Services, LLC approaches all work efforts utilizing the Contractor Quality Control Plan (CQCP) as a framework for the contractor's process for delivering quality disaster recovery and debris management services. The Client's plans and specifications define the expected results or outcomes. The CQCP outlines how those results will be achieved and helps validate that the contractor, as an organization, has addressed the essential elements of its quality process. These guidelines address what should be in the CQCP to be acceptable to the Client and what elements the Client's QA process needs to ensure quality without usurping the
contractor's responsibilities. The work effort incorporates production measurements related to potential client concerns, such as the environment, safety procedures, project schedule, documentation, and inspections.

The following overview highlights our plan's vital elements due to the Grubbs Quality Control Plan's physical size.

Preparing Pre-Work Submittals and Work Plans (QA/QC Punch Lists)

The Grubbs team will collaborate with the Client to develop standardized formats for work plans, reports, and other deliverables. This approach provides efficiencies when preparing submittals and facilitates Client review of documentation to confirm that all critical elements have been addressed promptly.

Work plans and pre-work submittals will provide written specifications for the entire work effort. Their submittal and approval will constitute an agreement between the Client and the Grubbs team regarding the work scope and execution. Grubbs team members will prepare and submit work plans following the submittal schedule established during activity negotiations. We anticipate submitting the following plans, as a minimum, for each activity:

- ✔ Comprehensive Hazard Communications Plan
- ✔ Site Management Plan (SMP)
- ✔ Site Safety and Health Plan (SSHP)
- ✔ Contractor Quality Control Plan (CQCP)
- ✔ Accident Prevention Plan
- ✔ Activity Management Methods and Controls

Preliminary Phase Punch List

- ✔ Review all contract requirements with Client
- ✔ Ensure compliance of personnel, equipment, materials to the contract requirements
- ✔ Coordinate all submittals including certifications, permits
- ✔ Ensure the capability of equipment and personnel to comply with the contract requirements.
- ✔ Ensure preliminary testing is accomplished, e.g., soil samples near burn pits, TDSRS
- ✔ Coordinate, surveying, and staking of the work.

Activity	Responsibility	Timeframe	Methodology
Review operations	Project Manager	Before starting debris cleanup activities	On-site visit and inspection
Review permit requirements	GES EHS Officer	Before starting debris cleanup activities	Review of documents
Conduct Safety Plan review	GES EHS Officer	Before starting debris cleanup activities	Review of document
Environmental Plan review	GES EHS Officer	Before starting debris cleanup activities	Review of document
Hazards Analysis Plan review	GES EHS Officer	Before starting debris cleanup activities	Review of document
Accident Prevention Plan review	GES EHS Officer	Before starting debris cleanup activities	Review of document
Training records updated	GES EHS Officer	Before starting debris cleanup activities	Review of document
Reduction of site inspection	GES EHS Officer	Before starting debris cleanup activities	Physical inspection of the site(s)
Survey and mark boundaries of site; conduct environmental testing of TDSRS, as required	GES EHS Officer	Before starting debris cleanup activities	Physical inspection of the site(s)

Startup Phase Punch List

- ✔ Review the contract requirements with personnel who will perform the work
- ✔ Inspect startup of work
- ✔ Establish standards of workmanship
- ✔ Provide training as necessary
- ✔ Establish a detailed testing schedule based on the production schedule

Activity	Responsibility	Timeframe	Methodology
Safety Plan enforcement	Project Manager	Daily	On-site inspection
Environmental Plan enforcement relating to noise, smoke, dust, traffic, drainage, or general containment acts	Project Manager	Daily	On-site inspection
Monitor incoming trucks; check compliance with QC plan	Project Manager	Daily	On-site inspection
Debris removal progression	Project Manager	Daily	On-site inspection
Personal property damage assessment	Project Manager	Immediately	On-site inspection

Reduction of site inspection	Project Manager		
Reduction of site adjustments	Project Manager		
Monitor site for adequate personnel and equipment	Project Manager	Daily	Daily Report

Production Phase Punch List

- ✔ Conduct intermittent or continuous inspection during cleanup to identify and correct
- ✔ deficiencies
- ✔ Inspect completed phases before scheduled client acceptance
- ✔ Provide feedback and system changes to prevent repeated deficiencies

Activity	Responsibility	Timeframe	Methodology
Safety reports secured from PM	GES EHS Officer	Weekly	Written report provided to the Client
Performance and progress inspections	Project Manager	Daily	Written report
Discussion of performance issues	Project Manager	Daily	Tailgate or safety meetings
Subcontractors performance evaluation	Project Manager	Weekly	Verbal and written notification
Corrective action for deficiencies	Project Manager	Daily	Verbal and written notification
	Project Manager	Before settlement	Written report

FEMA PUBLIC ASSISTANCE PROGRAM COORDINATION AND FHWA

Background

The U.S. Department of Homeland Security's Federal Emergency Management Agency (FEMA), through its Public Assistance (PA) Grant Program, provides reimbursement to state and local governments, as well as eligible private non-profit organizations, for disaster-related work. This program covers the actual costs incurred, and also funds specific hazard mitigation projects.

To streamline PA grant processing, FEMA differentiates between emergency work and permanent work, which includes the repair or replacement of infrastructure such as roads, buildings, and schools. FEMA further categorizes disaster-related work into seven distinct categories.

Since 1993, Grubbs Emergency Services, LLC, has consistently demonstrated expertise in navigating FEMA's Public Assistance program to secure reimbursement for our clients. The 1999 tornado cleanup and restoration projects in Del City and Grady County, Oklahoma, exemplify this capability.

In the wake of an F5 tornado, one of the most devastating events ever recorded in Tornado Alley, Grubbs Emergency Services, LLC, responded swiftly. With estimated wind speeds reaching 260-318 mph, the damage to Del City was catastrophic. Immediately following the event, our team conducted a comprehensive damage assessment and provided the client with detailed estimates for construction and demolition (C&D) debris removal. The destruction was immense: homes were ripped from their foundations and disintegrated, vehicles became airborne projectiles, and trees were stripped bare.

During our response, Grubbs Emergency Services, LLC, identified that Del City was unaware of the eligibility of certain affected areas for FEMA Public Assistance funding, particularly regarding hazardous waste abatement, a critical component of the city's recovery. We provided crucial guidance on the specialized handling protocols required for this task.

Mobilization was completed in under 36 hours, leveraging both local resources and company-owned equipment. Furthermore, Grubbs assisted Del City officials with the complex documentation and reporting procedures necessary to support their FEMA Public Assistance reimbursement claims, encompassing debris removal (Category A) and all other eligible categories (B-G).

Grubbs Emergency Services, LLC, understands the immense pressure that significant disasters place on state and local governments. The need to rapidly identify, document, and execute eligible work, while adhering to strict regulatory deadlines, can be overwhelming. Often, applicants and sub-grantees lack the necessary resources or experience to maximize reimbursement under the FEMA Public Assistance (PA) Program.

Leveraging our extensive experience in administering the PA Program, Grubbs Emergency Services, LLC, excels at maximizing grant funding for impacted applicants. We have successfully recovered millions of dollars in funding from FEMA, the Federal Highway Administration (FHWA), the Natural Resource Conservation Service (NRCS), and insurance sources on behalf of our clients.

Grubbs Emergency Services, LLC, provides comprehensive support to navigate the complex recovery and reconstruction process, offering unparalleled attention to detail and proactive involvement. Our services encompass assistance with all FEMA Public Assistance categories, including:

- ✔ Category A: Debris Clearance
- ✔ Category B: Emergency Protective Measures
- ✔ Category C: Road Systems
- ✔ Category D: Water Control Facilities
- ✔ Category E: Buildings and Equipment
- ✔ Category F: Public Utility Systems
- ✔ Category G: Other"

4.2 Organizational Structure and Subcontractor Management

Contractor Advance Management Team

The Contractor's Advance Management team members will report to a designated location for tasking and instructions as dictated by the "Notice to Proceed." Project managers, with the Applicant's involvement, will determine the location(s) for the team's temporary field office, communications unit, and support systems in the disaster area.

Operation Managers serve as the primary liaison between the Client and all Grubbs staff engaged in the debris removal operation. Their core responsibilities include monitoring operational efficiency and ensuring strict compliance with all applicable eligibility and regulatory requirements, while also providing regular feedback to the Client. These managers direct daily recovery work, maintaining efficient progress in restoration efforts. They adapt work schedules to align with project needs and activities, and develop comprehensive plans to address all facets of the operation. This includes coordinating plans with the Client, diligently monitoring the entire effort to ensure timely delivery, and collaborating with field staff to implement necessary schedule or operational adjustments for enhanced efficiency.

All Project Managers and Field Supervisors report to the Operations Managers and are responsible for ensuring that work is conducted only in those areas designated by the Client. The management team will not allow work to commence in additional areas until directed by the Client. The field managers will be responsible for the safety of all personnel and equipment and are responsible for the collection of daily personnel and equipment time logs and the distribution of such documents to the Operations Manager with a copy given to the Client.

A Data Center Manager monitors operation through our tracking system, advises the Operations Manager on methods to improve efficiency and will produce daily reports to evaluate crews' productivity.

Contingent upon receipt and acceptance of a "*notice-to-proceed,*" the following plan will be utilized.

Subcontractor Management

In addition to our Subcontracting Plan, the Grubbs team will establish effective controls to monitor subcontractor progress consistent with the subcontractor's contractual obligations. Accomplished primarily through periodic subcontractor progress reports, subcontractor performance evaluation meetings, direct supervision, issuance of cure notices, and frequent communication with subcontractors. Subcontractors will be monitored and managed from a variety of other perspectives, including:

- ✔ Verification that subcontractor personnel are trained and implement safe work practices.
- ✔ The Operations staff will exercise engineering, quality assurance, safety, and administrative surveillance over each subcontractor to ensure satisfactory performance and compliance with all applicable laws and regulations.

On-going review and analysis of subcontractor progress and performance, coupled with the prompt implementation of corrective action, have proven useful tools for completing subcontracts. Each subcontractor is required to participate with the Grubbs team in developing a progress schedule to ensure the performance of the subcontracted work within the established performance period. The Operations staff will meet with subcontractors to clearly understand the scope, timing, and coordination of activities. Daily reports are prepared by both Grubbs Emergency Services personnel and subcontractor representatives to address significant events or problems in any of these areas. In addition, subcontractors are required to meet periodically with the team to discuss subcontractor performance. Problem areas are identified, addressed, and corrected at these meetings.

The Grubbs team uses pre-qualified subcontractors to perform essential portions of this contract and stand behind all GES subcontractors' work. Clients may prohibit the use of any GES subcontractor for reasonable cause.

4.3 Methods Used to Complete Assigned Tasks

Activity Management

The management procedures include methods for accomplishing the work, communications, and quality assurance/control verifications and, as necessary, corrective measures.

This section also highlights our approach to task management and execution, as well as GES capabilities to perform and manage each task. These include:

- ✔ Multiple site activity management
- ✔ Implementation of a Disaster Response Action Plan (DRAP)
- ✔ Preparation of work plans and other pre-work submittals, as required by Client
- ✔ Timely acquisition of permits, licenses, and certificates
- ✔ Field Operations

The Field Management team will evaluate the components of each activity and disseminate information to the Operations Manager. The Operations Manager will assess the activity requirements and form an initial plan for approach and resources. An essential feature of our management philosophy dictates that the Operations Manager remains with the project throughout all phases of work – from start to finish – to ensure management and QA/QC continuity. This concept also extends to other key team personnel, assuring continuity in our operational approach.

Preparing Work Plans and Other Pre-Work Submittals

The Grubbs team will collaborate with the Client to develop standardized formats for work plans, reports, and other deliverables. This approach will streamline the preparation of submittals and facilitate efficient Client review, ensuring that all critical elements are addressed promptly.

Work plans and pre-work submittals will provide detailed specifications for the entire project. Their submission and approval will establish a clear agreement between the Client and the Grubbs team regarding the work scope and execution methodology. Grubbs team members will prepare and submit work plans according to the schedule established during activity negotiations.

At a minimum, we anticipate submitting the following plans for each activity

- ✔ Comprehensive Hazard Communications Plan
- ✔ Site Management Plan (SMP)
- ✔ Site Safety and Health Plan (SSHP)
- ✔ Contractor Quality Control Plan (CQCP)
- ✔ Accident Prevention Plan

Permits, Licenses, and Certificates Acquisition

Depending on the extent and degree of damage, various permits, licenses, and certificates may be required for debris management work. Permitting processes vary by location and site regulatory status. The Grubbs team will collaborate closely with the Client, local agencies, and regulators to clarify and resolve compliance issues, determine requirements, and obtain necessary permits, licenses, and certificates.

Final delineation of specific permit requirements is expected during the finalization of the activity work scope. Even when formal permits are not required for some sites, the Grubbs team will identify all applicable requirements and demonstrate compliance.

Anticipated permits may include, but are not limited to:

- ✔ DOT Permits – oversized loads and commercial drivers' licenses
- ✔ Excavation Permits – land disturbance permit; construction permits; demolition permits
- ✔ Clean Water Act (NPDES) Permits – emergency discharge permit; indirect discharge permit; wetlands disturbance permit; stormwater management permit
- ✔ Clean Air Act (Emissions) Permits – burn permit (air curtain incinerators); stack monitoring permit; fugitive emissions (dust) control permit

Activity Management Methods and Controls

Grubbs activity teams will implement well-established management controls to ensure the successful completion of each activity. These activity-level controls stem from the mandated corporate- and program-level procedures described previously. This section highlights the activity-level management control methods that will be implemented throughout debris management activities.

Activity Reports and Record Documentation

The Grubbs team will prepare and submit operational reports throughout task performance. Ongoing activity reports will contain the following information:

- ✔ Contractor name
- ✔ Contract number
- ✔ FHWA Roads
- ✔ Daily and cumulative hours for each piece of equipment
- ✔ Reports and graphs to delineate production rates of crews, progress by area, and estimations of total quantities remaining and time to completion
- ✔ Daily and cumulative hours for personnel or equipment, by position or daily and cumulative cubic yards of debris, removed
- ✔ GES Management review and approval

Final Report

The Grubbs team will prepare a Final Report for each activity, submitted within 30 days of completion. This report will include:

- ✔ Discussion of activity requirements and results
- ✔ Copies of manifests, certificates, and related documents
- ✔ Logbooks and all other data that were taken during the implementation of the TO

Activity Meetings and Communications

Open communication and thorough documentation are crucial for the successful completion of each activity. Throughout each activity's execution, the Grubbs team will meet with Client representatives to conduct briefings, both proactively and as needed throughout the project.

The Grubbs team will provide a weekly record (confirmation notice) of all discussions, verbal directions, telephone conversations, and other communications concerning each activity involving a Grubbs or subcontractor representative. Confirmation notices will be sequentially numbered and will identify all participating personnel, topics discussed, and conclusions reached. The Grubbs team will forward a copy of each confirmation notice to the Client. If a confirmation notice concerns a change in scope, a cost proposal, or the schedule, it will be immediately forwarded to the Client's Contract Division for communication and distribution.

4.4 Concept of Operations:

The applicant is responsible for restoring public infrastructure following a disaster. They direct debris removal contractors, monitoring firms, and other emergency responders in the emergency debris clearance of essential transportation routes and critical public facilities, based on the assessment and guidance provided in this plan. These pre-event planning activities include, but are not limited to, an annual review of the following:

- ✔ **Staff Assignments**
- ✔ **Organization Overview**
- ✔ **Emergency Contact Lists**
- ✔ **Contracted Services**
- ✔ **Emergency Communications**
- ✔ **E-Verify Homeland Security**
- ✔ **Regulatory Agency Requirements**
- ✔ **Environmental, Health and Safety Plans**
- ✔ **Training**
- ✔ **FHWA and Priority Road Identification**
- ✔ **Assumptions and Situation**
- ✔ **Emergency Responder Roles and Responsibilities**
- ✔ **Debris Cleanup Priorities**
- ✔ **Debris Collection Methods**
- ✔ **Monitoring Program**
- ✔ **Truck Certification**
- ✔ **Load, Time/Material Tickets**
- ✔ **Site Setup**
- ✔ **TDSRS Management**
- ✔ **Volume Reduction Procedures**
- ✔ **Special Considerations (Private Property, Gated and Mobile Home Communities, Canal Debris Removal, Hazardous Stump and Tree Removal (HSTRS)**
- ✔ **DebrisManagementSiteCloseoutRequirements**

4.5 Work Stages

The following sections detail the work stages involved in our debris removal operations:

Emergency Debris Clearance

Historically, the term "emergency debris clearance" has referred to the initial "push" or clearance of debris from roadways and streets. For this plan, emergency debris clearance shall mean Client-directed work on any/all public and private properties.

Operations Managers are responsible for ensuring work is conducted only in impacted areas identified by FEMA or other federal/state agencies. Work will not commence in areas outside the designated boundaries unless explicitly tasked by the Client. Operations Managers are responsible for the safety of all personnel and equipment and for collecting daily personnel and equipment time logs, including distributing copies to the Client.

Maintenance and fuel vehicles will be assigned to ensure an adequate supply of fuel and maintain equipment operations.

Operations activities include:

1. Debris clearance from roads as tasked by Client
2. Debris clearance from parking lots, areas of ingress and egress, and any other areas, including hospitals, shelters, emergency operation centers, etc., as tasked by the Client. The priority of the operation is to clear the debris. Operators and hand crews will be instructed to perform in a workmanlike manner to prevent damage to salvageable or undamaged property and to prevent personal injury, thus ensuring compliance with the Accident Prevention Plan.
3. Attempt to make roadways and intersections as safe as possible from sight and traffic obstructions, thereby ensuring compliance with the Corporate Accident Prevention Plan.
4. All supervisors will maintain daily records of personnel and equipment hours.

Debris Pick-Up

Debris pickup is the transport of debris cleared from roadways and streets. Transport will commence upon receipt of an activity checklist and notice-to-proceed from the Client. Debris pickup operations will proceed in an orderly and manageable fashion on streets and roads with sufficient clearance for access, as designated by the Client. Residents will be informed of this activity through a Public Service Announcement.

Operations activities include:

1. Debris segregation and sorting will be conducted at the street/road level to the maximum extent practical, as instructed by the Client.
2. As part of the Health and Safety Plan, all debris will be safely and efficiently picked up and loaded into haul trucks to ensure compliance with the Accident Prevention Plan. Safety will not be compromised.
3. All crew foremen and field supervisors will be responsible for ensuring operations are as rapid and cost-effective as possible.
4. All construction and demolition materials will be sized using heavy equipment to ensure maximum loading and safe transport of materials, in compliance with EPA and DOT standards.
5. Apparent hazardous materials will be handled according to the Client's instructions or, at a minimum, the solicitation specifications.
6. To maintain traffic control and prevent personal injury, traffic control personnel with appropriate safety equipment will be stationed at each approach point of the work area, in compliance with the Accident Prevention Plan. Additional traffic control personnel will be stationed throughout the area as needed to ensure safe operations.
7. After debris is loaded into an appropriate haul vehicle, the required documentation will be completed before the vehicle departs the pickup site. This documentation will consist of the Client's four-part ticket.

Debris Hauling

Debris hauling consists of transporting debris to designated locations. Field supervisors will ensure that all hauling operations comply with local, state, and federal DOT standards, adhering to the Accident Prevention Plan component of the Health and Safety Plan.

Operations activities include:

1. All debris-hauling operators will receive area maps with client-designated assignment/authorized areas of operation and transport routes.
2. All debris haul operators will display signs provided by Grubbs Emergency Services, LLC, and, if applicable, the Client. These magnetic signs will be placed on the driver and passenger doors of the vehicle cab. Any signs provided by the Client will be displayed on both sides of the forward-most section of the vehicle bed unless otherwise directed.
3. Each haul truck will be numbered on the trailer to reflect pertinent identification and capacity. The number will be permanently marked and specific to that haul truck for the project's duration.
4. Hauling capacity for each truck will be based on the interior dimensions of the truck's metal dump bed and quantified in cubic yards.
5. A Client representative may be present for all measurements at the Client's discretion.
6. Once debris is loaded into an appropriate haul vehicle, the required documentation, including the Client debris load ticket, will be completed before the vehicle departs the pickup site.

Haul Truck Bed Configurations

Haul truck beds will be equipped with tailgates constructed of appropriate materials (e.g., chain link fence, safety fence) to safely contain debris, maximize certified load capacity, and allow for rapid dumping of debris.

Any haul truck bed that has, or will have, vertical extensions installed, will comply with the following restrictions:

- ✔ Haul truck bed extensions will comply with all applicable local, state, and federal laws.
- ✔ When installed, bed extensions will be located and secured to the front-end, left side, and right side of the bed.
- ✔ Bed extensions will not extend beyond 24 inches above the manufacturer's bed height.
- ✔ Bed extensions will be constructed of not less than 2" × 6" lumber placed flush against the manufacturer's bed and each subsequent lumber piece to withstand loader impact. Lumber will be secured to the manufacturer's bed with angle or channel iron and bolts. Each side extension will be secured with metal brackets and bolts to the front-end extension.
- ✔ Maintenance/fuel vehicles will be assigned and manned as needed to provide an adequate supply of fuel to maintain equipment operations.

Debris Staging (TDSRS)

Debris staging is the placement of disaster-related debris at a predetermined site and facility created to support post-disaster debris management functions.

Debris staging sites will be located, acquired, and designated by the Client. Construction of debris staging sites will commence immediately upon receipt of the notice-to-proceed from the Client. The Grubbs team will ensure that debris staging site construction is completed as rapidly as possible, as staging sites are critical to the debris removal process.

Site Access

Different points of ingress and egress will be established if possible. Quick acceleration and deceleration lanes, if approved by the Client, will be established adjacent to the primary road leading to and from site access points. The

appropriate authority has jurisdiction over the primary road right-of-way. All temporary roads leading to and through the debris staging site will be constructed and maintained for all-weather use (e.g., rock-laid roads).

Inspection Towers

Inspection towers will be constructed to facilitate observation and quantification of debris hauled for storage at the debris staging sites. Upon arrival at the staging site, the haul vehicle driver will give the remaining copies of the haul ticket to the Client representative.

Traffic Controls

Traffic control personnel with appropriate safety equipment will be stationed at the ingress observation tower to maintain vehicular and pedestrian traffic control. Additional traffic control personnel will be stationed throughout the site as needed to enforce proper dumping and prevent personal injury, ensuring compliance with the Accident Prevention Plan.

Environmental Protection

Grubbs' Environmental Protection Plan addresses erosion control, hazardous and toxic wastes, and dust and smoke control (following requirements of the Clean Water Act (CWA), the Storm Water Act, the Resource Conservation and Recovery Act, Superfund Amendments, the Reauthorization Act, and others). Our team uses an internal document to address environmentally sensitive issues, available in its entirety upon request. Environmentally sensitive areas (e.g., wetlands, habitats, historical sites) within or near a debris staging site will be avoided, designated as sensitive, protected, and restricted from access to minimize adverse impacts. Activity within environmentally sensitive areas will be prohibited, and all applicable environmental standards will be followed.

4.6 Risk Management, Safety, and Compliance

Hazardous and Toxic Waste Debris Operations Plan

Each component of the debris mission or activity (collection, staging, reduction, and disposal) may involve handling hazardous or toxic waste. The following overview addresses situations involving such waste.

The Environmental Protection Contingency Plan for Debris Removal Operations provides a plan of action for emergencies (e.g., fires, explosions, or releases of hazardous waste or materials) that could threaten life, property, or the environment. Each site presents unique hazards (e.g., terrain, waste containment) and notification procedures. Personnel directly involved with emergency operation procedures will be briefed on the tasks necessary for successful mitigation.

Action levels will be established and may change as each situation dictates. Anticipated action levels are as follows:

Action Level I: This level includes normal operating conditions with no suspected releases or hazardous environments. Operations may continue in Level D clothing with scheduled environmental monitoring.

Action Level II: This level is implemented when a release is suspected but unconfirmed. Personal protective clothing will be upgraded from Level D to Level C, including air-purifying respirators. Unscheduled environmental monitoring will detect the presence or concentration of the released product(s). Proper safe handling techniques will be used to reduce potential contamination.

Action Level III: This level is implemented when a release of hazardous waste or material has been confirmed, requiring immediate implementation of the environmental plan.

Emergency Procedures

Notification, isolation, protection, identification, spill/leak control, fire control, and termination procedures will be outlined in the Site-Specific Safety Plan based on the Client's current needs.

Environmental, Health and Safety Compliance

Work performed at debris staging sites will be conducted in compliance with all federal, state, and local environmental, health, and safety requirements. GES staff and subcontractors will maintain compliance with the Corporate Accident Prevention Plan, a component of the Corporate Safety Plan.

Cost and Schedule Control

The foundation for successful activity cost and schedule control is the accurate management of all activities. Project costs are tied directly to the scheduled sequence and duration of the work. We reflect this integration in our baseline activity planning and subsequent tracking through our resource-loaded project schedules. This form of schedule planning permits us to communicate the effort estimated for each element of the project and the effect of duration and production rates on the schedule and cost. Deviations from the baseline activity plan can then be easily modeled in real-time to illustrate their impact on cost and schedule.

Problem Resolution

Through the years, GES has learned that the best means of dealing with issues is early identification, prompt communication, and immediate action towards prevention or resolution. Through our project monitoring and reporting system, GES staff monitors each activity to address concerns before they impact project performance.

Quality Control

Quality control objectives are achieved for each activity through documented methods for planning, reviewing, implementing, and controlling activities affecting quality. The purpose of the Quality Control Program (QCP) plan is to provide a system that monitors employees and subcontractors' specific activities, each responsible for meeting the required quality objectives. These QC measures are used in all debris operations.

Specific QC requirements will be included in the Contractor Quality Control (CQC) Plan developed for each activity. Monitor QC activities; daily QC reports will be prepared following the contract specifications and submitted to the Operations Manager for all work activities.

Regulatory Compliance Assurance

Regulatory compliance and support are routinely provided as part of the QC Program. As required, Grubbs Regulatory Specialists will support the team on each activity in a well-defined framework to evaluate regulatory requirements and assurance of compliance. If necessary, our regulatory staff will work closely with the activity team and our Client during the activity planning phase (the initial 48 to 96 hours) to:

- ✔ Develop the applicable or relevant and appropriate requirements (ARARs)
- ✔ Determine requirements for and obtain necessary permits, licenses, and approvals.
- ✔ Determine any special field procedures for compliance.
- ✔ Address regulatory aspects of pre-work submittals and planning.

A Grubbs Regulatory Specialist will be available as needed to support the field staff throughout the restoration operation. For example, the Regulatory Specialist may be assigned to oversee waste and debris transportation and disposal, making sure that all regulations are followed relating to the labeling, storage, and disposal of waste materials. If hazardous waste

is involved, the regulatory specialist will review the completed Manifest Package and certify that the information is correct and compliant with federal, state, and local laws and regulations.

The Grubbs team will be responsible for the total management of transportation, storage, treatment, or disposal procedures throughout the debris management activities, including scheduling, control, documentation, and certifications. The Regulatory Specialist will review all information provided and develop the transportation and disposal criteria, procedures, and practices sufficient to protect personnel and the environment and preclude the potential hazards to off-site receptors from chemical, physical, and biological contamination.

Risk Management

The Grubbs team will be responsible for managing financial and legal risks associated with the performance of debris management activities in this contract. Each activity's requirements will be examined to characterize exposures to risk for the Client, the public, and Grubbs Emergency Services staff and subcontractors' personnel. Risk management procedures and methods include the following:

- ✔ The economic and physical risk management surveys for individual activities during an event.
- ✔ Sufficient insurance coverage to effectively manage exposure to risks in an event.
- ✔ Active subcontractor management to mitigate risk exposure.
- ✔ Accurate planning, budgeting, scheduling, and tracking to minimize overruns.
- ✔ Management of long-term exposures regarding waste transportation, storage, treatment, or disposal.
- ✔ Review of procedures for risk management, mitigation efforts, the success of managing risks and exposures, and the cost of risk management activities and overall effort.

Role of the Client

Successful execution of a Debris Management Work Plan requires a partnership and an understanding of roles and responsibilities. Our plan is based on the following assumptions of what our Client will ensure is accomplished:

1) Grubbs' coordination with agencies or units of government, such as local public works departments, state departments of transportation, and federal agencies to delineate roles and responsibilities.

2) Issuance of "Notice to Proceed," which sets forth the scope of work and terms.

3) Preparation and acquisition of necessary forms to perform debris removal, such as Rights of Entry, Hold Harmless agreements, insurance declarations, leases, etc.

4) Grubbs helps with the identification of an adequate number and size of sites for debris staging, as well as the location of pre-approved disposal sites. *Note: Our team has the capacity and experience to perform or assist in these or other tasks should the need arise.*

Preparing Work Plans and Other Pre-Work Submittals

The Grubbs team will collaborate with the Client to develop standardized formats for work plans, reports, and other deliverables. This approach will streamline the preparation of submittals and facilitate efficient Client review, ensuring that all critical elements are addressed promptly.

Work plans and pre-work submittals will provide detailed specifications for the entire project. Their submission and approval will establish a clear agreement between the Client and the Grubbs team regarding the work scope and execution methodology. Grubbs team members will prepare and submit work plans according to the schedule established during activity negotiations.

At a minimum, we anticipate submitting the following plans for each activity:

- ✔ Comprehensive Hazard Communications Plan
- ✔ Site Management Plan (SMP)
- ✔ Site Safety and Health Plan (SSHP)
- ✔ Contractor Quality Control Plan (CQCP)
- ✔ Accident Prevention Plan

Permits, Licenses, and Certificates Acquisition

Depending on the extent and degree of damage, various permits, licenses, and certificates may be required for debris management work. Permitting processes vary by location and site regulatory status. The Grubbs team will collaborate closely with the Client, local agencies, and regulators to clarify and resolve compliance issues, determine requirements, and obtain necessary permits, licenses, and certificates.

Final delineation of specific permit requirements is expected during the finalization of the activity work scope. Even when formal permits are not required for some sites, the Grubbs team will identify all applicable requirements and demonstrate compliance.

Anticipated permits may include, but are not limited to:

- ✔ DOT Permits – oversized loads and commercial drivers' licenses
- ✔ Excavation Permits – land disturbance permit; construction permits; demolition permits
- ✔ Clean Water Act (NPDES) Permits – emergency discharge permit; indirect discharge permit; wetlands disturbance permit; stormwater management permit
- ✔ Clean Air Act (Emissions) Permits – burn permit (air curtain incinerators); stack monitoring permit; fugitive emissions (dust) control permit

Training

Due to the potential for encountering hazardous environments and materials during debris removal operations, training will be contingent upon each site's specific conditions. However, site-specific training does not exempt personnel from the necessary training set forth by the Grubbs team for activities in or around debris removal operations or emergency operations.

Site-specific training requirements may include, but are not limited to, types of hazards, quantities and locations of hazards, confined spaces, safety and health considerations, equipment considerations, capabilities of site personnel and equipment, and hazard communications.

Safety Precautions

Water Trucks

The required number of water trucks will be stationed at all debris staging sites to reduce the threat of fire and, if necessary, for fire suppression. Water trucks will also dampen areas, including temporary roadways, to suppress dust from trucks entering and leaving the site.

Fire Extinguishers

Fire extinguishers will be located throughout the debris staging site, as required by the site management plan, site safety plan, OSHA requirements, and Client. All debris staging site personnel will be trained in incipient fire suppression

operations and safety procedures, including the use of fire extinguishers and water trucks, to ensure compliance with the Accident Prevention Plan.

Field Supervisors/Crew Foreman

Debris staging site supervisors will be responsible for managing all site operations, including safety, haul load inspection, segregation, traffic control, dumping, reduction, security, and remediation.

Hazardous Material Containment Area

Our team will construct each hazardous materials containment area using the following methods:

1. To determine the existing area's subgrade, test holes will be excavated to various depths using a backhoe. If the material is suitable for berm construction, Grubbs personnel will excavate a 30' × 30' area to a depth satisfactory to the contracting officer. The excavated material will be used to construct a five-foot berm around the perimeter. If the material is unsuitable, suitable material will be hauled in from an approved off-site source. The berm's crest will have a minimum two-foot-wide flat surface, sufficient for placing stacked hay bales.

2. The cell will be lined with a heavy-gauge plastic liner overlapping the hay bales. The liner's perimeter will be secured using an anchor trench and covered with six feet of soil to prevent punctures. Ten feet off-center in the containment area's interior, metal posts with welded 2' × 2' bases will be installed. Each post will have a tee fitting at the top and a minimum 24-inch pipe to protect the plastic cover during rain or when the hazardous material containment area is not in use.

3. An access ramp, constructed of excavated materials, will be provided to allow safe and productive placement of hazardous materials. If incompatible materials are to be stored, the containment area will be modified by constructing separator berms with an additional heavy-gauge plastic liner to provide complete separation. These separator berms will be built high enough to replace the interior supports. Additional access ramps will be constructed to provide entrance to each required cell.

Debris Staging Site Remediation

Remediation of debris staging sites is the process of returning them to pre-use and, in some cases, pre-event condition. This remediation is performed in four phases:

- ✔ Phase 1: Pre-use Inspection, Sampling, and Documentation.
- ✔ Phase 2:Environmental, Health, and Safety Compliance.
- ✔ Phase 3: Closure procedures.
- ✔ Phase 4: Final inspection, release, and acceptance.

Pre-use Inspection

Before use, each debris staging site requires an inspection for the following: existing topography; existing vegetation (grass, shrubs); on-site or near-site water sources; existing structures and their current condition; and any other distinguishing characteristics, such as hazardous and non-hazardous materials stored on-site. An introductory Environmental Impact Statement, following the Grubbs Environmental Protection Plan, will be completed.

Environmental Sampling

Random surface and subsurface soil samples will be taken and sealed in containers for comparison with post-use samples taken at site closure. Before sealing, a small portion of each sample will be field-tested to determine the presence of contaminants. Samples will be taken from any potentially impacted on-site and off-site water sources and

stored and tested using the same criteria. After operations end, post-use water and soil samples will be taken following the same standards. Both pre- and post-use samples will be tested in a certified laboratory to determine the presence of contaminants.

- Contaminants identified in the pre-use field test (determining whether a particular site or area of a site will be used for staging) will be agreed upon by a Grubbs Operations Manager and the Client.

- Contaminants identified in the post-use field test (results that were not present in pre-use test results, remediation of the site, or an area of the site) will be remediated following federal, state, and local regulations, as well as current industry standards

Documentation

A detailed description of each site will be prepared, including sketches or drawings to illustrate its current condition and content location. Additionally, still photographs and videos will be taken of each site, both at ground level and aerially, to further illustrate the pre-use condition and contents.

Debris Segregation

Debris segregation is the proper physical sorting of mixed debris into (5) five good categories:

1) Vegetative
2) Construction and Demolition (C&D)
3) Hazardous and Toxic Waste (HTW)
4) Salvageable/Recyclable
5) White Goods

Street/Road Level Segregation

Once the job foreman directs debris removal personnel to segregate debris into the five categories listed above, white goods and HTW will be left at the curbside unless otherwise specified by the Client. Debris segregation at the street/road level will not take precedence over safe and rapid completion of street/road debris removal operations.

All personnel conducting debris segregation at the street/road level will receive a safety briefing on potential hazards and injury prevention to ensure compliance with the Accident Prevention Plan.

Debris Segregation at Staging Sites

Staging site supervisors will ensure that all debris haul operators deposit debris in areas designated for the specific type of debris hauled. Vegetative debris will be placed into two separate piles. The first pile will be a dumping point until a sufficient quantity has been accumulated to begin a continuous reduction operation. At that point, dumping will commence on the second pile until the first pile's reduction is complete. This rotation will continue until the task is completed.

All personnel involved in vegetative debris segregation operations will receive a safety briefing to ensure compliance with the Accident Prevention Plan.

Debris Reduction

The following guidelines detail debris reduction operations not previously addressed. If required by the Client, night operations may be conducted using the method (burning or grinding) specified. Night operations will only be conducted after the Client determines, and both parties agree, that such operations can be conducted safely. A dumpsite foreman will be assigned to each operation, and when required by the Client, a night foreman will be assigned.

Grinding Operations

Grinding or chipping will be performed on all vegetative debris not reduced by burning. This method is preferred for reducing vegetative debris to conserve environmental resources through recycling and salvaging wood chips. Although environmentally preferred, it is more time-consuming and costly due to materials handling, hauling, and disposal costs.

Based on local circumstances, grinding or chipping C&D materials may be discouraged within numerous jurisdictions. Such operations will be performed on the type of debris (vegetative or C&D) as directed by the Client. For vegetative debris, these operations will be performed as described below:

- ✔ Vegetative debris will be placed into two separate piles and handled, as previously discussed.
- ✔ All personnel involved in vegetative debris grinding or chipping operations will receive a safety briefing for all affected job functions. A track-type tractor with the blade or a rubber tire loader will pick up and stockpile chips for temporary storage. Chips will be loaded out and hauled to a final disposal site as quickly as possible to reduce the threat of a fiery conflagration. All appropriate fire protection measures will be established and maintained following the Site Management Plan, the Site Safety Plan, and the Client requirements.

Burning Operations

Air curtain burning is the Grubbs team's preferred method for debris reduction. It will be performed on vegetative debris and clean woody debris unless otherwise directed by the Client. Under no circumstances will air curtain burning be conducted on C&D debris known, considered, or suspected to contain environmental or health hazards. All personnel involved in air curtain burning operations will receive safety training about these hazards to ensure compliance with the Accident Prevention Plan.

Air curtain burning will be conducted below ground level, in compliance with the Client's specifications. The pit will be at least eight feet deep, but no more than 20 feet, and will be no wider than 1.1 times the air curtain nozzle's width and no longer than 10–12 feet (15 feet maximum). No air curtain burning will be conducted within 1,000 feet of a structure or 100 feet of the debris pile. An area of not less than 100 feet surrounding each burn site will be cleared of all combustible materials and marked to delineate the area as restricted. All burning will be performed in accordance with the required permits.

Ash Disposal Area

At the end of each burning cycle, ash residue will be removed from the burning area and placed in a pre-identified ash disposal area for temporary storage before final disposal. The ash residue will be tested following the soil testing procedures in the team's EPP to determine the need for a groundwater protection barrier. If required, a clay or limestone liner will be used to protect the aquifer from potential contamination. This liner will be replaced if disturbed or removed by equipment operations.

Dust control measures for ash handling and storage will follow the requirements of applicable regulatory agencies once the ash residue reaches a quantity requiring disposal. Ash samples will be examined following the Client's plan and applicable regulatory agency requirements to establish disposal requirements (Class I Subtitle D Landfill vs. Class III Landfill vs. agricultural recycling techniques).

Debris Disposal

Debris disposal is the pre-planned, pre-approved operation of placing debris in its final resting place. Debris disposal operations can be segmented into three distinct operations: haul to the debris disposal site, physical operation of the debris disposal site, and operation of the debris disposal site.

Disposal Sites

A disposal site may be a dump and a landfill owned and operated by a private or public sector. Non-burnable debris will be disposed of only at a dump or landfill designated to receive materials other than toxic, hazardous waste.

Operations

All field supervisors will ensure that debris disposal hauling operators are licensed or certified to operate the required equipment. All debris disposal operators will receive area maps with client-approved, designated assignment/authorized areas of operation and transport routes.

All debris disposal haul operators will display colored signs provided by the Grubbs team and, if applicable, the Client. Grubbs' magnetic signs will be placed on the driver and passenger doors of the vehicle cab. Any Client-provided signs will be displayed on both sides of the forward-most section of the vehicle bed unless otherwise directed. All signs will be removed from the vehicle's exterior at the close of each business day and secured by the driver to prevent theft or loss. Signs will be replaced on the vehicle at the beginning of the next workday.

Colored paper signs/passes will be displayed in the driver's side windshield of each vehicle. The sign/pass color is subject to change without notice to ensure quality control regarding authorization to exit worksites and enter disposal sites.

Closure Procedures

Pre-use inspection and documentation information will be used as a guide, restoring each site to pre-use condition.

Removal of Debris

Any remaining debris residue not transported to the appropriate disposal site during site closure procedures will be collected, recorded, and hauled to the appropriate disposal site.

Removal of Temporary Structures

All temporary structures, such as fencing, inspection towers, temporary offices, sanitary facilities, etc., will be removed from each site.

Landscape Operations

Each site will be graded to return the topography to pre-use elevations unless otherwise directed by the Client. Each site will be restored to its pre-use vegetative condition by seeding, fertilizing, laying straw, and replacing agreed-upon shrubs and trees.

Final Debris Documentation and Contract Close-Out

The Contractor will coordinate the following closeout requirements with the applicant's staff: coordinating with local and state officials responsible for construction, real estate, contracting, project management, and legal counsel to determine requirements and support for implementing a site remediation plan; and establishing an independent testing and monitoring program. The Contractor is responsible for the environmental restoration of both public and leased sites and for removing all debris for final disposal at landfills before closure.

Closeout requirements also include:

- Reference appropriate and applicable environmental regulations.
- Prioritize site closures.
- Schedule closeout activities.
- Determine separate protocols for ash, soil, and water testing.

- Develop decision criteria for certifying satisfactory closure based on limited baseline information.
- Develop administrative procedures and contractual arrangements for the closure phase.
- Inform local and state environmental agencies regarding the acceptability of the program and established requirements.
- Designate approving authority to review and evaluate Contractor closure activities and progress.
- Retain staff during the closure phase to develop site-specific remediation for sites, as needed, based on information obtained from the closure.

TAB 5

PREVIOUS EXPERIENCE

5.1 PROJECT PROFILES

"Grubbs Emergency Services, LLC has excelled managing debris removal and recovery efforts following all types of disasters."

Throughout the southeastern U.S., our team of experts has employed state-of-the-art management techniques to remove and dispose of debris efficiently. Whether leading or working as part of a team, our focus has always been the rapid restoration of a site after a natural disaster.

Many of the projects that are included in this section presented significant challenges for the affected areas. Our experienced project managers and vast resources enabled our response to effectively support and, in many cases, expedite the debris and recovery process.

The work efforts depict a detailed history of our team's project experience. Our client list and response dates highlight our years of experience overseeing the challenges of major national disasters, often managing multiple projects simultaneously within the past five years.

Project: Hurricane Helene (September 2024)

Cedar Key, FL, FDOT Lafayette County, FDOT Suwannee County, FDOT Hamilton County, all county roads.

Hurricane Helene, characterized by rapid intensification, made landfall in Florida's Big Bend region on September 26, 2024. This major storm reached Category 4 status shortly before coming ashore southeast of Tallahassee, generating sustained winds of approximately 140 mph. Coastal areas experienced significant storm surge, with reports of a 15-foot surge severely impacting communities like Keaton Beach and Steinhatchee. The force of Hurricane Helene created additional obstacles to recovery efforts in a region still grappling with the aftermath of Hurricane Debby.

Grubbs Emergency Services, LLC, a Tier 1 contractor, continued its work in these locations, providing Disaster Debris Removal & Management Services. GES, as a Tier 1 contractor, removed a combined total of 1,981,805 cubic yards of debris from the affected areas. The storm's impact was widespread, resulting in extensive damage to infrastructure and property. Right-of-ways were particularly affected, with a significant accumulation of downed trees and vegetative debris, creating hazardous conditions and impeding access for emergency services and residents. Grubbs Emergency Services prioritized the removal of this debris to restore safe passage and facilitate the recovery process. GES focused on supporting the recovery of these communities, with a combined population of approximately 161,000, by managing substantial debris removal operations amidst the ongoing challenges.

By effectively managing the immense task of debris removal, Grubbs Emergency Services enabled these communities to overcome the combined challenges of Hurricanes Debby and Helene and resume their path to recovery.

Project: Hurricane Debby (August 2024)

Cedar Key, FL, FDOT Lafayette County, FDOT Suwannee County, FDOT Hamilton County, and FDOT Madison County, all county roads.

Hurricane Debby made landfall near Steinhatchee, Florida, as a Category 1 hurricane on August 5, 2024, bringing widespread power outages and significant freshwater flooding across the Suwannee River Basin. An estimated 3 to 5 feet of storm surge impacted the southeast Big Bend and Florida Nature Coast, affecting communities from Steinhatchee to Cedar Key.

Grubbs Emergency Services, LLC, a Tier 1 contractor, was activated across multiple areas, including the city of Cedar Key, and Lafayette, Suwannee, Hamilton, and Madison Counties, in response to the hurricane's impacts. GES provided Disaster Debris Removal & Management Services under contract with FDOT, removing a combined total of 200,358 cubic yards of debris from the affected areas. Roadways were significantly obstructed by downed trees and vegetative debris, creating challenges for emergency services and hindering access for residents. Grubbs Emergency Services focused on clearing this debris to restore safe passage and support the recovery efforts of local residents and businesses. GES focused on supporting the recovery of these communities, with a combined population of approximately 86,000, by managing substantial debris removal operations in the face of widespread flooding and storm surge.

Grubbs Emergency Services' diligent efforts in clearing debris and restoring access were instrumental in helping these communities regain a sense of order and begin the process of recovery.

Project: Hurricane Idalia (August 2023)

Cedar Key, FL, Yankeetown, FL, Lafayette County, FL BOCC, FDOT Lafayette County, FDOT I-10 Suwannee County, FL, FDOT I-75 and All State Roads in Hamilton and Suwannee Counties.

Hurricane Idalia made landfall in Keaton Beach, Florida, as a Category 3 hurricane on August 30, 2023. Cedar Key, Florida, experienced record-high water levels of 6.8 feet, accompanied by a storm surge of 8.9 feet. Tornadoes and high winds impacted the Big Bend area. Hurricane Idalia was the most powerful hurricane to strike the Big Bend region since Hurricane Easy in 1950, resulting in an estimated $3.5 billion in damages.

Grubbs Emergency Services, LLC, was immediately activated by Cedar Key, Yankeetown, and the Lafayette County Board of County Commissioners (BOCC) following the storm's passage. Governor Ron DeSantis initiated a state management and reimbursement program to assist communities lacking the financial resources for recovery. Under this program, the Florida Department of Transportation (FDOT) assumed responsibility for managing and executing cleanup operations.

As the prime contractor for the Lafayette County BOCC, GES was able to continue its operations when the FDOT took over responsibility for cleanup efforts in Lafayette County. Having been engaged in recovery efforts within hours of the storm's impact, Grubbs Emergency Services, LLC, removed over 890,000 cubic yards of vegetative debris for Lafayette

County and the FDOT.

Furthermore, Grubbs Emergency Services, LLC, served as the Tier 1 subcontractor for cleanup operations in Hamilton and Suwannee Counties, Florida. In these counties, GES removed a combined total of over 591,000 cubic yards of vegetative debris. Grubbs Emergency Services, LLC, is pleased to report that, leveraging its extensive resources, it was among the first contractors to respond and the first to successfully complete cleanup and restoration efforts to the full satisfaction of all parties involved.

Project: Hurricane Ian (September 2022)

Osceola County BOCC, Waste Management Okeechobee Landfill, Waste Management of Fort Myers Driver's Center, Town of Fort Myers Beach, FL

Hurricane Ian made landfall in Lee County, FL, as a Category 5 hurricane with sustained wind speeds of 160 mph. The storm caused catastrophic damage not only in Florida but also in North Carolina and Virginia, resulting in $113 billion in damages. A 10- to 15-foot storm surge along the coast of Lee County, FL, including Fort Myers, Fort Myers Beach, Cape Coral, Naples, and Sanibel Island, caused the majority of the devastation.

As Ian traversed Florida, Okeechobee and Osceola Counties were also affected. Grubbs Emergency Services, LLC, was prepared and immediately activated by Osceola County following the storm. With a pre-established plan and expert personnel, they executed debris removal safely and efficiently. They removed 58,000 cubic yards of debris from Osceola County, and 185,287.61 cubic yards of vegetation were reduced through burning in Okeechobee.

In Lee County, the area most severely impacted by Ian, an order was issued to reopen a closed and sealed landfill in Fort Myers. To facilitate this, Grubbs removed and cleaned 305,120 cubic yards of dirt as a top layer to expose the underlying refuse. GES LLC provided essential resources, including workforce, equipment, knowledge, and experience, enabling Waste Management Inc. of Florida to successfully complete the project.

Due to the significant impact of the storm surge on the Fort Myers Beach shoreline, Grubbs undertook the delivery and construction of an emergency berm. GES, LLC, deployed on-site personnel with all necessary capabilities. They also engaged a local subcontractor to ensure adherence to specifications, resulting in a project that met the satisfaction of the town and its residents. Grubbs transported approximately 150,000 tons of sand from inland to the beach and constructed an emergency berm spanning over five miles.

The projects listed below were completed to exacting standards and in accordance with FEMA guidelines to ensure both FEMA reimbursement and client satisfaction.

Osceola County BOCC	Danny Schaeffer	1 Courthouse SQ., Kissimmee, FL 34741	(407) 742-7752
Waste Management Inc, FL Okeechobee Landfill	Joe Gagne	10800 NE 128th Ave. Okeechobee, FL 49472	(954) 658-6156
Waste Management of Florida – Fort Myers Driver's Center	David Phillips	11990 FL-82 Fort Myers, FL 33913	(239) 287-0305
Town of Fort Myers Beach	Chadd Chutz	2525 Estero Blvd. Fort Myers Beach, FL. 33931	(237) 287-0536

Project: Hurricane Michael (October 2018)

City of Blountstown, FL
20591 Central Ave W Blountstown, FL 32424
Traci Hall City Manager (850) 674-5489 thall@blountstown.org

On October 10, 2018, Hurricane Michael made landfall in the Florida Panhandle as a Category 5 hurricane, with sustained winds of 160 mph, causing widespread devastation. Blountstown, a self-sufficient town of 3.2 square miles with a population of nearly 3,000, was severely impacted. The storm left the town in a state of ruin, with downed power lines and utility poles, widespread roof damage and structural collapse, and roadways obstructed by trees and debris. Notably, ancient pine trees, some over 200 years old, were mangled and destroyed.

Grubbs Emergency Services mobilized crews and deployed them immediately following the storm's departure to expedite community restoration. Due to the extensive destruction, Grubbs volunteered three days of service to clear roadways and power lines. At this time, no monitoring company was involved.

Grubbs Emergency Services cleared roadways and power lines, removed debris from canals and lakes, extracted stumps, demolished residential and commercial structures, and addressed hazardous hanging and leaning trees. This project, which exceeded $5 million in billed services, was completed within 180 days.

Project: Hurricane Irma (September 2017)

On September 10th, 2017, Hurricane Irma made landfall in Monroe County, Florida, as a Category 4 hurricane, causing significant damage throughout the state. Grubbs Emergency Services, LLC, responded to the needs of numerous municipalities, primarily in South Florida, with the Florida Keys experiencing the most severe impact. Grubbs was activated and immediately commenced cleanup and restoration operations to expedite the return to normalcy for affected areas and residents.

Each municipality was assigned a dedicated project manager who maintained consistent communication with the client. Crews were deployed promptly upon issuance of the notice to proceed. The scope of work encompassed clearing roadways to ensure safe passage for emergency vehicles; loading and hauling all eligible vegetative and construction and demolition debris to appropriate disposal sites; removing white goods and hazardous waste; restoring beaches; addressing hazardous trees and limbs; and managing and restoring disposal sites. All operations adhered to FEMA guidelines to ensure reimbursement of costs for the municipalities.

Project: Hurricane Matthew (October 2016)

Seminole County & The City of Neptune Beach

On October 7th, 2016, Hurricane Matthew barreled along Florida's eastern coast, generating significant damage and widespread flooding due to storm surge, despite not making landfall.

Grubbs Emergency Services, LLC, commenced debris cleanup operations in the City of Neptune Beach on October 8th, 2016. Working in close collaboration with city staff, Grubbs ensured that all requirements were met for full FEMA reimbursement. This project was completed on October 25th, 2016.

Seminole County, after encountering challenges with independent cleanup efforts, engaged Grubbs Emergency Services to complete the task. Grubbs mobilized to the site on October 17th, 2016, and concluded operations on November 13th, 2016.

Project: Hurricane Hermine (September 2016)

Hurricane Hermine, the first hurricane to make landfall in Florida since Hurricane Wilma in 2005, developed in the Florida Straits on August 28th, 2016, from a long-tracked tropical wave. On September 2nd, 2016, Hermine made landfall just east of St. Marks, Florida, at peak intensity. The storm toppled trees and utility lines, causing widespread power outages affecting tens of thousands of residents, and tragically resulted in at least one fatality. Hermine's dangerous storm surge and rising tides led to coastal flooding, rendering some roads impassable in multiple counties.

Grubbs Emergency Services was activated in Cedar Key, the Town of Yankeetown, and Hernando County, commencing operations on September 6th, 2016. All three projects were completed within one month. Each project involved debris hauling and the removal of hazardous trees and limbs.

In Hernando County, debris was directly hauled to the final disposal site. The Town of Yankeetown and Cedar Key projects included site management, debris reduction and burning, and restoration of the temporary disposal sites. C&D debris in Cedar Key and Yankeetown was directly hauled to the final disposal site in Levy County.

ICE STORM CLEANUP

Ballard and Hart Counties, Kentucky (Kentucky Transportation Cabinet)
Projects: Cutting, Loading and Hauling of Ice Storm Debris from the KYTC Rights of Way (Feb 2009)
Contact Information: Hart County-Todd Lawler KYTC Superintendent II (270) 524-4421
Ballard County-Kyle Poat KYTC Superintendent II (270) 444-0087

Services Provided:

Grubbs Emergency Services was contracted as a subcontractor to oversee debris operations in Hart County and support those in Ballard County. In Hart County, responsibilities included field operations management and oversight, subcontractor mobilization and payment, scheduling, and liaison services between KYTC and the prime contractor.

Ballard County operations similarly focused on field operations and services, such as the removal of leaning trees, dangerous hanging limbs, and stumps.

Following removal, debris was placed curbside for collection and transport to the TDSRS. Operations were challenged by treacherous conditions in the aftermath of the intense ice storm. Staff contended with inclement weather, rough terrain, and mountainous roadways while hauling debris to the disposal sites.

An unexpected issue was the limited capacity of KYTC-operated temporary dumpsites, which proved insufficient for managing the volume of storm-generated debris. Consequently, Grubbs Emergency Services was tasked with identifying and assisting in the procurement of additional disposal sites. Furthermore, KYTC's monitoring of debris operations with

force account labor hindered efficient scaling of operations and the ability to sustain necessary production rates for timely project completion.

GES promptly addressed each operational challenge with KYTC representatives, developing effective plans and strategies to meet project timelines. In Hart County, over 200,000 cubic yards of debris were removed in less than 30 days. In Ballard County, GES played a key role in the removal of over 300,000 cubic yards. Both projects were completed to the satisfaction of the prime contractor and the applicant.

CATASTROPHIC EVENT DEBRIS REMOVAL

City of Houston, City of Galveston, City of Baytown, Taylor Lake Village, Piney Point Village, Town of El Lago and Village of Nassau Bay, Texas

Projects: Hurricane Ike (2008)
Contact Information: Brian Thomason, Senior V.P. Operations, Grubbs Emergency Services, LLC.

Services Provided

In September 2008, GES was activated to assist with recovery efforts following Hurricane Ike, the most intense hurricane to impact the U.S. coastline since Katrina. Initial operations commenced in the City of Houston, where GES staff were contracted to clear debris from one-quarter of the city limits. Working in the southeastern section, crews processed over 1,000,000 cubic yards of vegetative and C&D debris.

In less than 7 days, GES mobilized over 300 pickup crews and certified over 1,000 haul units. This rapid mobilization capability led to additional contracts for assistance in the City of Baytown and the City of Galveston, the most devastated area. Despite receiving deployment notification late in the workday, GES dispatched fifteen 3- to 5-person crews to Baytown and twenty 3- to 5-person crews to Galveston by 5:00 AM the following morning. Working through the night, the management team recruited available pre-qualified GES subcontractors, exceeding the client's request by deploying over 50 crew members to these areas.

With operations running smoothly, additional requests for assistance were received. Similar to the Galveston and Baytown deployments, GES received an early morning notification for crews in the Village of Piney Point. Within 3 hours, crews were mobilized and operations began.

Mobilization would have been faster, however, Houston traffic and the distance to Piney Point from existing worksites presented challenges. GES was subsequently awarded contracts for Taylor Lake Village, the Village of El Lago, and the Village of Nassau Bay.

Responsibilities in these project areas focused on debris pickup and hauling from the curbside to TDSRS (staging sites were managed by other resources). Most debris consisted of vegetative matter, except in Taylor Lake, Nassau Bay, El Lago, and Galveston, where C&D debris was predominant. C&D debris required direct hauling to appropriate landfills, a task complicated by haul distances and persistent traffic within Houston. Nevertheless, operations were completed on time and to the satisfaction of all clients.

GES was also tasked with removing leaning/dangerous trees and hanging/dangerous limbs in its assigned section of Houston and El Lago. Within 48 hours of receiving the verbal Notice to Proceed, GES mobilized over 120 bucket truck crews. Over 20,000 trees were cleared by trimming limbs and/or removing entire trees, with debris placed curbside for subsequent collection. This work was also completed on schedule and to the client's satisfaction.

All operations were completed within a 90-day timeframe or less. GES collaborated with all clients to conduct additional debris removal passes as needed to meet the needs of their citizens.

TORNADO CLEANUP AND RESTORATION

Town of Lady Lake, Florida
Projects Tornado Cleanup and Debris Management (Feb 2007)
Contact Information: Bill Vance, Town Manager (352) 751-1500

Services Provided

Leveraging a pre-event contract, Grubbs Emergency Services, LLC, responded within hours of the February 1st, 2007, tornado touchdown to assist emergency management and public works staff with damage assessment and initiate cleanup and restoration activities. The disaster tragically resulted in 20 fatalities and caused widespread destruction and damage to hundreds of homes across a four-county area, prompting a federal disaster declaration by FEMA.

GES received the activation call at 4:00 AM and was fully mobilized, staffed, and operational by 8:30 AM. GES was also selected to conduct debris reduction operations through burning. The entire operation was completed within the 30-day schedule.

PUSH AND HAUL OPERATIONS, TDSRS MANAGEMENT

Village of Islamorada
Projects: Hurricanes Dennis, Katrina, Rita, and Wilma (2005)
Contact Information: Zully Hemeyer, Assistant Public Works Director (305) 852-6933

Services Provided

The 2005 Atlantic hurricane season was the most active Atlantic hurricane season in recorded history, repeatedly shattering previous records.

The GES team initiated "Push" operations within 24 hours of the storms moving over the
Keys. In addition to the initial clearing effort, GES operated TDSRS at Islamorada Preserve and Windley Key. Due to sheer physical limitations, neither site was adequate to manage the amount of material generated during the storm.

To ease the burden associated with the management of massive quantities of debris (confined to a small geographic area), GES conducted round-the-clock operations, resolved resident complaints, and supported FDOT operations, all of which facilitated recovery. Once again, mulch operations were a significant component of the restoration process and required frequent truck hauls to transport debris off the island.

Furthermore, GES removed massive quantities of seaweed and transported the debris off-site, including 1,725 tons (Wilma), 1,983 tons (Rita), 1,396 tons (Katrina), and 1,913 tons (Dennis).

DEBRIS REMOVAL, SAND SCREENING, FEMA PUBLIC ASSISTANCE PROGRAM SUPPORT

City of Key West, Florida
Projects: Hurricanes Ernesto (2006); Dennis, Katrina, and Wilma (2005); Charley, Frances, Jeanne, Ivan (2004); Irene (1999); Georges (1998)
Contact Information: Julio Avael, City Manager (305) 292-8100; Fax: (305) 292-8234

Services Provided

Grubbs Emergency Services, LLC responded to Hurricane Georges, a Category 2 storm that created widespread damage throughout The City of Key West. Within 24 hours, GES mobilized privately owned aircraft (at no cost to the city) to conduct a damage assessment and estimate debris quantities. Most of the debris generated following the event was vegetative, with some C&D debris present, due to localized flooding. Quantification of debris was necessary to provide Monroe County and the Florida Division of Emergency Management with initial damage estimates as well as to lend guidance to the city regarding debris management techniques and opportunities.

Estimates were derived using the following methodology:

1) Aerial surveys
2) Windshield surveys
3) Miles of city streets
4) Density of cover prior to the event
5) Population (number of homes)
6) Number of homes that qualify for right-of-entry debris removal operations.
7) Number of debris normally overseen by the City of Key West on an annual basis.
8) Potential for sand screening

In addition to push and haul activities, GES and The City of Key West collaborated closely with the Florida Department of Environmental Protection and FEMA to develop a proposal for beach debris removal. This plan encompassed the removal of debris-laden sand, transport of the sand to a screening area at a city-approved TDSRS, debris removal screening, transport of clean sand back to the beach, and disposal of the screened debris (9,353 tons). This operation was deemed eligible under FEMA's Public Assistance program, with The City of Key West achieving a 97% reimbursement rate within 90 days of the event. Seaweed removal was also significant, with 2,243 tons removed due to Hurricane Rita and 4,332 tons from Hurricane Dennis.

CANAL CLEANUP AND RESTORATION

City of Margate, Florida
Projects: Hurricane Katrina and Wilma Aftermath Canal Cleanup Project (2005-2006)
Contact Information: Roy Brenner; Director, Public Works (954) 972-6454

Services Provided

The City of Margate commissioned GES to conduct a canal debris cleanup and restoration project following damage caused by Hurricanes Katrina and Wilma. The project encompassed the cleanup of approximately 30 miles of canals, waterways, and banks littered with trees and vegetative debris. GES mobilized resources within hours of the storms' passing, swiftly addressing hazards associated with downed debris and minimizing threats to public property. Lightweight barges with knuckle-booms and other waterborne equipment were utilized for the large-scale restoration efforts.

This project presented several challenges, particularly with cost tracking requirements for Natural Resource Conservation Service (NRCS) and FEMA funding prerequisites. GES's first task was to alert the client to FEMA funding options and address conflicting administrative issues across multiple governmental districts. Additional challenges included obtaining right-of-entry clearance from 80 private property owners before initiating canal bank cleanup and restoration.

RED TIDE CLEANUP

Town of Longboat Key, Florida
Project: Red Tide Cleanup (2004, 2005, 2006-2008)
Contact Information: Juan Florensa Director PWD (941) 316-1988

Services Provided

Grubbs Emergency Services, LLC, working with the Town of Longboat Key, aggressively acted to clear canals and island waterways of fish stricken by multiple events of red tide between the years 2004-2006. The response effort required an immediate staff and equipment mobilization to help minimize respiratory irritation among beachgoers, homeowners, and boaters. Within hours GES mobilized a cleanup crew to harvest the dead fish and other marine life. Two harvesters were deployed on the bayside areas of Harbourside Moorings, Country Club Shores, and down into New Pass. Working with the Public Works department, GES transported 165 tons of fish and marine vegetation to the county landfill.

ICE STORM RESPONSE

Arkansas Department of Highway & Transportation, (2001)
Contact Information: Rex Spurlock, Staff Maintenance
Engineer (501) 569-2000

Services Provided

GES responded to the AHTD call for disaster assistance following the 2001 Arkansas ice storm. The event, which blanketed the state with ice, left downed trees and limbs across the state and threatened public safety.

The storm required an immediate response. GES staff and heavy equipment were mobilized within hours along with a local complement of subcontractors/laborers. GES was awarded the bid for two out of the three potential districts, covering approximately 12,000 miles of AHTD rights-of-way. FHWA was the sole funding source for the operation, and all FHWA-ER requirements were successfully implemented. The AHTD, unfamiliar with storms of this magnitude, commended GES's experience addressing the post-storm cleanup. Debris operations included tree trimming, debris consolidation at the right-of-way, pickup and haul, transportation to the temporary debris storage and reduction sites (TDSRS), reduction through open burning, and land application of residual ash.

GES was tasked as a requirement of the contract to select the TDSRS. Many of the 200 plus sites utilized were through lease agreements with private property owners. As with all post-storm events, strict regulatory requirements were implemented. GES staff worked extensively with the Arkansas Department of Environmental Quality (ADEQ) on notification, setbacks, and storage requirements. Notifications were made daily throughout the site selection and final closeout process. Land application of the ash met the department's criteria because the debris consisted of green vegetative material.

At its peak, the removal project consisted of over 300 crews moving approximately 200,000 cubic yards of debris per day during peak operations. The project yielded over five million cubic yards with the operation completed in less than 120 days.

Notably, AHTD did not possess the rigorous documentation requirements to support their claims for reimbursement. Grubbs Emergency Services, LLC, through its data management system, provided the necessary tickets, truck certifications, invoices, daily reports, and project closeout documents to facilitate AHTD obtaining full reimbursement for this operation.

HURRICANE DEBRIS REMOVAL

City of Greenville, Martin County, Town of Williamston, Town of Aulander, Town of Robersonville and the City of Murfreesboro, N.C. (1999) Hurricane Floyd
Contact Information: Don Christopher, Administrator (Williamston) (252) 792-5142
William Pless, Town Administrator, Murfreesboro (252) 398-5904

Services Provided

Hurricane Floyd triggered the third-largest evacuation in U.S. history (behind Hurricane Gustav and Hurricane Rita, respectively), with 2.6 million coastal residents from five states evacuating their homes. Floyd struck the Bahamas at peak strength, causing heavy damage. It then paralleled the East Coast of the United States, causing massive evacuations and costly preparations from Florida through the Mid-Atlantic region. The storm weakened significantly before making landfall in North Carolina as a Category 2 hurricane.

Responding to this event in North Carolina, GES staff faced unique challenges due to the incredible rainfall and flooding. Access to impacted areas was severely hampered, with most areas inaccessible except by boat or helicopter. GES deployed its corporate helicopter to assist the Advanced Management team in accessing these areas. Senior Vice President of Operations, Brian Thomason, a former Deputy Director of Emergency Management in Cumberland County,

N.C., leveraged his relationships with Emergency Management Directors to collaborate on initial damage assessments. Notably, many impacted communities were not under contract; however, this service was provided as a courtesy due to GES's established relationships within the Emergency Management community.

GES eventually contracted with the Cities of Greenville and Murfreesboro, Martin County, and the Towns of Williamston, Aulander, and Robersonville for debris pickup, hauling, and reduction through grinding, as well as mulch disposal. One specialized service provided was the disposal of animal carcasses. The immense flooding significantly impacted the North Carolina poultry, pork, and beef industries due to livestock losses. GES was responsible for the pickup, hauling, and burning of carcasses throughout the contracted areas. These projects, with the unique challenges presented by Hurricane Floyd, were completed on schedule and to the clients' satisfaction.

TORNADO CLEANUP AND RESTORATION

Del City, Oklahoma; Grady County, Oklahoma, (1999)
Contact Information: Board of County Commissioners (405) 224-5211

Services Provided

Grubbs Emergency Services, LLC, responded to the aftermath of an F5 tornado, one of the most destructive events recorded along Tornado Alley. Based on the damage in Del City, Oklahoma, estimated winds were between 260 and 318 mph. Frame and block houses were ripped from foundations, carried considerable distances, and disintegrated; auto-sized missiles were airborne for several hundred feet or more; and trees were debarked.

Immediately following the event, GES conducted a damage assessment and provided the client with estimates for construction and demolition (C&D) debris removal. During the response, GES recognized that Del City was unaware of the funding eligibility for certain affected areas under the FEMA Public Assistance program. For example, hazardous waste abatement, a significant aspect of the City's recovery, required specific handling protocols.

Upon receiving the notice to proceed, mobilization was completed in less than 36 hours. By utilizing local resources and company-owned equipment, a swift mobilization was achieved. GES assisted Del City officials with documentation and reporting procedures necessary to support claims for reimbursement under the FEMA Public Assistance program. Funding requests included debris removal (Category A) and all other eligible categories (B-G).

ICE STORM CLEANUP AND RESTORATION

NC Department of Transportation, 2003, Ice Storm
Services performed included tree trimming and tree removal in Durham, Granville, and Person Counties.
Contact Information: M.A. Harris, Assistant District Engineer (919) 560-5854

Services Provided

Following a crippling ice storm that impacted the State Capitol Region of North Carolina, GES successfully assisted the North Carolina Department of Transportation (NCDOT) with rapid recovery efforts. Through a comprehensive bid process, GES secured contracts covering a three-county region (Durham, Granville, and Person Counties). NCDOT led statewide operations, with many municipalities requiring assistance on their DOT/FED aid roads.

Incorporated in the agreements for Public Assistance operations, NCDOT allowed GES to manage debris with the caveat that DOT/FED Aid roads were pre-identified, and debris operations were tracked, documented, and invoiced separately. GES's proprietary software enabled flawless execution of this task. In cases where roads were incorrectly identified by the municipality or later found to meet FHWA criteria, GES's documentation methodology supported the client's reimbursement claims.

Field operations primarily consisted of cutting, loading, and hauling tree debris that posed a threat to public health and safety. More specifically, these operations involved leaning tree removal, trimming hanging limbs, and stump removal. Notably, in cut, load, and haul operations, debris is not stacked curbside by citizens. This work is more tedious, as the contractor handles denser material, and each tree presents unique circumstances. The overall magnitude and operational complexities of this event created major hurdles for GES regarding project scheduling, production, and management. Nevertheless, GES completed all projects on time and satisfied all contractual obligations with NCDOT.

HURRICANE DEBRIS REMOVAL, BERM RECONSTRUCTION

North Topsail Beach and Surf City, NC, 1998 Hurricane Bonnie, 1996 Hurricanes Fran and Bertha

Services Provided

The Towns of North Topsail and Surf City were hit by three major hurricanes within a two-year period. During recovery efforts, these communities typically performed debris pickup from the curbside, reduction by grinding, and disposal of mulch material. Notably, the community had limited vegetative canopy. The debris encountered consisted primarily of construction and demolition (C&D) debris and sand from the 11-mile berm system along the coastline.

Hurricanes Fran and Bertha severely impacted over two-thirds of the structures in these communities, with many damaged beyond repair. GES collaborated closely with municipal governments, the North Carolina Emergency

Management Agency, and FEMA to facilitate the demolition of condemned structures. GES managed the physical demolition process and ensured compliance with the rigorous documentation requirements, including securing Right of Entry forms, Hold Harmless agreements, and non-duplication of Benefits forms.

The intense storm surge from Hurricanes Bertha, Fran, and Bonnie washed ashore sand from existing beaches and eliminated the protective berm system along the coastline. Emergency berm restoration was highly prioritized to re-establish the barrier protecting beachfront residences and infrastructure. The storm-tossed sand, laden with debris, required transport to a screener for removal of foreign objects. Once the sand was screened, it was transported back to the beach and placed according to specifications. Screened debris was transported to the appropriate disposal facility for final disposition.

After operations for Hurricane Bertha were completed, Hurricane Fran struck six weeks later, impacting the newly constructed berm system. GES's previous berm restoration efforts for Bertha mitigated property damage from Fran. However, the process had to be repeated after Fran's landfall and again two years later following Hurricane Bonnie. GES meticulously documented each process to support the applicant's claims for additional reimbursement.

5.3 REFERENCES

1. Municipality: City of Marathon

a. Name and location of the project: Request for Proposal Disaster Debris Removal & Management Services, City of Marathon, FL
b. Detailed description of the comparable project: Disaster debris removal and management services following Hurricane Irma, including right-of-way clearance, debris staging at temporary debris storage and reduction sites (TDSRS), and final disposal of vegetative debris and construction and demolition (C&D) debris. This project involved a rapid response and large-scale cleanup effort across the City of Marathon.
c. Nature of the firm's responsibility on the project: GES was the prime contractor responsible for all phases of the debris removal operation, including subcontractor management, site safety, documentation, and reporting to the City of Marathon and for FEMA reimbursement.
d. Project Contact: George Garrett, City Manager, 9805 Overseas Hwy., Marathon, FL 33050, (305) 395-1850, garrettg@ci.marathon.fl.us
e. Contract Project Commenced: September 2017
f. Population: 9,789
g. Cost of project: $11,014,190.56
h. Work for which staff was responsible: John G. Grubbs, Managing Member, oversaw all project operations and client communication.
i. Contract Type: Prime
j. Results/deliverables of the project: Debris removal was completed on schedule and within budget, with all work meeting FEMA eligibility requirements. No challenges occurred.

2. Municipality: City of Blountstown, FL

a. Name and location of the project: Emergency Debris & Hazardous Tree, Limb, and Stump Removal Operations, City of Blountstown, FL
b. Detailed description of the comparable project: Following Hurricane Irma, this project focused on right-of-way clearance, debris staging, and disposal of vegetative debris and construction and demolition (C&D) debris to restore access and public safety.

FINANCIAL CAPABILITY

6.1 FINANCIAL CAPABILITIES STATEMENT

Grubbs Emergency Services, LLC, acknowledges the financial information requirements outlined in this RFP and confirms the immediate availability of our most recent audited and reviewed financial statements for your review upon request. We are committed to providing transparent financial documentation to support our proposal.

We recognize the critical importance of financial stability when executing a project of this magnitude. Our most recent financial statements accurately reflect our sound fiscal management and demonstrate our capacity to efficiently manage the financial aspects of disaster debris removal and disposal services. To further demonstrate our financial strength, we have included a letter from our financial institution and a letter affirming our bonding capabilities. These financial documents, supported by the included letters, demonstrate our readiness to meet all financial obligations associated with this undertaking.

Grubbs Emergency Services, LLC, is confident that our comprehensive financial documentation will fully satisfy the due diligence requirements. We are dedicated to upholding responsible financial practices and ensuring the successful completion of this project, consistently delivering exceptional services with unwavering financial integrity.

RE: Grubbs Emergency Services, LLC
Status of Bondability

To Whom It May Concern:

Sterling Seacrest Pritchard is proud to represent Grubbs Emergency Services, LLC. We consider them to be a premier contractor in their field and we do not hesitate to recommend them for your project needs.

Arch Insurance Company has a A.M. Best rating of "A+, XV" and provides a bonding program to Grubbs Emergency Services, LLC with single bond limits up to $20,000,000 and an aggregate program of $30,000,000. These limits are not to be construed as maximums but are established to handle the daily needs of our client.

As always, Arch Insurance Company reserves the right to perform standard underwriting at the time of any bond request. This includes, but will not be limited to, the acceptability of the contract documents, bond forms and project financing. We assume no liability for any reason if we do not execute the bonds as requested. This letter is not an assumption of liability, nor should it be considered a bid, payment, or performance bond. If you should have any questions, please do not hesitate to contact us.

Sincerely,

Sterling Seacrest Pritchard

James C. Congelio

SouthState

RE: Grubbs Emergency Services LLC

To Whom It May Concern:

The above-mentioned client has maintained a relationship with SouthState Bank since November of 2017. Since that time, they have maintained their accounts in a satisfactory manner and the average balance is typically in the low 7 figure range. The Bank also has a collateralized loan to the company, which has availability in the low 7 figure range with a current balance in the low 6 figure range.

If you need anything further, please advise.

Thank you.

Sincerely,

James A. Ray, SVP
Area Executive Pinellas County

Grubbs Emergency Services, LLC, a Florida-based debris management company, has been a trusted partner in disaster recovery for 30 years. Established in 1993 as a division of Grubbs Construction Company, the importance of our disaster recovery services led to the formation of Grubbs Emergency Services, Inc. as a separate entity in October 2000.

Through the years, Grubbs Emergency Services has evolved to best serve the needs of our clients. In 2003, we became Grubbs Emergency Services, LLC of Nevada/Wyoming, and in July 2012, we restructured as a Florida Limited Liability Company operating as a partnership. Today, Grubbs Emergency Services, LLC focuses exclusively on securing disaster debris removal and management contracts within the State of Florida.

With a bonding capacity of up to $30,000,000.00, Grubbs Emergency Services possesses the financial strength to handle large-scale projects. Our dedicated team comprises over 30 full-time staff, approximately 50 seasonal project managers (deployed as needed), and a vast network of subcontractors and day laborers across the United States. We maintain substantial working capital and lines of credit to ensure we can meet the financial demands of any recovery effort. Our strong bonding capabilities further demonstrate our commitment to fulfilling all client obligations.

DEBRIS REMOVAL (EMERGENCY)

Unless notified otherwise, this Certificate of Qualification will expire **6/30/2026.**

In accordance with Section 337.14(1), Florida Statutes, an application for qualification must be filed within (4) months of the ending date of the applicant's audited annual financial statements.

If the company's maximum capacity has been revised, it may be accessed by logging into the Contractor Prequalification Application System via the following link:
HTTPS://fdotwp1.dot.state.fl.us/ContractorPreQualification

Once logged in, select "View" for the most recently approved application, and then click the "Manage" and "Application Summary" tabs.

The company may apply for a Revised Certificate of Qualification at any time prior to the expiration date of this certificate according to Section 14-22.0041(3), Florida Administrative Code (F.A.C.), by accessing the most recently approved application as shown above and choosing "Update" instead of "View." If certification in additional classes of work is desired, documentation is needed to show that the company has performed such work.

All prequalified contractors are required by Section 14-22.006(3), F.A.C., to certify their work underway monthly in order to adjust maximum bidding capacity to available bidding capacity. You can find the link to this report at the website shown above.

Sincerely,

James E. Taylor II

James E. Taylor II, Prequalification Supervisor

The Price Proposal Form for RFP # 25-05-PW is attached as EXHIBIT "A".

All Proposers **must fill out the Price Proposal Form** (EXHIBIT "A") and submit the completed and signed form with the Proposal.

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

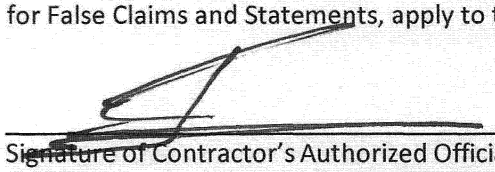
APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, Grubbs Emergency Services, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.



Signature of Contractor's Authorized Official — Date: 04/21/2025

John G. Grubbs, Managing Member

Name and Title of Contractor's Authorized Official

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. RFP-25-05-PW

   for Disaster Debris Management Services.

2. This sworn statement is submitted by Grubbs Emergency Services, LLC
   [name of entity submitting sworn statement]

   whose business address is 13365 W. Hillsborough Ave Tampa, FL 33635
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 32-0383464

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is John G. Grubbs and my relationship to
   [please print name of individual signing]

   the entity named above is Managing Member.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

✓ Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

____ There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

__The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

Final Haul-Out

Experienced Management

LGS has more than 200 full-time employees that are managed by several dozen professionals. These professions include degrees in Business and Finance, Occupational Safety, Biology, Emergency and Disaster Management, Construction Management, Civil Engineering, Construction Engineering, Marketing, and Accounting. Members of management are also FEMA trained, NIMS trained, and OSHA Safety training. LGS has a wide array of experience in different geographical areas ranging from Maryland to Kansas and Texas to Florida, and even Puerto Rico.

One of the core strengths of LGS' management is its ability to adapt. One occasion in particular was when a client in Mississippi did not have the local resources to operate its own landfill. LGS managed to hire a local subcontractor to provide oversight services and LGS self-performed the landfill operations. This accomplished multiple things that the client was ecstatic over: landfill operations were unimpeded, local minority subcontractor participation was utilized, and LGS brought a more positive economic impact to the client than was anticipated.

LGS also has a strong commitment to safety. LGS has one of the lowest EMR ratings in its industry and prides itself on maintaining an exceptional safety record. LGS management instills a "Brother's Keeper" mentality in its approach to safety.

Rapid Mobilization

With experience comes knowledge, and this has allowed LGS to evolve its deployment process. By streamlining and pre-planning, LGS can mobilize teams and equipment to predetermined staging areas until the storm passes. Post-storm, these teams can quickly begin assessing the damage and working closely with the client to put together a work plan. LGS can provide significant resources, equipment, and staff within 24 hours of a storm passing. For purposes of this RFP, LGS would deploy equipment and resources from its main office in Columbia.

Commitment

Looks Great Services of MS, Inc. is fully committed to serving the City of Destin with the highest level of professionalism, responsiveness, and dedication throughout the Disaster Debris Management Services Project. We understand the critical importance of rapid, safe, and efficient debris removal in the aftermath of a disaster to protect public safety, restore access, and support community recovery efforts. Our team pledges to work closely with city officials, emergency management personnel, and all stakeholders to ensure seamless coordination, clear communication, and full compliance with FEMA and regulatory requirements. We are committed to maintaining the highest standards of safety, quality, and environmental responsibility in every aspect of our work. Above all, Looks Great Services is dedicated to being a reliable, proactive partner the City of Destin can depend on to deliver results that exceed expectations and contribute to the city's swift and successful recovery.

Summary of Capabilities

Looks Great Services of MS, Inc. offers a comprehensive suite of disaster recovery and debris management services tailored to meet the full spectrum of the City of Destin's emergency response and recovery needs. Our capabilities include pre-disaster management and planning to ensure operational readiness and compliance; FEMA Public Assistance Program guidance to support maximum reimbursement and regulatory compliance; and rapid mobilization for 72-hour emergency road clearance to restore critical access routes. We are equipped to perform vegetative debris removal and construction & demolition (C&D) debris removal from both the right-of-way (ROW) and private property under right-of-entry (ROE) programs, along with complete Temporary Debris Management Site (TDMS) setup, management, and operations. Our services also encompass final debris disposal, hazardous tree removal (leaners), hazardous tree trimming (hangers), stump removals, structural demolition, sand screening and beach restoration, canal and waterway debris removal, vehicle and watercraft removal, white goods disposal, and household hazardous waste (HHW) collection and management. Additionally, we utilize aerial drone technology to provide high-resolution video and imagery damage assessments, enabling more efficient documentation and response coordination. This broad range of in-house capabilities positions Looks Great Services as a turnkey provider ready to handle every aspect of disaster debris management with speed, safety, and accountability.

Why LGS Is The Best Fit

Looks Great Services of MS, Inc. is uniquely qualified to perform the City of Destin's Disaster Debris Management Services Project due to our extensive experience, proven track record, and comprehensive resources dedicated to emergency response operations. With over two decades of successful disaster recovery work across the Gulf Coast and Southeastern United States, we have consistently delivered timely, safe, and compliant debris removal and management services in response to hurricanes, tornadoes, and other catastrophic events. Our company owns and operates a vast fleet of specialized debris removal equipment, maintains a large, pre-qualified workforce, and has an established network of subcontractors to scale operations rapidly when needed. We are fully equipped to meet FEMA, FHWA, and state regulatory requirements, ensuring all documentation, monitoring, and compliance needs are seamlessly handled. Our commitment to safety, accountability, and community-focused service makes Looks Great Services the ideal partner to help the City of Destin recover quickly, efficiently, and responsibly following a disaster.

Tab 3 – Experience and Ability

Organizational Background

The occurrence of storm disasters in the United States has increased sharply in recent years. With the prediction of larger and more destructive storms in the future, Looks Great Services of MS, Inc. has developed quick response teams and a fleet of more than 350 pieces of specialized debris management equipment. Because of our experience in providing equipment and leadership in such emergencies, we are now a part of aiding agencies in the pre-disaster planning process.

In 1999 Looks Great Services, Inc. was founded in New York. The company has recruited, developed, and trained a team of individuals able to respond to client needs in a professional and courteous manner. In spring 2005, Looks Great Services of Charlotte was launched in North Carolina. In addition to the same services offered in New York, Charlotte added the manufacturing of vegetation products, such as mulch and topsoil, and moved into the land clearing/development industry. In spring 2010, Looks Great Services of MS was established opening operations in Columbia, MS and has the designation as a woman-owned small business. The increased demand for companies that provide utility line clearing as well as right-of-way clearing and maintenance in the mid-south region has allowed the company to continue its steady expansion to over 200 full-time employees. With locations in the Northeast, Mid-Atlantic and the Mid-South regions and 25 years of vegetative management experience, we are strategically positioned to provide vegetation services across the East Coast and beyond.

In addition to the LGS equipment, we have pre-approved contractors which will provide immediate additional labor and equipment. We can quickly expand our services to over 1,000 pieces of equipment to meet the requirements necessary to handle any disaster.

From destructive insects to winter ice damage, LGS is prepared to respond to situations anywhere in the United States. Our storm damage relief team is available to townships, cities, counties, and states. In cooperation with other professional organizations, today, LGS is continually asked to provide leadership, equipment, and personnel to aid in vegetation management.

Staff Resumes

Kristian Agoglia

Professional Experience

November 2010 - Present	Looks Great Services of MS, Inc. Vice President

Helped form Looks Great Services of MS, Inc. and participate daily in operations, lead management and procurement duties, and ensure the standards of performance established are continually met by personnel. Has been involved in more than 110 disaster projects since 2002, including simultaneously managing 10+ projects at one time during Sandy in 2012-2013, 5 contracts in 2017 during Hurricane Irma, 6 contracts in 2017 after a string of Mississippi tornadoes, and 11 contracts in 2020 after a tornado/straight-line wind outbreak.

1999 - Present	Looks Great Services, Inc. CEO

Since inception, as owner and CEO of LGS, participated daily in operations, lead management and administrative duties, and ensured the standards of performance established are continually met by personnel.

1990 - 1999	T&K Landscaping Company Partner

Started a small landscaping and lawn maintenance business during high school years. Expanded into tree pruning, maintenance, and removal. Grew business steadily during successful pursuit of bachelor's and master's degrees.

Certifications

ISA Certified Arborist
ISA Certified Utility Arborist
Specialist TCIA Certified Safety
Professional EHAP Training
Certified
OSHA 10 Certification

Education

REGENT UNIVERSITY – Virginia Beach, VA – Master of Divinity – 1999

LIBERTY UNIVERSITY – Lynchburg, VA – Bachelor of Science – 1996

Sean Hunt

Professional Experience

April 2022 - Present — Looks Great Services of MS, Inc.
Executive Vice President/Project Manager

Oversees all facets of Looks Great Services' Emergency Response Division. Coordinates, delegates, and manages the entire life cycle – from procurement to active project closeout to ensure they are on time, within budget, and performed according to specifications. Currently managing a multi-county project for Virginia Department of Transportation from a snowstorm earlier in 2022.

2004 - 2022 — Michael's Tree and Loader Service, LLC
CFO/Vice President

Participated daily in operations, lead management and administrative duties, and ensured the standards of performance established are continually met by personnel. Managed 48 FEMA events including managing crews on multiple, simultaneous events, including 3 parishes during Hurricane Katrina, 3 cities in Connecticut in 2011 and crews on 5 contracts during Hurricane Sandy in 2012-2013. Exceedingly well versed in FEMA rules and guidelines.

Certifications

ISA Certified Arborist
FEMA Debris Management

Education

CHRISTIAN BROTHERS UNIVERSITY – Memphis, TN – B.S. in Science in Biology – 2004

AMERICAN MILITARY UNIVERSTIY – Memphis, TN – M.S. in Emergency and Disaster Management – 2010

Don Lucas

Professional Experience

November 2012 - Present — Looks Great Services of MS, Inc.
Debris Site Manager

Oversee the daily operations for Looks Great Services. Coordinates, delegates, and manages existing projects to ensure they are on time, within budget, and performed according to specifications. Specialized in logistics of material hauled onto and away from dump sites on a production-oriented schedule, and material reduction in Hurricane Sandy. Ensured proper size control and safety of handled material with management of full-scale equipment operations during Hurricane Sandy. Oversaw multiple dump sites after Hurricane Sandy that totaled over 1.1 million cubic yards of debris. Oversaw storm debris cleanup after the Louisville, MS tornado, Itawamba, MS tornado, and the Tupelo, MS tornado for the Mississippi Department of Transportation. Oversaw multiple dumpsites throughout 5 counties in Mississippi during a 2017 tornado outbreak and again in 2020 during a tornado/straight-line wind outbreak. In 2021, managed debris sites in 3 counties in Alabama after Hurricane Zeta.

2006 – November 2012 — Joe McGee Construction
Company Consultant

Collaborated with Vice President, Senior Engineer, and Senior Estimator on project bids, locating fill material sites and researching soils and landscapes. Coordinated project schedules to ensure timely completion and implemented corrective measures for any issues. Monitored job costs with the Senior Estimator to stay within budget and worked with the Senior Engineer to ensure adherence to project plans. Experienced in Federal design/build projects, fostering positive relations with government officials for successful outcomes.

1974 – 2006 — T.L. Wallace Construction Co., Inc.
President

Began early on as a Project Superintendent to eventually become President of the company. Beginning in 1986, responsibilities included overall company management, overseeing of projects, budgets, potential projects, bidding, personnel staffing and equipment management. Contracted over $140 million worth of heavy highway construction projects under contract at one time with MDOT, ALDOT and LDOT. Managed approximately $800 million worth of construction projects with a majority of the work being with MDOT. Oversaw individual projects ranging from $1 million to $25 million. Managed a fleet of 150 pieces of heavy equipment. Initiated and coordinated remarkable hauling of dirt for Nissan site to include 78 trucks in two-mile haul and supporting equipment to place and compact dirt. Managed and coordinated Interstate 10 Emergency Bridge Replacement across Pascagoula River after Hurricane Katrina. Project was complete in 21 days, 10 days ahead of schedule.

Crew Worker in Landscaping Maintenance and Construction

Spencer Stovall

Professional Experience

July 2023 – Present

Looks Great Services of MS, Inc.
Project Manager

Acts as the Project Manager/Estimator/Sales Director at Looks Great Services of MS. In this capacity, he was instrumental in overseeing a $30 million contract for Hurricane Idalia cleanup in Lake City, Florida. He directed project management activities such as estimation, scheduling, resource allocation, data entry, and quality control. Moreover, he fostered and maintained strong client relationships, which resulted in increased sales and repeat business. Spencer's expertise spans operations management, project management, quality control, estimation, and cost analysis. Additionally, he excels in sales, business development, client relationship management, leadership, team building, communication, and negotiation.

May 2020 – July 2023

Debris Tech
Project Manager

Manage Disaster Debris Related Projects consisting of $15 million or less. Oversaw all aspects of the job. Coordinated debris cleanup, hauling routes, debris separation, TDMS site management, costs controls, schedules, and communication with the clients. Tracked number of debris hauled and separated accordingly. Served as a liaison between City/County, State, FEMA officials, and the field operations to ensure safe and efficient operations as well as updates on progress of the cleanup efforts.

December 2019 – March 2020

Dungan Engineering
Surveyor

Successfully conducted several land and boundary surveys for various projects, utilizing advanced surveying instruments to collect precise data on land features. Ensured accuracy and regulatory compliance by analyzing survey data, producing detailed CAD reports, and resolving boundary discrepancies through thorough research. Collaborated closely with engineers, architects, and construction managers, providing essential survey insights and maintaining clear communication with clients and government agencies. Involved in the planning and managing of survey projects, supervising field teams, and implementing quality control measures. Addressed challenges with critical thinking, resulting in successful project completion, enhanced client relationships, and consistently high-quality survey results.

Subcontractor Plan

Corporate Policy

As a Woman-Owned Business and DBE, Looks Great Services of MS, Inc. (LGS), in efforts to ensure compliance with FAR Part 19, although as a small business we are not required to do so, and in anticipation of similar requirements as are contained in this solicitation, has previously developed this Local and Small Business Participation Plan (LSBPP) for implementation during operations. This LSBPP shall be made part and included in any subsequent subcontracts let by LGS where FAR Part 19 applies. In conjunction with this LSBPP, for each contract subject to the FAR, LGS shall develop a contract specific Small Business Subcontracting Plan (SBSP) to ensure compliance and make each subsequent SBSP be attached hereto as a supplement to this LSBPP.

LGS' corporate policy is that all business, whether large or small, be afforded an opportunity for full participation in the free enterprise system, and to implement this policy, LGS is committed to promoting full and equitable participation by qualified small business in the provision of goods and services to the City of Destin through subcontract to LGS.

In compliance with FAR Part 19, the LSBPP includes, at a minimum:

1) Each subcontracting plan required under 19.702(a)(1) and (2) must include –

    i) Separate percentage goals for using small business concerns and small disadvantaged business concerns as subcontractors;
    ii) The name of an individual employed by the offeror who will administer the offeror's subcontracting program, and a description of the duties of the individual;
    iii) A description of the efforts the offeror will make to ensure that small business concerns and small disadvantaged business concerns will have an equitable opportunity to compete for subcontracts;
    iv) Assurances that the offeror will include the clause at 52.219-8, Utilization of Small Business Concerns and Small Disadvantaged Business Concerns (see 19.708(b)), in all subcontracts that offer further subcontracting opportunities, and that the offeror will require all subcontractors (except small business concerns) that receive subcontracts in excess of $500,000 ($1,000,000 for construction) to adopt a plan similar to the plan required by the clause at 52.219-9, Small Business and Small Disadvantaged Business Subcontracting Plan (see 19.708 (c));
    v) Assurances that the offeror will (i) cooperate in any studies or surveys as may be required, (ii) submit periodic reports in order to allow the Government to determine the extent of compliance by the offeror with the subcontracting plan, and (iii) submit Standard Form (SF) 294, Subcontracting Report for Individual Contracts, and SF 295, Summary Subcontract Report, in accordance with the instructions on the forms.
    vi) A recitation of the types of records the offeror will maintain to demonstrate procedures adopted to comply with the requirements and goals in the plan, including establishing source lists; and a description of the efforts to locate small and small disadvantaged business concerns and to award subcontracts to them.

2) Contractors may establish, on a plant or division-wide basis, a master subcontracting plan which contains all the elements required by the clause at 52.219-9, Small Business and Small Disadvantaged Business Subcontracting Plan, except goals. Master plans shall be effective for a 1-year period after approval by the contracting officer;

however, a master plan when incorporated in an individual plan shall apply to that contract throughout the life of the contract.

3) For contracts containing options, the cumulative value of the basic contract and all options is considered in determining whether a subcontracting plan is necessary (see 19.705-2(a)). If a plan is necessary and the offeror is submitting an individual contract plan, the plan shall contain all the elements required by 19.704(a) and shall contain separate parts, one for the basic contract and one for each option.

Goals Established for LSBPP

The following are the planned percentages of the total contract to be subcontracted and LGS' goals as defined by current Federal Goals. These goals are expressed in percentages of the total planned sub-contracting dollars with a base contract value.

Percentage goals of total dollars to be sub-contracted:	
Goal for Local Small Businesses (SB)	40.0%
Goal for Local Small Disadvantaged Businesses (SDB)	18.0%
Goal for Local Women-Owned Small Business (WOSB)	8.0%
Goal for Local HUBZone Businesses (HUB)	8.0%
Goal for Local Veteran Owned Small Businesses	3.0%
Goal for Local Service-Disabled Veteran-Owned Small Business	3.0%

Any sub-contractor could be asked to perform any debris management or support function as long as they meet the qualifications established by LGS.

Plan Administrator & Duties

LGS' Plan Administrator is Mr. Kristian Agoglia, Vice President, who is directly responsible for implementation of this plan. He will ensure the required documentary proof of the implementation, progress, and final outcome of this plan and provide the same information through periodic reports to the City of Destin with regards to subsequent contracts resulting from this solicitation. The individual named above has general overall responsibility for the company's subcontracting program, i.e., developing, preparing, and executing subcontracting plans and monitoring performance relative to the requirements of those subcontracting plans and perform the following duties:

1) Develops and promotes company-wide policy initiatives that demonstrate the company's support for awarding contracts and subcontracts to SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB concerns; and assures that these concerns are included on the source lists for solicitations for products and services they are capable of providing;
2) Develops and maintains bidder source lists of SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB concerns from all possible sources;
3) Ensures periodic rotation of potential subcontractors on bidder's lists;
4) Ensures that SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB businesses are included on the bidders' list for every subcontract solicitation for products and services that they are capable of providing;
5) Ensures that Requests for Proposals (RFPs) are designed to permit the maximum Small Business Outline and Guidance Subcontracting Plan practicable participation of SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB concerns;
6) Reviews subcontract solicitations to remove statements, clauses, etc., which might tend to restrict or prohibit SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB participation;
7) Accesses various sources for the identification of SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB concerns to include the SBA's PRO-Net and SUB-Net Systems, (http://www.sba.gov), the National Minority Purchasing Council Vendor Information Service, the Office of Minority Business Data Center in the Department of Commerce, local small business and minority associations, contact with local chambers of commerce and Federal agencies' Small Business Offices;

8) Establishes and maintains contract and subcontract award records;
9) Participates in Business Opportunity Workshops, Minority Business Enterprise Seminars, Trade Fairs, Procurement Conferences, etc;
10) Ensures that SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB concerns are made aware of subcontracting opportunities and assisting concerns in preparing responsive bids to the Company;
11) Conducts or arranges for the conduct of training for purchasing personnel regarding the intent and impact of Section 8(d) of the Small Business Act, as amended;
12) Monitors the company's subcontracting program performance and makes any adjustments necessary to achieve the subcontract plan goals;
13) Prepares and submits timely, required subcontract reports;
14) Coordinates the company's activities during the conduct of compliance reviews by Federal agencies.

Methods to Achieve Subcontracting Goals

LGS will continually review goals, active databases for qualified SB sub-contractors, and will monitor the implementation of this plan to achieve Federal and Local goals. These goals will be instituted for procurement of goods, services or construction as needed to achieve successful goal implementation utilizing the following outreach efforts to obtain sources:

1) Contacting minority and small business trade associations;
2) Contacting business development organizations and local chambers of commerce;
3) Attending SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB procurement conferences and trade fairs;
4) Requesting sources from the Small Business Administrations (SBA) PRO-Net and SUB- Net Systems, (http://www.sba.gov), (www.ladotd.gov), and other SBA and Federal agency resources.
5) Conduct market surveys to identify new sources;
6) Identify local trade papers and local trade organization focusing on SB, SDB, WOSB, HUBZone, VOSB and SDVOSB;
7) Coordinate with local government to acquire existing lists of pre-identified SB, SDB, WOSB, HUBZone, VOSB and SDVOSB in the Presidentially/FEMA Designated Disaster Area;
8) Internal efforts to guide and encourage purchasing personnel in:
    a. Conducting workshops, seminars, and training programs;
    b. Establishing, maintaining, and utilizing SB, SDB, WOSB, HUBZone, VOSB, and SDVOSB source lists, guides, and other data for soliciting subcontractors; and
    c. Monitoring activities to evaluate compliance with the subcontracting plan

Evaluation of goal attainment will be documented as required by the 25-05-PW for subsequent contracts resulting from this solicitation.

Methods to Determine Qualified Subcontractors

LGS will use a prequalification process to determine the subcontractors to meet Federal and Local goals as per the specifications in the RFP. The prequalification process will provide a way to select subcontractors that meet the requirements set forth by the governing bodies. The prequalification process will look for the following:

1) Familiarity with Certified Payroll;
2) Certified Small Business classification (as applicable)
3) Worker's Comp and Liability Insurance are in place as required;
4) Adequate equipment to perform work according to the specifications;
5) Ability to maintain equipment;
6) Ability to put a safety plan in place as required

LGS will also work with the 25-05-PW and other governing bodies in prequalification process in order to assemble the best possible team to perform the work.

Inclusion of FAR 52.219-8

LGS will include contract clause FAR 52.219-8 in all subcontracts that offer further subcontracting opportunities and will require all subcontractors (except small business concerns) that receive contracts in excess of $500,000.00 ($1,000,000.00 for construction) to adopt a plan similar to the LGS Small Business Subcontracting Plan (SBSP) and as required by FAR 52.219- 9, Small Business and Small Disadvantaged Business Subcontracting Plan.

Surveys and Reporting Requirements

LGS offers assurances to Federal Government as well as the 25-05-PW that our company will fully and openly cooperate in any studies or surveys as may be required and shall submit periodic reports to allow the government to determine the extent of compliance with our Small Business Subcontracting Plan (SBSP). Submittals may include at a minimum; Standard Form (SF) 294, Subcontracting Report for Individual Contracts, and SF 295, Summary Subcontract Report, in accordance with the instructions on the forms. Additional reports will be submitted as required by specific task orders. LGS will submit to the 25-05-PW on ISR (SF 294) and SSR (SF 295) as required.

Good Faith Efforts

Having utilized small business subcontractor support on past projects, LGS has developed and maintained an extensive subcontractor database. To expand this database and include more SB and DBE concerns in the impacted areas, additional published electronic data resource information has been and will continue to be used in our operations nationally. Documentation of our outreach programs supporting SB subcontracting efforts, Letters of Commitment and other periodic internal reports will be maintained by LGS and shall be available for review at any time by the government.

Many of the services required under this solicitation will be performed using our own internal resources and our team's existing nationwide personnel, facilities, and equipment. However, LGS has already reached out to local SBs and DBEs in response to this RFP. A list of local business concerns, including SBs and DBEs are included at the end of this section. LGS takes great pride in our long history of rapidly mobilizing and effectively managing large teams of subcontractors.

The remainder of FAR Part 19 is incorporated by reference in the LSBPP and shall be implemented as required by the 25-05-PW and specific task orders.

Services and Supplies to Subcontract

LGS plans to subcontract a portion of the following item(s) in relation to the goals contained herein for any subsequent contract because of this solicitation:

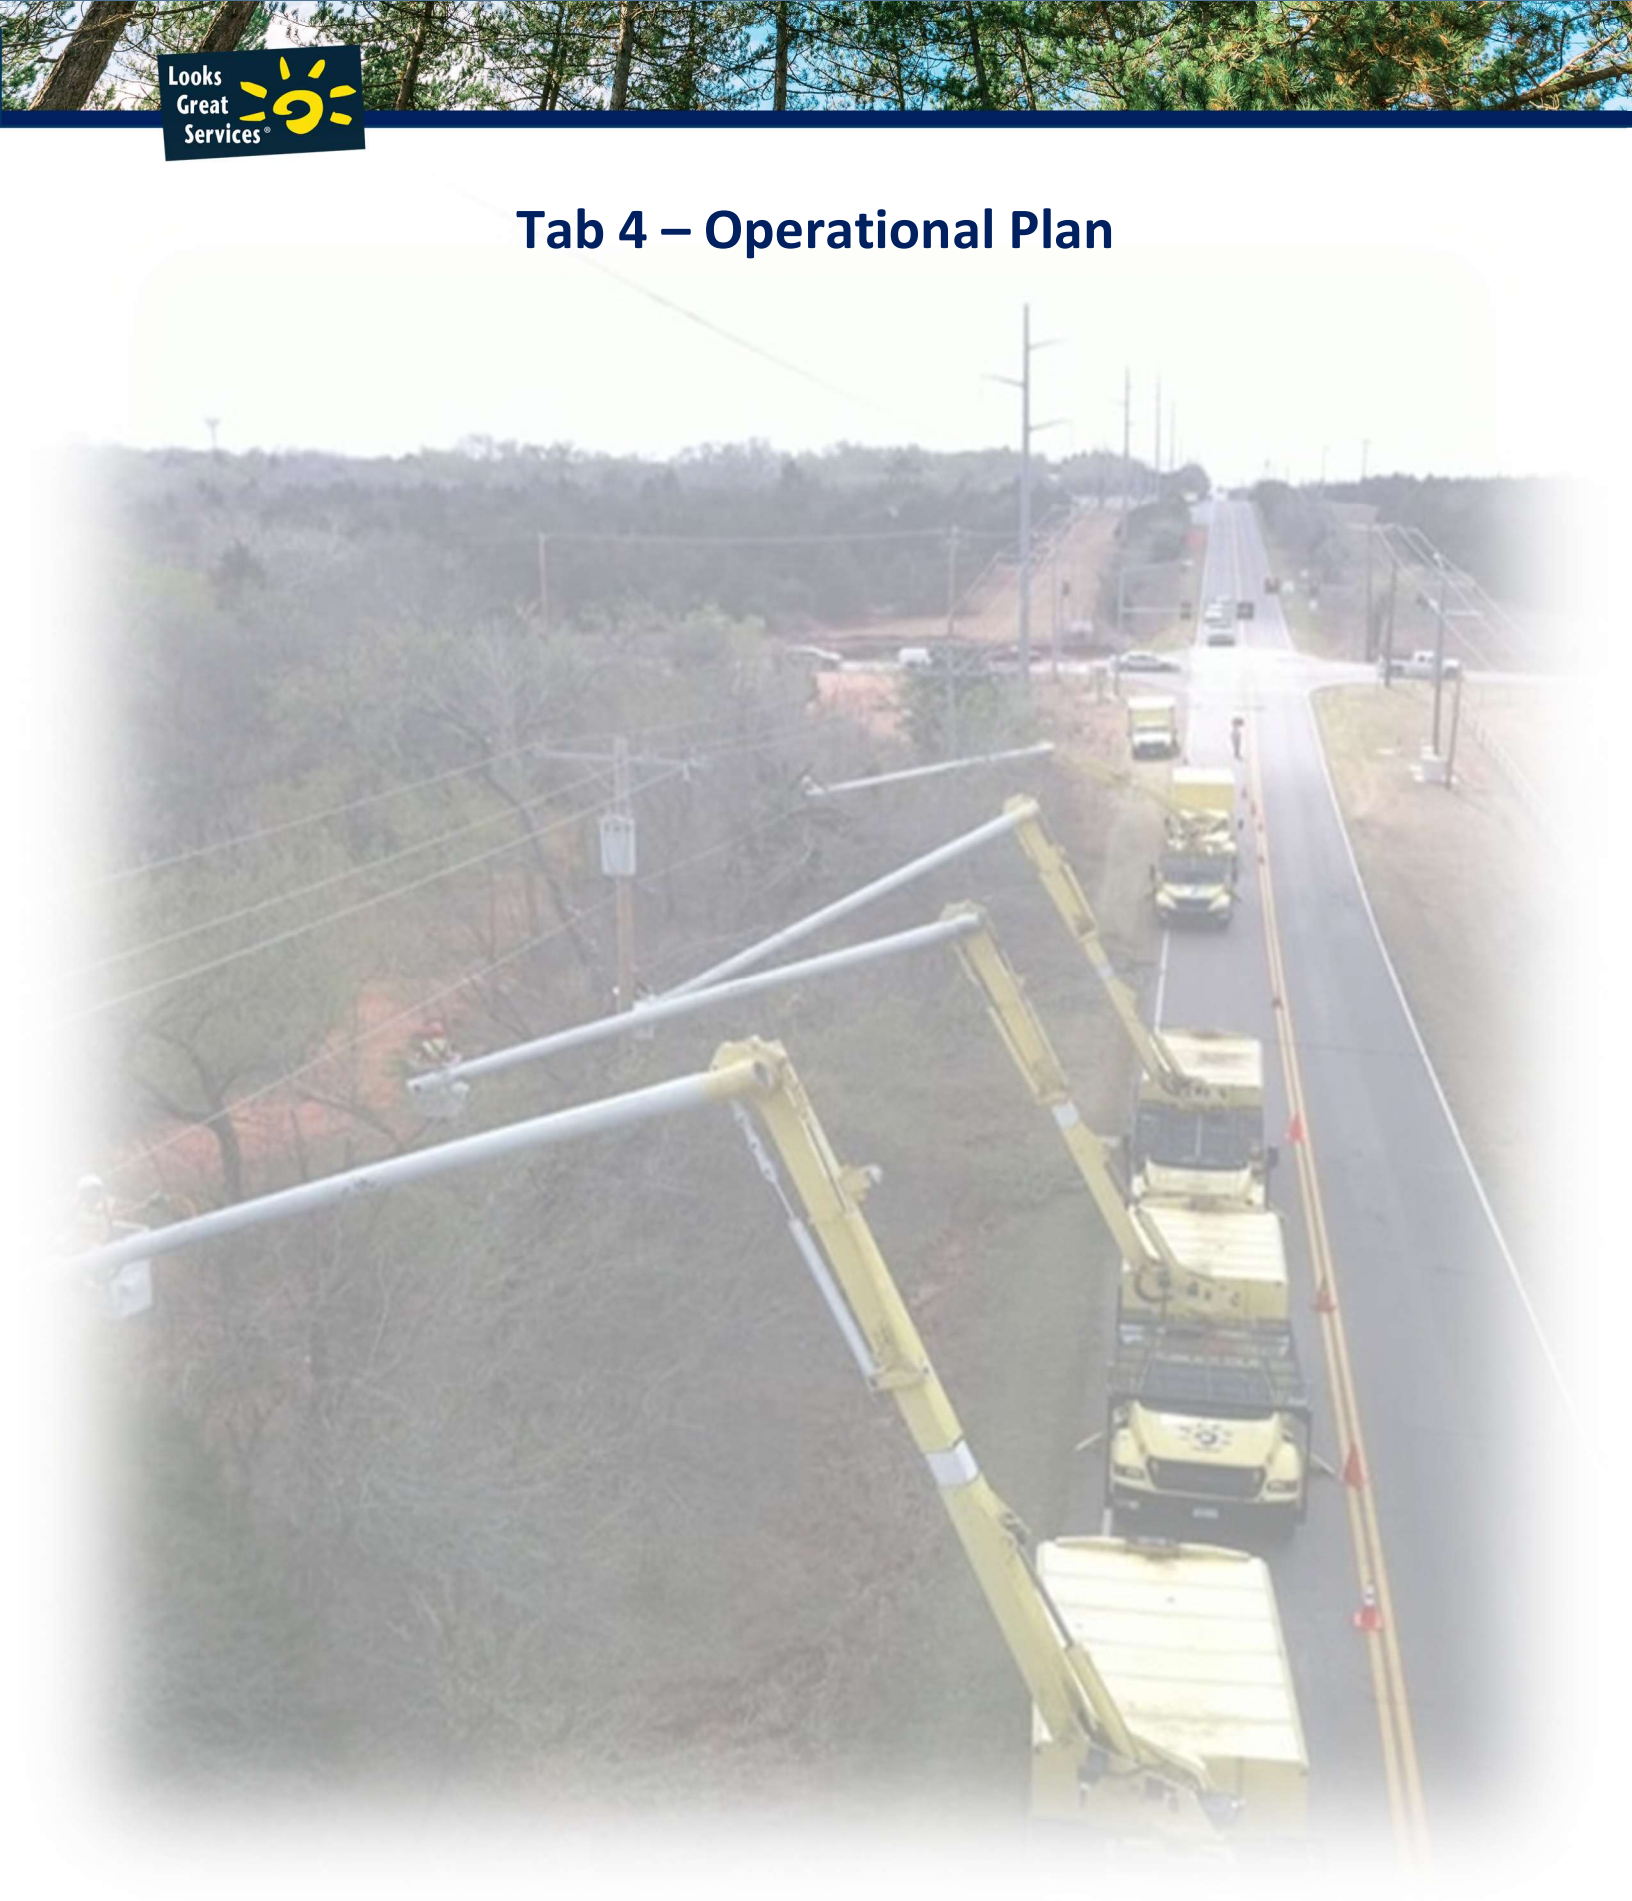
- Curbside/Right-of-way debris collection and transportation
- Equipment transportation for mobilization and operational support
- Demolition of structures (should we be tasked with this operation)
- Debris reduction operations (should we be tasked with this operation)
- Debris disposal operations
- Debris recycling for beneficial reuse
- Rental and operation of equipment
- General labor
- Safety and Loss Control Services
- Quality Assurance/Quality Control
- Environmental Services
- Contract Administration Support
- Administrative Support

- Accounting
- Workforce housing
- Fuel Services
- Custodial Services
- Equipment Maintenance
- Food Services
- Real Estate Support
- Legal Support
- Other services as identified at time of need

Current Debris Contracts

1. Cape Coral, FL
2. Central Florida Electric Cooperative
3. City of Deltona, FL
4. Escambia County, FL
5. FDOT – Miami-Dade County
6. FDOT – Monroe County
7. Florida City, FL
8. Florida State University
9. Hernando County, FL
10. City of Homestead, FL
11. Lake City, FL
12. Miami Gardens, FL
13. Milton, FL
14. City of Oviedo, FL
15. Santa Rosa County, FL
16. Seminole Tribe of Florida
17. The Villages Community Development District
18. Tyndall Air Force Base
19. West Park, FL

Tab 4 – Operational Plan



Approach to Debris Management

Debris Pick-up (Loading at Curbside)

Commencement of Pick-Up

LGS will mobilize within 24 hours of receipt of a Task Order or Notice to Proceed. Debris pick-up will commence within 24 to 48 hours of receipt of a Task Order and Notice to Proceed from the 25-05-PW. Debris operations will commence in an orderly and manageable fashion on streets and roads cleared sufficiently for access as designated by the City of Destin Task Order(s).

Field Supervisors/Crew Foremen

Project Managers will report to the Senior Project Manager. All LGS Managers will be responsible to ensure work is conducted only in those areas designated by the 25-05-PW. Supervisors will not allow work to commence in additional areas until directed by a City of Destin Task Order. Supervisors will be responsible for the safety of all personnel and equipment. Supervisors will be responsible for collection of daily personnel and equipment time logs, and their distribution to LGS designated representative with a copy given to City of Destin's Authorized Representative (AR).

Crew foremen will report to their designated supervisor. Foremen will be responsible to ensure work assignments received from their supervisor are completed to the requirements of the City of Destin Task Order. Foremen will be responsible for maintaining the daily personnel and equipment time logs.

Equipment

Debris pick-up equipment will include but is not limited to the following:

- Self-Loaders/Knuckle-boom trucks
- Rubber tire front end loaders with grapple buckets
- Rubber tire front end loaders with 4-in-1 buckets
- Rubber tire backhoes with thumb
- Haul trucks with attached grapple arms
- Other specialized equipment (e.g. Bobcat)

The cadre of equipment:
- Is owned or leased
- Is available for movement
- Will be leased in other areas if necessary
- Transportation Plan has been developed

Maintenance/Fuel Vehicles and Personnel

Maintenance/fuel vehicles will be assigned and manned as needed to provide an adequate supply of fuel and to provide all required field maintenance to ensure equipment operations.

Hand Crews

1–2 laborers with sufficient hand tools will accompany each piece of heavy equipment.

Operations

Debris segregation and sorting will be conducted at street/road level to the maximum amount practical and as instructed by the City of Destin TOs. All debris will be picked up and loaded into haul trucks in a safe and workman-like manner to ensure compliance with the Corporate Safety Plan. Safety will not be compromised and is outlined with specifics in the LGS Safety Plan. All crew foreman and field supervisors will be responsible to ensure a rapid and

cost effective as possible operation. Operators, to ensure maximum loading and safe transport of material, will size all vegetative debris with a CR present.

All construction and demolition materials will be sized for heavy equipment to ensure maximum loading and safe transport of materials within EPA and DOT standards. Obvious hazardous materials will be dealt with in accordance with the City of Destin Task Order and the Corporate Environmental Protection Plan and in compliance with the Corporate Safety Plan.

Traffic control personnel, with appropriate traffic control safety equipment, will be stationed at each approach point of the work area to maintain traffic control and prevent personal injury to ensure compliance with the Corporate Safety Plan. Additional traffic control personnel will be stationed throughout the area, as needed, to ensure safe operations.

Debris Hauling

Debris hauling may consist of 2 distinct operations as follows:

1. Hauling of unreduced debris from origination point to staging area (Temporary Debris Management Site(s) - TDMS.)
2. Hauling of reduced debris from staging area to final disposal site.

Construction and Demolition Debris:

LGS advises City of Destin that construction and demolition debris be hauled directly to final disposal site from point of origination. This direct haul method will ensure that all demolition debris is handled in accordance with local, state and federal requirements. The direct haul method is not considered the expeditious operation, it is the industry's best practice to construction and demolition debris as little as possible due to the potentially hazardous nature of the material.

Vegetative Debris:

LGS advises City of Destin that vegetative debris be hauled to a TDSRS in order to expedite debris removal. It is the operational goal of LGS to complete debris removal services as quickly as possible for the City of Destin, in order that they may be able to take advantage of the 60-day window of maximum reimbursement. The TDSRS site will ensure that LGS operations are completed in the shortest amount of time; therefore, reducing direct costs to the City of Destin such as monitoring, management, and the need for additional reimbursable assets. This method of operations allows for the most efficient completion of debris removal, which is in the best interest of the health and safety of the public.

Hazardous Leaner and Hanger Removal

Looks Great Services is operationally capable of providing specialized crews that are trained and equipped to remove hazardous leaners from Right-of-Way and any trees containing eligible hangers. These available in-house resources set LGS apart by allowing us to provide ISA Certified Utility Arborist supervised tree crews. Our daily experience in providing vegetation management for utilities allows us to offer these services, thus ensuring a thorough inspection of all affected trees and properly addressing the City of Destin's needs and meeting their requirements.

Field Supervisors/Crew Foremen

Field supervisors will report to the senior field supervisor. All field supervisors will ensure that all hauling operations comply with local, state, and federal DOT standards in effect at that time and ensure compliance with the Corporate Safety Plan. All supervisors will be responsible to ensure work is conducted only in those areas designated by City of

Destin. Supervisors will not allow work to commence in additional areas until directed by the 25-05-PW's Authorized Representative.

Supervisors will be responsible for the safety of all personnel and equipment. Supervisors will be responsible for collection of daily personnel and equipment time logs, and their distribution to LGS designated representative(s) with a copy given to City of Destin. Supervisors will be responsible for ensuring accuracy, completing CQC and collecting load/haul tickets and daily load/haul logs from haul truck operators. The supervisor will complete forms. Crew foremen and project managers will report to their designated supervisor. Foremen will be responsible to ensure work assignments received from their supervisor are completed to the requirements of the City of Destin Task Order. Foremen will be responsible for maintaining the daily personnel and equipment time logs.

Equipment

Hauling equipment will include, but is not limited to:

- 16-20 cubic yard dump trucks
- 21-30 cubic yard dump trucks
- 30-50 cubic yard tractor trailers
- 50-75 cubic yard tractor trailers
- 75-100+ cubic yard tractor trailers
- Roll-off dumpsters or any other hauling equipment

The cadre of equipment:
- Is owned or leased
- Is available for movement
- Will be leased in other areas if necessary
- Transportation Plan has been developed

Experience has shown that, for longer haul distances, larger capacity trucks (100 + C/Ys) are more cost effective.

All equipment will be mechanically loaded only, and haul truck beds will be equipped with tailgates constructed of materials (i.e. chain-link fence, safety fence, etc.) that will safely contain debris, allow each haul truck to be loaded to its capacity and also allow rapid dumping of debris from the bed. Any haul truck bed that has or will have vertical extensions installed, will comply with the following restrictions:

Haul truck bed extensions will comply with all applicable local, state and federal laws. Bed extensions, when installed, will be located, and secured to the front-end, left side and right side of the bed. Bed extensions will not extend beyond 24 inches above the manufacturer’s bed height. Bed extensions will be constructed of not less than 2" x 6" lumber placed flush against the manufacturer's bed and each subsequent piece of lumber to withstand loader impact. Lumber will be secured to the manufacturer's bed with angle or channel iron and bolts. Each side extension will be secured with metal brackets and bolts to the front-end extension. All supervisors will utilize the check sheet provided by LGS Safety Officer to ensure all safety equipment is maintained and operable on all debris hauling equipment to ensure compliance with the Corporate Safety Plan.

Past experience has shown that, for longer haul distances, larger capacity trucks (100 + C/Ys) are more cost effective.

All equipment will be mechanically loaded only, and haul truck beds will be equipped with tailgates constructed of materials (i.e. chain-link fence, safety fence, etc.) that will safely contain debris, allow each haul truck to be loaded to its capacity and allow rapid dumping of debris from the bed. Any haul truck bed that has or will have vertical extensions installed, will comply with the following restrictions:

Haul truck bed extensions will comply with all applicable local, state, and federal laws. Bed extensions, when installed, will be located, and secured to the front-end, left side and right side of the bed. Bed extensions will not extend beyond 24 inches above the manufacturer’s bed height. Bed extensions will be constructed of not less than 2" x 6" lumber placed flush against the manufacturer's bed and each subsequent piece of lumber to withstand loader impact. Lumber will be secured to the manufacturer's bed with angle or channel iron and bolts. Each side extension will be secured with metal brackets and bolts to the front-end extension. All supervisors will utilize the check sheet

provided by LGS Safety Officer to ensure all safety equipment is maintained and operable on all debris hauling equipment to ensure compliance with the Corporate Safety Plan.

Maintenance/Fuel Vehicles and Personnel

Maintenance/fuel vehicles will be assigned and manned as needed to provide an adequate supply of fuel and to provide all required field maintenance to ensure equipment operations.

Operations

All field supervisors will ensure that all debris-hauling operators are licensed and/or certified to operate the required equipment. All debris-hauling operators will be given area maps designating assignment/authorized areas of operations as well as transport routes designated and/or approved by City of Destin. All debris haul operators will visibly display colored signs provided by LGS and, if applicable, City of Destin. LGS signs are secured, weather-proof signs will be placed on the driver and passenger doors of the vehicle cab. Any signs provided by the City of Destin will be displayed on both sides of the forward most section of the vehicle bed, unless otherwise directed by City of Destin. All signs will be removed from the exterior of the vehicle, at close of business each day and secured by the driver to prevent theft or loss.

Colored paper signs/passes will be displayed on the driver's side windshield of each vehicle. The color of the sign/pass is subject to change, without notice, to ensure quality control measures regarding authority to enter work sites. Each sign/pass will contain the following information: company logo, contract location, the City of Destin name, contract number, truck number, date of issue, supervisor name/signature.

All debris pick-up and haul operators will maintain the numbered debris hauling/transportation documentation/verification form "LGS Debris Transportation". Each form contains directions, which should be followed. All supervisors will be responsible to ensure that all employees utilizing and/or inputting information on the form are procedurally trained. It will be each supervisor's responsibility to maintain a supply of the required number of forms. Forms will be distributed by supervisors/foremen to debris haul operators during debris pick-up operations. All debris haul operators will maintain daily ticket/haul records to be turned into field supervisors, with copies of load tickets at close of business each day.

Reduction and Site Management

Debris Staging

Debris staging sites, TDSRS, will be located, acquired, and designated by City of Destin unless specified otherwise. Construction of TDSRS elements will commence immediately upon receipt of a Task Order and Notice to Proceed from City of Destin. LGS will ensure that TDSRS construction will be accomplished as rapidly as possible, because of the criticality of staging sites to the debris removal process as a whole.

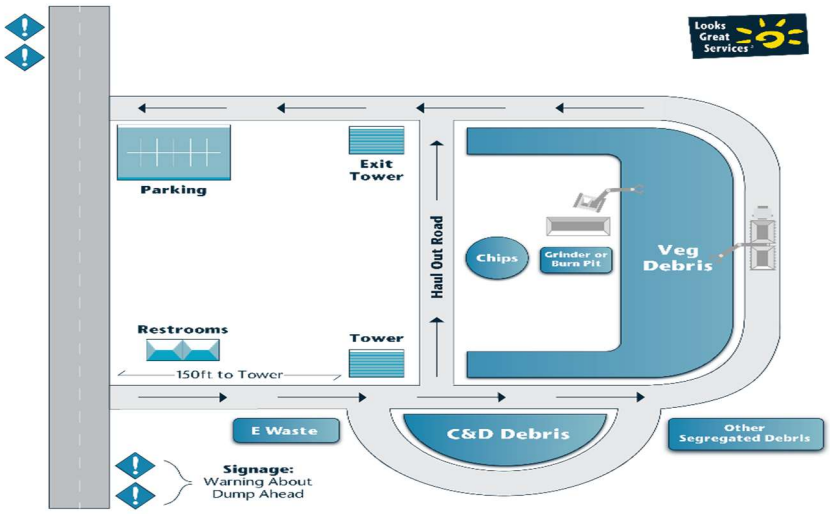


Figure 1: TDSRS Sample Layout

Field Supervisors/Crew Foremen

Field supervisors will report to the senior field supervisor. Debris staging site supervisors (TDSRS Managers) will be responsible for management of all operations of the TDSRS to include site safety, haul load inspection, segregation, traffic control, dumping, reduction, security, and remediation. Supervisors will be responsible for the safety of all personnel and equipment to ensure compliance with the Corporate Accident Prevention Plan as part of the Corporate Safety Plan.

LGS Supervisors will be responsible for collection of daily personnel and equipment time logs, and their distribution to LGS designated representative with a copy given to City of Destin. LGS Supervisors will be responsible for collecting load/haul tickets and daily load/haul logs from haul truck operators. Inspection tower personnel will complete the forms.

Crew foremen will report to their designated supervisor. Foremen will be responsible to ensure work assignments received from their supervisor are completed to the requirements of the City of Destin Task Order. Foremen will be responsible for maintaining the daily personnel and equipment time logs.

Equipment

Debris staging site equipment may include but is not limited to the following:

- Excavators with thumb
- Track type tractors with root rakes
- Track type tractors with push blade
- Farm type tractor with box blade
- Motor grader
- Rubber tire loader
- Tub grinder
- Brush chipper
- Air curtain burner

All equipment will meet current safety standards.

Maintenance/Fuel Vehicles and Personnel

Maintenance/fuel vehicles will be assigned and manned as needed to provide an adequate supply of fuel to maintain equipment operations. Maintenance/fuel vehicles will be assigned and manned as needed to provide all required field maintenance to ensure equipment operations.

Laborers:

1–2 laborers with specialized hand tools for segregation and separation will accompany each piece of heavy equipment.

Debris Staging Site Key Steps

The following information will be utilized to create a location specific site management plan and site safety plan to accompany this plan.

Site Access

Separate points of ingress and egress should be established if possible. Temporary acceleration and deceleration lanes should be established adjacent to the primary road leading to and from site access points, if approved by City of Destin and appropriate authority having jurisdiction over primary road right-of- way. All temporary roads leading to and through the debris staging site should be constructed and maintained for all weather use (i.e. – rock laid roads).

Inspection Towers

Inspection towers will be constructed to facilitate observation and quantification of debris hauled for storage at debris staging sites. No less than two inspection towers will be utilized at each debris staging site. One tower at point of ingress for use by LGS CQC and the City of Destin QA, one tower at point of egress to ensure all debris hauling trucks are in fact empty upon leaving the site. The egress tower should be manned by at least one representative from City of Destin.

Traffic Controls

Traffic control personnel, with appropriate traffic control safety equipment, will be stationed at the ingress observation tower to maintain vehicular and pedestrian traffic control. Additional traffic control personnel will be stationed throughout the site, as needed, to enforce proper dumping and prevent personal injury to ensure compliance with the Corporate Safety Plan.

Clearing and Grading

Clearing and grading of debris staging sites will be accomplished, to the level required, in accordance with the site management plan and Task Order from City of Destin.

Environmental Protection

LGS' Environmental Protection Plan incorporates such issues as erosion control, hazardous and toxic wastes, dust and smoke control. The Clean Water Act, Storm Water Act, Resource Conservation and Recovery Act, Superfund Amendments and Reauthorization Act and others are incorporated in full by LGS' Environmental Protection Plan. Environmentally sensitive areas (i.e. wetlands, habitat, historical sites) within or in proximity to a debris staging site

will be avoided, designated as sensitive, protected, and access restricted to the extent possible from adverse impact. All requirements of pertinent environmental standards will be complied with.

Debris Storage Areas

Debris will be segregated into 5 main areas of concern as follows unless otherwise instructed by City of Destin:

- Vegetative debris
  - Vegetative debris will be cleaned of C&D debris to the extent possible to facilitate compliance with requirements for reduction of vegetative debris.
- Construction and Demolition (C&D) Debris
  - C&D debris will be dampened prior to dumping and periodically as needed, to comply with local, state and federal EPA standards.
- Recyclable/salvage
  - Recyclable/salvageable materials, including eWastes, will be stockpiled in accordance with the City of Destin Task Order.
- White goods
  - White goods will be stockpiled in accordance with the City of Destin Task Order.
- Hazardous and/or toxic wastes (HHW and HTRW)
  - HHW/HTRW will be segregated and stored in an approved containment area acceptable to City of Destin. All site personnel will receive a safety briefing regarding operations involving HHW/HTRW to prevent personal injury and ensure compliance with the Corporate Accident Prevention Plan as part of the Corporate Safety Plan. HHW/HTRW containment site perimeter will be posted and secured for personnel safety.

Safety Precautions

Water Trucks

The required number of water trucks will be stationed at each debris-staging site. Water trucks will be utilized to reduce the threat of friable materials from C&D debris being released into the atmosphere. Water trucks will be utilized to reduce the threat of fire from all types of debris. If necessary, water trucks will be utilized in fire suppression operations. Water trucks will be utilized to dampen areas, including temporary roadways, to suppress dust from trucks entering and leaving the TDSRS.

Fire Suppression Equipment

Fire extinguishers will be located throughout each debris staging site as required by the site management plan, site safety plan, OSHA requirements and the City of Destin Task Order. All debris staging site personnel will be trained in incipient fire suppression operations and safety procedures, to include operation of fire extinguishers and water trucks and to ensure compliance with the Corporate Safety Plan.

Debris Segregation

This section discusses the guidelines for debris segregation not already discussed previously in this plan.
Street/road Level Segregation

All foremen will direct debris removal personnel to segregate debris into six areas:

- Vegetative debris
- C&D debris
- Recyclable/salvageable materials
- White goods
- HHW
- eWaste

Segregation of debris at the street/road level will not take precedence over completing street/road debris removal operations in a safe and rapid manner. All personnel conducting debris segregation at the street/road level will receive a safety briefing on potential hazards and injury prevention to ensure compliance with the Corporate Safety Plan.

Debris Segregation at Staging Sites

Staging site supervisors will ensure that all debris haul operators deposit debris in areas designated for the type debris hauled. Debris hauled to staging sites in mixed loads will be segregated by heavy equipment when possible and by hand crew when necessary.

Vegetative debris will be placed into two separate piles:

- The first pile (pile one) will be the dumping point until enough has been accumulated to commence a continuous reduction operation.
- Pile two will be started and accumulated until the reduction of the pile one has been completed.
- At which time, dumping of vegetative debris on pile two will cease and pile one will be replenished. This rotation will continue until the task is completed.
- All personnel involved in vegetative debris segregation operations will receive a safety briefing for all effected job to ensure compliance with the Corporate Safety Plan.
- C&D debris will be placed into one or more piles, as required, to reduce the threat of a fire conflagration until it is reduced or disposed.

LGS will consult with the 25-05-PW, local fire officials and pertinent environmental officials regarding the requirements for stock piling of C&D debris.

White goods will be segregated, as required by the City of Destin Task Order. White goods will be placed and stored until instructed by the 25-05-PW as to its final disposition.

Salvageable/recyclable materials will be segregated, as required by City of Destin Task Order. Salvageable/recyclable materials will be segregated and stored until instructed by the 25-05-PW as to its final disposition.

HHW/HTRW will be segregated and stored in a 25-05-PW approved containment area. All site personnel will receive a safety briefing regarding operations involving HHW/HTRW. The HHW/HTRW containment site perimeter will be posted and secured for personnel safety and to ensure compliance with the Corporate Safety Plan as well as the LGS Corporate Environmental Protection Plan. HTW will be segregated and stored until instructed by the 25-05-PW as to its final disposition.

Please see the diagram below for Debris Accountability.

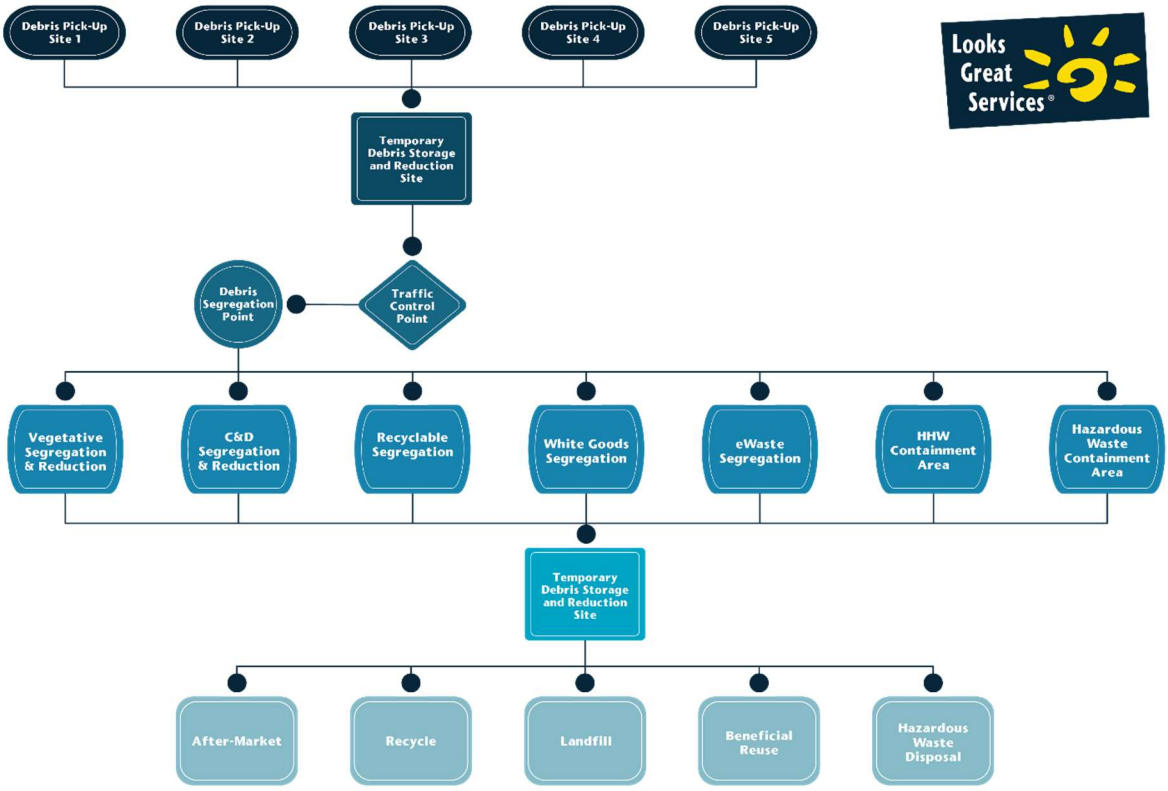

Figure 2: Debris Accountability Flow Chart

Debris Reduction

This section discusses guidelines to be followed during debris reduction operations not already addressed in this plan. If required by a City of Destin Task Order or Notice-to-Proceed, night operations may be conducted. Night operations will be limited to reduction of debris by burning. Night operations will only be conducted upon a determination by the LGS Safety Officer and concurrence by City of Destin, that such operations may be conducted in a safe manner.

Grinding, Chipping and/or Shredding Operations

Grinding, chipping, and/or shredding operations will be accomplished on all vegetative debris not reduced by burning operations. Grinding, chipping, and/or shredding operations are the preferred method of reduction for vegetative debris to accomplish environmental resource conservation through recycle/salvage of wood chips. Although this operation is preferred for environmental purposes, it is also the most time consuming and costly reduction operation due to material handling and haul disposal costs after reduction operations have been accomplished. Grinding, chipping, and/or shredding of C&D materials is prohibited by and within numerous jurisdictions. Grinding, chipping, and/or shredding operations will be accomplished on the type of debris (vegetative and/or C&D) as directed by the City of Destin Task Order.

Grinding, chipping, and/or shredding of vegetative debris will be accomplished on the piles of vegetative debris as set out below:

- Vegetative debris will be placed into two separate piles.

- The first pile (pile one) will be the dumping point until a sufficient quantity has been accumulated to commence a continuous reduction operation.

- Pile two will be started and accumulated until the reduction of the pile one has been completed.
  - At which time, dumping of vegetative debris on pile two will cease and pile one will be replenished. This rotation will continue until the task is completed.

All LGS personnel involved in vegetative debris grinding, chipping, and/or shredding operations will receive a safety briefing for all affected job functions.

A track-type tractor with blade or a rubber tire loader will pick-up, and stock pile chips for temporary storage. Chips will be loaded out and hauled to a final disposal site as quickly as possible to reduce the threat of a fire. All appropriate fire protection measures will be established and maintained in accordance with the site management plan, site safety plan and City of Destin Task Order. Water trucks will be utilized to reduce the threat of fire from all types of debris. If necessary, water trucks will be utilized in fire suppression operations.

Debris Disposal

Debris disposal is the pre-planned, pre-approved operation of placing debris in approved disposition sites.

Debris disposal operations can be segmented into three distinct operations:

- Haul to and tip at debris disposal site.
- Physical operation of debris disposal site.
- Augmentation of debris disposal site permanent staff and equipment.

Disposal Site(s)

A disposal site may be a dump and/or a landfill owned and operated by private or public sectors.

Non-burnable debris will be disposed only at a dump and/or landfill designated to receive materials other than toxic hazardous waste.

Equipment

Debris disposal hauling equipment will include, but is not limited to:

- 16-30 cubic yard dump truck
- 30-100 cubic yard tractor-trailer or other such haulers as City of Destin may direct.

Past experience has shown that the farther the haul distance, larger capacity trucks are more effective. All haul truck beds will be equipped with tailgates constructed of materials (i.e. chain-link fence, safety fence, etc.) that will safely contain debris, allow each haul truck to be loaded to its capacity and also allow rapid dumping of debris from the bed.

Any haul truck bed that has or will have vertical extensions installed, will comply with the following restrictions:

- Disposal haul truck bed extensions will comply with all applicable local, state and federal laws.
- Bed extensions, when installed, will be located, and secured to the front-end, left side and right side of the bed.
- Bed extensions will not extend beyond 24 inches above the manufacturer's bed height. Bed extensions will be constructed of not less than 2"x6" lumber.

- All disposal trucks will be mechanically loaded and pre-measured and accepted by the City of Destin before being utilized in debris removal operations.

Maintenance/Fuel Vehicles and Personnel

Maintenance/fuel vehicles will be assigned and manned as needed to provide an adequate supply of fuel to maintain equipment operations. Maintenance/fuel vehicles will be assigned and manned as needed to provide all required field maintenance to ensure equipment operations.

Safety

All supervisors and/or foremen will utilize the check sheet provided by the assigned LGS Safety Officer to ensure all safety equipment is maintained and operable on all debris disposal hauling equipment and to ensure compliance with the Corporate Safety Plan.

Operations

All field supervisors will ensure that all debris disposal-hauling operators are licensed and/or certified to operate the required equipment. All debris disposal operators will be given area maps designating assignment/authorized areas of operations as well as transport routes designated and/or approved by City of Destin. All debris disposal haul operators will visibly display colored signs provided by LGS and, if applicable, City of Destin. LGS signs are weatherproof signs to be placed on the driver and passenger doors of the vehicle cab. Any signs provided by City of Destin will be displayed on both sides of the forward most section of the vehicle bed, unless otherwise directed by City of Destin Task Order/NTP.

All signs will be removed from the exterior of the vehicle at close of business each day and secured by the driver to prevent theft or loss. Signs will be replaced on the vehicle at the beginning of the workday. Colored paper signs/passes will be displayed on the driver's side windshield of each vehicle. The color of the sign/pass is subject to change, without notice, to ensure quality control measures regarding authority to exit work sites and enter disposal site(s).

All debris disposal haul operators will maintain the numbered debris hauling/transportation documentation/verification form(s). Each form contains directions, which should be followed. All supervisors will be responsible to ensure that all employees utilizing and/or inputting information on the form are procedurally trained. It will be each supervisor's responsibility to maintain a supply of the required number of forms. Forms will be distributed by supervisors/foremen to debris disposal haul operators during loading operations and after completing the applicable sections on the aforementioned documentation forms.

All debris disposal operators will maintain daily ticket/haul records to be turned into field supervisors, with copies of load tickets at close of business each day.

Management of HHW, HTRW, White Goods, E-wastes, Automobiles, Putrefied Foods, Tires, Gasoline, and Powered Tools

LGS Environmental Experience

LGS has experience with Hazardous Waste Storage and collection. LGS was contracted to develop a plan to handle household hazardous waste (HHHW) collection for City of Destin during a major storm event. Upon plan approval, LGS mobilized to collect the HHW from all areas of the city. LGS mobilized 85 technicians and all equipment necessary to carry out the plan, which involved approximately 46,000 residential structures. LGS established a collection point and command center to manage the event. Plans were implemented to complete a sweep of all affected areas of the city for the collection of HHW. Crews were equipped within 48 hours and mobilized to the collection area. LGS personnel created grids and mapped the areas for each crew to work daily. Crews were directed into various areas

of the city based on damage and debris recovery activities. Collection crews separated HHW from other debris and staged the segregated items for pick up. The entire affected area of the city was covered in one sweep and HHW was successfully kept out of the landfills used to handle organic debris. Contaminants included cyanides, acids, pesticides, hydrocarbons, hydrocarbon derivatives, bases, etc.

- White Goods: LGS has successfully completed numerous similar projects and is confident in our ability to perform the scope of work associated with this project. As with projects of this nature, it is essential to understand the health effects of the exposure to bacterial pathogens. Though similar to blood borne pathogens, many bacteria are difficult to visualize and are more easily transmitted through general contact. Often, individuals will fail to recognize the symptoms associated with bacterium exposures and consequently mistreat or mistake the symptoms as that of the common cold. However, individuals who fail to recognize the exposure may experience an extended recovery period and the conditions may grow more severe. All personnel that LGS will use in the completion of this project understand the effects of this type of exposure. LGS will evaluate and provide, as required, booster shots to prevent associated disease. (E.g. hepatitis)

- Health and Safety: LGS takes the health and safety of their employees seriously with a site health and safety plan being developed and approved for each project prior to mobilization. All of LGS' personnel working with hazardous materials have completed at least 40 hours of OSHA- required hazardous waste operations training per 29 CRFR 1910.120. LGS has also has a substance abuse policy and program in place, which meets or exceeds Government Requirements.

Household Hazardous Waste (HHW)

Household Hazardous Waste (HHW) is excluded from the definition of Hazardous Waste and therefore does not require the same collection or handling procedures as Hazardous Waste.

Acceptable Materials include, but are not limited to:

- Batteries
- Waste Oil
- Waste Fuels
- Paint
- Chemicals
- Antifreeze
- Pesticides
- Spray Cans
- Unidentified Liquids
- Household Cleaners

Mobilization and Site Set-Up

Within 8 hours of notification, LGS will mobilize a small strike team to include at least one Supervisor and two Technicians. This team will begin to set up the Staging and Segregation/Collection points. If needed, LGS can provide Media Brochures for educational purposes for residents listing acceptable waste, processes to be used by residents.

Mobilization of Additional Crews

Within 24 hours of notification, LGS will mobilize the segregation and collection crews, based on the size of the project/area crews will be working. This will include setting up grids and mapping for the collection crews. LGS can also provide Media Brochures for residents and or the Media.

Collection Points (To be identified by the KO)

Once the collection points are identified, LGS will set up/staging for the containment areas. The waste will be identified, labeled and segregated for disposal.

A Certified Hazardous Materials Manager (CHMM) will be on site receiving and segregating wastes, sorting to waste containers in accordance with the waste disposal contract. The CHMM will also make sure all waste containers are properly labeled, the area has warning signs and hours posted, track receipts, maintain a facility log, conduct storage facility inspections, limit access, maintain the site in a clean and orderly condition and always have hazardous waste clean-up ready and available at a moment's notice. The on staff CHMM will also make sure that the storage HHW is open seven days a week for a minimum of 8 hours per day. LGS will ensure that all regulations are followed.

Personnel will also establish, properly operate, and manage the HHW collections points as needed. Each site will be equipped with the proper safety equipment including a fire extinguisher, eyewash station, and spill response equipment.

Collection of HHW

Crews (1-truck, 2-technicians) will make passes through the affected areas. The crews will be assigned a mapped area in which they will make their sweeps. Once the team has a full load, they will return to the collection sites to off-load materials.

Collection of Other Materials

- Asbestos Containing Materials: LGS has the ability and licensed personnel to remove, package and dispose of known or suspect asbestos containing materials. If any suspect material is found, LGS has inspectors and certified personnel that can sample, remove, package and dispose of regulated-and non-regulated asbestos containing materials.
- Hazardous waste, biohazardous waste or other contaminated waste
- White goods containing Freon or chlorofluorocarbons (CFCs) (refrigerators, freezers, air conditioners, etc.)
- Cleaning/Staging White Goods containing Freon or CFCs
- Removal of Putrefied Foods from Warehouse or Commercial Stores
- Street Collection of Non-Freon White Goods
- Residential E-Waste, Small Tools, and Equipment

NEPA Compliance

The National Environmental Policy Act (NEPA) establishes national environmental policy and goals for the protection, maintenance, and enhancement of the environment. It also provides a process for the state to implement these goals. LGS will execute operations of its assigned tasks in a manner that will minimize any significant effect to the environment. LGS will provide information to assist in the environmental assessments, analysis, and impact statements required to support City of Destin disaster recovery operations.

LGS' plan for NEPA compliance includes, but is not limited to the following environmental issues:

Natural Environment

- Terrestrial Ecology
- Wetlands and Aquatic Ecosystems
- Coastal Zone Management

- Marine Mammals
- Plants (Natural and Invasive Species)
- Threatened and Endangered Species

Physical Environment

- Groundwater
- Surface water (lakes, streams, rivers)
- Soils
- Topography

Human Environment

- Air quality
- National Pollutant Discharge Elimination System (NPDES) – Storm water runoff
- Land use – Zoning
- Demographics
- Cultural and historical resources
- Environmental Liability

Disaster Debris Reduction Methods

LGS, as described above, will follow our BMP in reducing all disaster generated debris to capitalize on the potential for recycling and beneficial reuse. Our team has specialized equipment and demonstrated capability to manage difficult debris reduction operations.

Recycling of Disaster Generated Debris

LGS will implement our BMP for the diversion of recyclable material generated from events from within the waste stream to the extent possible that does not negatively impact the recovery effort.

The degree of separation and recycling depends on the urgency to clean areas to facilitate recovery and protect the health and safety of the community. We will consider the following issues in making recommendations to City of Destin on recycling operations:

- Quality and quantity of debris.
- The existence and proximity of local recycling programs available.
- The availability of wider markets (large quantities may overwhelm local markets) and practical end-uses and the logistics of moving large quantities that may be generated.
- Politically or practically necessary exigency of the recovery effort on the Government's priority of recycling.
- Cost associated with the separation and segregation of recyclable materials.

LGS has vast experience in recycling debris and is operationally prepared to do so. Following an event, a key individual is identified on the LGS team (the Recycling and Beneficial Reuse (RBR) Manager) who has the responsibility and authority to:

- Act as a liaison with the City of Destin QA/QAS and environmental specialists for compliance with the City of Destin Environmental Operating Principles to determine a strategy to meet goals and principles of the Resource Recovery Act of 1970 (Public Law 91-512), the Resource Conservation and Recovery Act (RCRA) (42 U.S.C. 6901, et seq) specifically Subtitle D, Section 4001-4010 (Solid Waste Disposal Act) and ISO 14001.
- Educate employees and subcontractors on the BPM.

- Determine processes at initial point of contact (curbside segregation) and assist with Public Information Plan.
- Identify locations and processes at Temporary Debris Storage and Reduction Sites (TDSRS).
- Identify recycling and beneficial reuse markets both local and outside the AO.

The type and degree of event will dictate the quality and type of recyclable material. The material that may be recycled and its beneficial reuses are:

- Asphalt: Can be recycled to new asphalt pavement or reused as clean fill on or off site if regulations allow.
- C & D: Divert as much as possible from this category with metals being smelted and other materials segregated for recycling or disposal.
- Concrete/Aggregate: Crushed concrete, rubble, masonry can be used as an aggregate for base or fill material. Larger sections of concrete can be used as materials for reefs, to armor shorelines and for bank stabilization for erosion control (Riprap).
- Soils and dirt fines: Screening debris at the TDSRS reduces the number of fines that would be deposited in landfills and reduce transport and disposal costs. This application may not be practical and may only be done in extreme cases after close coordination with City of Destin.
- E-Waste: Will be collected separately at the curbside and brought to the TDSRS for packing znd labeling in one cubic yard boxes or shrink-wrapped on pallets for transportation to a recycling facility.
- Metal: Recycle by selling scrap to dealer who will smelt the metal for reuse.
- Roofing Materials: Can be used as an aggregate in asphalt pavements. Must be free of asbestos.
- White goods: Separated at the curbside and transported to the TDSRS or direct to metal recyclers. Freon is to be extracted and recycled while putrid waste will be removed and disposed of in landfills or compost facilities if available and there are no health risks. White goods to be transported to recycling facility.
- Vegetative Material: Material can be reduced by grinding and chipping. The mulch can be used as a fuel in biomass boilers/cogeneration plants, as a soil enhancement in agricultural applications and commercial resale (composting). Mulch used in agricultural applications must be free of paper, plastics and dirt (ten percent or less contamination). There is a benefit to solely reducing the material as it has a decreased impact on the landfill. The material can also be burned, and the ash utilized for soil enhancement in agronomic applications. Further, mulch can be used in land applications as a stabilizer or for erosion control. Additionally, there are emerging technologies that may allow for ethanol production from this material as well.
- Tires: Segregate tires at curbside for transport to TDSRS for storing. Transport bulk to recycling facility for use as material in asphalt, floor tiles, hoses, landscaping material, playground material and countless other applications. Tires can also be used as fuel supplement in waste-to-energy facilities.

The differing waste streams will be segregated at the curbside, residential drop off sites and at a TDSRS. Source segregation is instrumental to avoiding contamination via comingling waste streams and increasing product marketability.

- Curbside Segregation: The LGS "Picking Up the Pieces" guideline is ideal for educating residents in the different types of debris and how to segregate those at the curbside. LGS has the capability to segregate debris at the curbside. Hand salvaging will yield more recyclable materials, although time required to do so may be more than mechanical sorting. By using specialized trailers with individual bins, HHW can be collected curbside and kept out of the waste stream. Some HHW may be recyclable (e.g. paint, batteries, compressed gas) while other materials have to be disposed of pursuant to local, state and federal law. LGS' teaming partner has years of experience where these were core business processes of the company.
- Debris Segregation Crews: LGS will deploy Debris Segregation Crews (DSC) to maximize curbside segregation. The crew composition is outlined above. Each DSC will have the tools and PPE/safety to perform these tasks quickly, efficiently, and safely.

- Residential Drop-off Sites: By providing residents with a drop off site, debris can be more easily segregated with bins and containers for specific materials. This supplements other programs and also reduces

transportation expenses while providing proactive residents the ability to clean up on their schedule. This also tends to enhance public relations by providing residents with alternatives.

- Sufficient CQC monitors would be stationed at the sites to ensure that only eligible debris would be accepted. LGS will work with City of Destin and local officials to encourage drop off and first stage segregation of material.

- TDSRS: Segregating debris at the curbside will significantly improve the overall reduction capability at the TDSRS. By further segregating debris at the TDSRS, resources can be concentrated in the segregation process. The segregation will be performed in a location that is away from the general public and can be customized for expediting this process. Although segregation is more difficult to achieve as the debris has been co-mingled by the time it arrives at the TDSRS certain materials can be recycled prior to ultimate disposal (e.g. ferrous and non-ferrous metals, etc.) Spotters will be used at the TDSRS but only as a last line of defense.

Once the salvageable material has been removed, the remaining debris will be reduced and brought to a landfill for disposal.

To improve the efficiency of source separation and overall recycling success of the mission, LGS will assist City of Destin with a Public Information campaign utilizing Public Service Announcements (PSA) that encourages residents to properly place and separate debris at the curb for contractor pickup. Following are the anticipated debris categories:

Household Garbage; C&D; Vegetation; HHW; White Goods; Electronics; Unexploded Ordinance; Metals and Other. The PSAs will have subcategories with examples of items to assist the public in understanding how different items are categorized and segregated.

If any collection crews identify unexploded ordinance, ammunition, weapons, or explosives (UXO), they will immediately stop work and notify their CQC Site Manager. The CQC Site Manager will immediately identify the UXO, quarantine the area, remain on site and notify the following authorities:

Bureau of Alcohol, Tobacco, and Firearms (ATF):

- (800) ATF-GUNS
- (800) 283-4867

Once the CQC Zone or Sector Manager arrives on site they will release the crew to continue work and stand-by until the authority having jurisdiction (AHJ) arrives.

Asbestos Containing Material (ACM)

Known or suspected asbestos containing material will be segregated from other debris and disposed of by a licensed asbestos contractor. Asbestos containing materials will be disposed of in a landfill licensed to accept and dispose of asbestos containing materials. Materials that should be segregated include but are not necessarily limited to floor tiles, roofing shingles, linoleum, ceiling tiles, transite (exterior) shingles, concrete or flooring covered with mastic or flooring adhesive, pipe and/or boiler insulation, ceiling and/or wall texture, and stippled or blown on surfacing materials.

Looks Great Services, drawing from our corporate diversity, will apply four decades of aggregate materials handling, solid waste handling and recycling and disaster debris management experience in multiple major disaster declarations to execute the required tasks. We have managed simultaneous operations over large geographical divides in multiple states. Our culture of safety has supported us maintaining an Experience Mod Rating of .76. We

will respond, we will execute, and we will meet the requirements as defined in this solicitation. We have the letters of recommendation and reputation to prove it.

Pre-Planning

Prior to commencing debris removal operations and within 48 hours, or as required in the Task Order, Looks Great Services of MS, Inc. (LGS) will submit to the City of Destin the Contractor Quality Control and Operations Plans which describe the organizational structure and additional key personnel involved in the cleanup, the technical approach and methodology to be used, site specific operational components, the specific geographical area management, the LGS Site Specific Health and Safety Plan (SSHSP), Accident Prevention Plan (APP), Activity Hazard Analysis (AHAs), a copy of the LGS Quality Control Plan (CQC), and approaches to waste reduction and recycling through Beneficial Re-Use, all specific to the Task Order and Area of Operations (AO). The Plan will indicate where operations will begin and which streets/roads will be cleared during the initial period though submission of a 2, 7- and 14-day plan. Operation locations will be decided upon and in conjunction with the City of Destin

The Contractor Quality Control and Operations Plans will be updated by the LGS Operations Manager and CQC System Manager as necessary and as required by the City of Destin. LGS' final Contractor Quality Control and Operations Plans will include organizational structure and key personnel involved in the cleanup, updated technical approach and methodology to be used, updated site-specific operational components, updated specific geographical area management, updated SSHSP, updated APP, updated AHAs, updated CQC, and updated approaches to waste reduction and recycling through Beneficial Re-Use. The plan will also include continually updated submissions of 2, 7- and 14-day plans, all specific to the Task Order and AO as well as work to be performed by subcontractors, a comprehensive list of subcontractors at each tier, and measures to be taken by LGS and its subcontractors to control hazards associated with services performed, and materials or equipment utilized.

During implementation of services, LGS will attend all meetings convened by the City of Destin with respect to the response effort, when directed by the City of Destin to do so or otherwise necessary to carry out the work. The KO may/will issue subsequent TOs to mobilize and begin Emergency Road Clearance, Debris Removal from Public Roads, Streets and ROWs and Hauling to Debris Management or Final Disposal Sites, Vegetative Debris Reduction at Debris Management Sites (TDSRS) including site management, Final Disposal of Reduced Chips, Testing of Ash and Disposal at Landfill, Removal of Freon Containing White Goods, Removal of Non-Freon Containing White Goods, construction of an Inspection Tower(s), construction of a Hazardous Waste Containment Area(s), deployment of Household Hazardous Waste Separation and Removal Crew(s), activation of Debris Separation Crew(s), and activation of Search and Rescue Support Crew(s) and /or HTRW Separation Crew(s).

Mobilization Plan

Looks Great Services of MS, Inc. has developed a comprehensive Mobilization Plan to ensure immediate, organized, and effective deployment of resources in the event of a disaster affecting the City of Destin. Our approach prioritizes speed, safety, compliance, and clear communication, enabling us to begin critical debris management operations within hours of a disaster declaration.

Upon issuance of a Notice to Proceed or activation of the contract, Looks Great Services will initiate mobilization according to the following phases:

Initial Activation and Deployment (Within 24 Hours)

- Notification of key personnel and pre-designated response teams.
- Mobilization of supervisory staff, field managers, safety officers, and project coordinators to the City of Destin.
- Establishment of a command post and coordination center in or near the city to facilitate operational oversight and direct communication with city officials.

- Deployment of initial equipment fleets, including chainsaws, loaders, grapple trucks, bucket trucks, and debris hauling vehicles, to designated staging areas.
- Coordination with the City's Emergency Operations Center (EOC) and public works leadership for situational updates and operational priorities.

Emergency Road Clearance Operations (Within 72 Hours)

- Immediate deployment of crews and equipment to clear critical roadways, emergency routes, and access points to hospitals, fire stations, police departments, and other vital infrastructure.
- Documentation of clearance activities for FEMA compliance through GPS-enabled devices, photographic records, and real-time reporting to the city's designated representative.
- Prioritization of clearance efforts based on the City's pre-identified priority routes and critical infrastructure map.

Full Debris Removal Mobilization (Within 3-5 Days)

- Deployment of full workforce and equipment complement, including additional hauling units, loaders, excavators, skid steers, and debris monitoring teams.
- Establishment and operationalization of approved Temporary Debris Management Sites (TDMS), including site setup, environmental controls, signage, staffing, and operational protocols.
- Activation of subcontracted or supplemental crews (if necessary and pre-approved) to scale operations based on event severity and debris volumes.

Support Functions

- Mobilization of drone teams for aerial video and imagery surveys to support damage assessments, debris volume estimates, and documentation.
- Deployment of safety officers to monitor field activities, enforce compliance with OSHA, FEMA, and City of Destin safety requirements, and ensure zero-incident operations.
- Establishment of administrative and documentation teams to handle FEMA Public Assistance documentation, work order tracking, billing, and recordkeeping.

Sustained Operations and Flexibility

- All mobilized assets and personnel will remain on standby or operationally active until the City of Destin's debris management goals have been achieved.
- Our plan allows for the scalable addition of resources to meet changing conditions, including expanded geographic areas or debris volumes resulting from additional storm events or assessments.

The Mobilization Plan ensures that the City of Destin will benefit from rapid deployment, seamless coordination, and efficient debris management operations that meet all federal, state, and local requirements. Our commitment is to restore access, safety, and community normalcy as quickly and effectively as possible.

Training Plan

Looks Great Services of MS, Inc. is committed to maintaining the highest standards of safety, compliance, and operational efficiency through a comprehensive training program designed specifically for the City of Destin's Disaster Debris Management Services Project. Our training plan ensures that all personnel are properly trained, qualified, and prepared to execute their roles in accordance with federal, state, and local requirements, including FEMA guidelines, OSHA standards, and City of Destin policies.

Training Objectives

The primary objectives of our training plan are to:

- Ensure the safety of all workers, city staff, and the public during debris management operations.

- Achieve full compliance with FEMA Public Assistance Program requirements for eligibility and documentation.
- Provide personnel with the skills and knowledge needed to perform their duties efficiently and professionally.
- Promote environmental stewardship, quality control, and accountability in all phases of debris management.

Training Scope and Content

All personnel assigned to the project will participate in the following training modules:

- **General Safety Orientation**
  - OSHA compliance (29 CFR 1910 and 1926)
  - Personal protective equipment (PPE) requirements
  - Hazard recognition and mitigation
  - Emergency action procedures and first aid response

- **Debris Management Operations Training**
  - FEMA 325 Debris Management Guide overview
  - Eligibility requirements for debris removal, reduction, and disposal
  - Documentation and recordkeeping procedures for FEMA reimbursement
  - Right-of-Way (ROW) and Right-of-Entry (ROE) debris removal protocols
  - Temporary Debris Management Site (TDMS) operations and safety

- **Equipment Operation Training:**
  - Safe operation of loaders, excavators, grapple trucks, chippers, and other heavy equipment
  - Equipment inspection and maintenance procedures
  - Operational safety near utility lines, rights-of-way, and public spaces

- **Hazardous Materials and Waste Handling:**
  - Identification and handling of hazardous trees (leaners, hangers), stumps, and structural debris
  - Household Hazardous Waste (HHW) identification and packaging procedures
  - White goods management, including refrigerant removal and certification compliance

- **Specialized Training Modules:**
  - Aerial drone operation and FAA compliance for personnel involved in aerial imagery and video documentation
  - Environmental protection measures, including erosion control, waterway debris handling, and sand screening best practices

Training Delivery

Training will be conducted using a combination of classroom instruction, field demonstrations, toolbox safety meetings, and on-the-job mentoring. Training sessions will be delivered by qualified trainers, including safety professionals, project supervisors, and third-party certified instructors as required. All training will be documented with attendance rosters, training materials, and certificates of completion maintained on file for verification by the City of Destin and FEMA auditors.

Key delivery methods include:

- Pre-mobilization group training prior to deployment
- Daily tailgate safety meetings addressing specific jobsite hazards and operational focus
- Ongoing refresher training and updates as project conditions or requirements evolve

Personnel Training Requirements

All field personnel, equipment operators, supervisors, and administrative staff will complete their assigned training prior to mobilization. Any newly hired or reassigned personnel will undergo the same training before being authorized to work on the project. Site-specific safety orientations will be provided upon arrival at any new worksite or TDMS location.

Quality Control and Continuous Improvement

Looks Great Services will continuously evaluate the effectiveness of its training program through direct observation, performance assessments, incident investigations, and feedback from field personnel. Corrective actions, supplemental training, or procedural changes will be implemented promptly if deficiencies or improvement opportunities are identified.

Documentation and Compliance

All training records, certifications, and qualifications will be maintained and made available to the City of Destin, FEMA, and other regulatory agencies upon request. Our documented training program ensures compliance with federal disaster recovery program requirements and supports audit-ready recordkeeping.

Quality Assurance/Quality Control

Overview

Responsibilities for quality are specified not only for compliance with policies and procedures but also so that decisions are based on principles that ensure quality. Documented responsibilities ensure that expected behaviors are communicated throughout the company rather than left to discretionary interpretation. Every necessary action is taken to ensure that the quality program is not a “process” but is, instead, focused on delivery of quality service for the client.

Looks Great Services Quality Policy

Quality is everyone's responsibility. LGS senior leadership holds everyone in the organization personally accountable for adhering to the LGS Quality System policies and procedures. The LGS Quality Policy describes the LGS commitment to quality and reinforces compliance with the Quality System. LGS senior leadership communicates the Quality Policy message throughout the company so that all employees understand their respective quality responsibilities. LGS senior leadership reviews the LGS Quality Policy with all employees at least annually. LGS ensures the LGS Quality Policy is distributed to all employees and is posted in all offices. Responsibility for the CQC program extends from the President down through every organizational element

Quality Duties, Responsibilities, and Line of Authority

President: Quality Duties, Responsibilities, and Authority

While everyone is responsible for quality, the President is the one person in the company ultimately responsible for quality. Regardless of other duties, quality responsibilities of the President include:

- Ensuring each employee understands his/her quality responsibilities as well as LGS quality policies
- Establishing company quality policies and objectives
- Conducting management reviews of the LGS Quality System

- Ensuring the availability of necessary resources and information for effective operation of the Quality System
- Demonstrating commitment to the LGS Quality System and its integrity
- Ensuring achievement of LGS quality objectives
- Continuously improving the Quality System

CQC System Manager: Quality Duties, Qualifications, Responsibilities, and Authority

The CQC System Manager is responsible for ensuring the overall effectiveness of the Quality System for a specific project. Regardless of other duties, the CQC System Manager is responsible for:

- Planning project quality controls required by the LGS Quality Systems and contract requirements
- Fully implementing all provisions of the LGS Quality System and related documents on the project.
- Overall management of the operation of the LGS CQC Plan on the project.
- Implementing and managing all phases of quality control
- Communicating project-specific quality requirements to all affected departments, subcontractors and suppliers, employees and customers
- Ensuring that the CQC Plan is established and implemented by persons doing work that impacts quality.
- Monitoring progress of activities
- Ensuring that the Quality System is maintained.
- Acting as the project quality liaison with parties outside the company on matters relating to quality
- Reporting to senior management on performance of the CQC Plan, including needed improvements
- Review and approval of all project CQC Plan records.
- Review and approval of project quality-related contract submittals.
- Managing all project inspection and quality control activities
- Controlling and managing corrective actions
- Resolving quality nonconformance issues
- Ensuring ongoing training activities are being addressed during weekly safety and CQC tailgate meetings with the workforce by Area, Sector, Zone and Site Managers
- Providing daily CQC Reports to the Contracting Officer (the City of Destin KO). Daily reports will be submitted electronically, or in hard copy, to the KO no later than 0700 on the following day, with each report addressing the full 24-hour period of removal, reduction, and disposal operations.

The CQC System Manager has the authority to:

- Act in all CQC Plan matters for LGS.
- Stop work when continuing work may adversely affect quality or cover up a defect.
- Prevent the use of materials that may adversely affect quality or cover up a defect.
- To direct the removal and replacement of any non-conforming work or material by LGS, any subcontractor, or any supplier.

- Suspend work and/or supply of materials by any staff member, subcontractor personnel, or supplier as deemed necessary to assure quality results.

Alternate CQC System Managers acting in the role of the project CQC System Manager have the same quality duties, responsibilities and authority as the project CQC System Manager. An alternate for all CQC System Managers will be named. Qualifications for appointment as LGS' CQC System Manager (or alternate) include a minimum of three years' experience in debris removal with a focus on quality control operations.

CQC Area (Division) Manager: Quality Duties, Qualifications, Responsibilities, and Authority

The CQC Area Manager is the one person responsible for management of a specific state, county or group of sectors depending on the size of an event as defined in the Geographical Area Management Plan. The CQC Area Manager will report to the CQC System Manager and will be responsible for all CQC activities within the assigned area. Regardless of other duties, the CQC Area Manager is responsible for:

- Demonstrating commitment to the LGS Quality System and its integrity
- Ensuring achievement of project quality objectives
- Providing adequate resources for effective operation of the CQC Plan on the project
- Ensuring that each design employee understands his or her quality responsibilities as well as LGS quality policies.
- Ensuring that each project employee understands his or her quality responsibilities as well as LGS quality policies.
- Conducting management reviews of the CQC Plan
- Ensuring the availability of necessary resources and information for effective operation of the CQC Plan
- Managing safety briefings and updates, as well as providing LGS quality control updates to the area workforce during weekly tailgate meetings.

The CQC Area Manager has authority to:

- Stop work when continuing work adversely affects quality or covers up a defect.
- Prevent the use of materials that would adversely affect quality or cover up a defect.
- Suspend work and/or supply of materials by any staff member, subcontractor personnel, or supplier as deemed necessary to assure quality results.

Alternate CQC Area Managers acting in the role of the project CQC Area Manager have the same quality duties, responsibilities, and authority as the project CQC Area Manager. An alternative for all CQC Area Managers must be named. Qualifications for appointment as LGS' CQC Area Manager (or alternate) include a minimum of two years' experience in debris removal with a focus on quality control operations.

CQC Sector and Zone Managers: Quality Duties, Responsibilities, and Authority

CQC Sector and Zone Managers verify that work performed by subcontractors and suppliers and LGS work crews conforms to LGS quality standards. The President appoints one or more CQC Sector or Zone Managers for each project. The CQC Sector and Zone Managers will have responsibility over all CQC activities within a defined Sector or Zone. Sector Managers report to the Area Manager. Zone Managers report to the Sector Manager.

CQC Sector and Zone Managers have specific responsibilities for:

- Ensuring that work meets government regulatory and code requirements, customer requirements, contract requirements, contract technical specifications, contract drawings, approved contract submittals, and company quality standards and specifications.
- Ensuring that subcontractors and suppliers begin work in accordance with LGS start-work policies
- Ensuring that subcontractors and suppliers receive a notice to work only when conditions will not adversely affect quality results.
- Conducting Sector or Zone quality inspections, tests, and recording findings on the RaFT System
- Accurately assessing subcontractor quality and on-time performance
- Ensuring that quality standards are achieved before approving subcontractor or work crew completion of work.
- Managing Sector or Zone safety updates and briefings, as well as LGS quality control progress reviews, with workforce at weekly tailgate meetings

The CQC Sector and Zone Managers have the authority to:

- Stop work when continuing work may adversely affect quality or cover up a defect
- Prevent the use of materials that may adversely affect quality.
- Direct the removal or replacement of any non-conforming work or material.
- Suspend work and/or supply of materials as deemed necessary to assure quality results.

Alternate CQC Sector and Zone Managers have the same quality duties, responsibilities, and authority as the CQC Sector or Zone Manager. Multiple CQC Sector and Zone Managers may be assigned to the project.

CQC Site Manager

A CQC Site Manager verifies work performed by subcontractors and suppliers and LGS work crews conforms to LGS quality standards. The President appoints one or more CQC Site Managers for each site. The CQC Site Manager may be located at a disposal site, reduction site, curbside separation site, debris loading site, a demolition site, or other sites that require CQC. The CQC Site Manager is someone at the site location that is normally required to be there but has added CQC responsibilities. The CQC Site Manager is responsible for all CQC activities at their site location including reporting via the RaFT System. CQC Site Managers must complete separate, specialized training for debris loading, separation, reduction, and disposal sites, and those dealing with Household Hazardous Waste (HHW), and Hazardous, Toxic, and Radiological Waste (HTRW) activities.

A CQC Site Manager has specific responsibilities for:

- Ensuring that work meets government regulatory and code requirements, customer requirements, contract requirements, contract technical specifications, contract drawings, approved contract submittals, and company quality standards and specifications.
- Ensuring that subcontractors and suppliers begin work in accordance with LGS start-work policies
- Ensuring that subcontractors and suppliers receive a notice to work only when conditions will not adversely affect quality results.
- Conducting quality inspections, tests, and recording findings
- Accurately assessing subcontractor quality and on-time performance
- Ensuring that quality standards are achieved before approving subcontractor or work crew completion of work.

- Manage site safety meetings and briefings, as well as LGS quality control progress, with site workforce during weekly tailgate meetings.

The CQC Site Manager has the authority to:

- Stop work when continuing work may adversely affect quality or cover up a defect.
- Prevent the use of materials that may adversely affect quality.
- Direct the removal or replacement of any non-conforming work or material.
- Suspend work and/or supply of materials as deemed necessary to assure quality results.

Alternate CQC Site Managers have the same quality duties, responsibilities, and authority as the CQC Site Managers. Multiple CQC Site Managers may be assigned to the project.

All Employees: Quality Duties, Responsibilities, and Authority

All employees have quality responsibilities, all employees will be educated on what CQC means in the context of the project and their individual responsibility ensuring delivery of quality service. It will be clear that these responsibilities include:

- Conformance to project quality requirements
- Compliance with the project quality plan
- Meeting or exceeding all applicable regulations, codes, industry standards, and manufacturer specifications as well as meeting or exceeding our customers' contract and individual requirements.
- Fully implementing and complying with all provisions of the LGS Quality Manual.

The LGS CQC employee education and orientation will ensure that all employees understand that they have the authority to:

- Stop work when continuing work may adversely affect quality or cover up a defect.
- Prevent the use of materials that may adversely affect quality.

Specialized CQC Personnel

In addition to CQC Personnel specified elsewhere in the contract, LGS will provide as part of the CQC organization specialized personnel to assist the CQC System Manager for the following areas: separation, removal, and disposal of household hazardous waste (HHW), and Hazardous, Toxic, and Radiological Waste (HTRW) activities and/or biological wastes when these materials are present. These individuals may be employees of the prime or subcontractor, will be responsible to the CQC System Manager, and will be physically present at the debris removal, reduction, and disposal operations site during work on their areas of responsibility. These individuals may perform other duties but must be allowed sufficient time to perform their assigned quality control duties as described in the Quality Control Plan.

LGS has established relationships with specialists in HHW and HTRW response. As part of our CQC plan, LGS encourages, and has in past operations, requested co-locating at TDSRS sites with the US EPA, state and local regulators and their contractors to foster solid working relationships and access to decision makers which enables best value for addressing issues of paramount importance. Specialized CQC Personnel must participate, and often assist in training, the workforce and CQC personnel assigned to dealing with Household Hazardous Waste (HHW), and Hazardous, Toxic, and Radiological Waste (HTRW) activities.

Quality System Performance Measures

Company-wide quality performance measures evaluate the effectiveness of the Quality System. The following indicators are the primary measures of quality performance:

- Number of customer correction items identified at the project closeout quality inspection.
- Customer satisfaction feedback.

At least annually, senior managers evaluate LGS quality performance and set improvement goals. CQC performance will be reviewed monthly in the review and analysis of project performance by the senior leadership of LGS.

Customer Satisfaction Performance Measures

LGS will seek out feedback after project completion on whether customer quality expectations are being met, and to what extent. The President analyzes customer satisfaction data to determine opportunities for improvement and address any items of customer dissatisfaction. CQC performance assessments will be a key element in the frequent liaison and assessment with the City of Destin operating personnel and other stakeholders.

Exceptions; Noncompliance Issues

Exceptions to the LGS CQC Plan and customer contract requirements are tightly controlled:

- Exceptions to compliance with contract specifications are approved only by the customer and the CQC System Manager.
- Exceptions to the LGS Quality System not specified by contract requirements are approved only by the LGS President or the senior CQC System Manager.

Exceptions are recorded in memoranda, change orders (Section 3.4.6 Change Order), or otherwise clearly documented.

CQC Plan Noncompliance issues are of paramount importance as payment for any period of noncompliance can be reduced under the contract. LGS recognizes and understands that if the the City of Destin Quality Assurance (QA) program determines LGS is in noncompliance with the accepted CQC Plan and contract requirements for CQC, the Government may/will reduce LGS' payment for the period of nonconformance in accordance with the contract's performance based contracting pay table. Furthermore, we recognize and understand that the Government may require removal of key CQC personnel, resubmittal of the LGS CQC Plan, and an additional mutual understanding meeting with LGS to establish and implement corrective measures deemed necessary to bring the LGS CQC program back into contract compliance. Excellence in execution is a pivot point in the relationship with the City of Destin. The CQC program must and will reflect the excellent performance that LGS will deliver because we have a comprehensive and outstanding process and a superb CQC training and management program.

Debris Eligibility Criteria

The LGS Quality Control Plan enforces the guidelines for debris eligibility established in FEMA 321, FEMA 322, FEMA 325, FEMA 327, FEMA 329, FEMA 9500 Series Policy Publications, DHS OIG-11-40, or as defined and directed in a specific Task Order and Notice to Proceed. Generally, this means full FEMA compliance. The CQC System Manager will work closely with the the City of Destin QA/QAS teams to ensure that all work is compliant, and all documentation is properly obtained and documented to the client, as required by the contract.

While Quality Control is the duty of each employee, one member of each crew is trained and specifically assigned the responsibility as CQC Site Manager for properly determining eligibility of debris and by what authority debris is eligible for removal. Every pile of debris collected is required to be evaluated as part of LGS' CQC Plan. By automating

LGS' CQC Plan with the RaFT System, LGS is able to provide unmatched service and documentation to the debris collection process. In addition, deploying the RaFT System for CQC Plan compliance provides real time automation to the quality control process. This enables LGS to immediately address questions remotely, based on photographic evidence uploaded in real time to our servers for web access by LGS CQC Managers and the the City of Destin QA/QAS. To accomplish this, the RaFT System is integrated into a web-based server platform and iPad field data input system.

Each crew will have iPads operated by the CQC Site Manager that transmits each entry in real time when cell phone service has been restored. When cell phone service is not restored, we are able to upload each CQC Site Manager's entries daily to provide an optimal performance from our CQC Plan when the iPads are within proximity of the LGS Management Level Mobile Command and Communications Center (MCC), or any Support Level MCC.

Benefits include quick review of "judgment calls" made in the field. LGS is capable of not only discussing by cell phone, but also reviewing photographs to assist our crews and CQC Site Mangers in making the right decision the first time, each time, in real time. In addition, LGS is able to provide immediate review potential for the the City of Destin QA/QAS personnel to also remotely respond to questions that arise. This gives our CQC Plan a real time application. It also provides LGS with an opportunity to relay details of decisions made by the the City of Destin QA/QAS personnel in real time across the entire Area of Operations (AO) for consistent application of decisions and directives. By implementing the RaFT System, LGS can ensure performance of debris removal, reduction, demolition, and disposal that complies with FEMA and contract requirements.

Documentation

LGS will maintain daily current records providing factual evidence that required quality control activities have been performed via the RaFT System as well as hard copies. These records will include the work of subcontractors and suppliers. Records will be on an acceptable form that includes, as a minimum, the following:

- LGS/Subcontractor and their area of responsibility
- Operating plant/equipment with hours worked, idle, or down for repair
- Work performed each day, giving location, description, and by whom
- Test and/or control activities performed with results of such identified
- Quantity of materials received at each site with statement as to the disposition of these materials (i.e. Hauled, reduced, recycled, landfilled, etc.)
- Job safety evaluations based on activity hazard analyses, stating what was checked, results, and instructions or corrective actions taken
- Instructions given/received and conflicts with approved plans and/or specifications

These records will include a list of subcontractors working on the project; the number of personnel working; weather conditions encountered; and any delays encountered. The original and one copy of these records in report form will be furnished to the Government daily, except that reports need not be submitted for days on which no work is performed

Reports will be signed and dated by the CQC System Manager. Daily reports will be submitted to the KO no later than 0700 on the following day. Each report will address the full 24-hour period of removal, reduction, and disposal operations.

CQC Plan Deliverables

LGS will deliver within three (3) days after receipt of the Notice to Proceed our CQC Plan in detail as outlined in the solicitation. Prior to acceptance, LGS President and appointed CQC Area Managers, CQC Sector Managers, CQC Zone

Managers, CQC Site Managers and all CQC Specialized Personnel will join in a Coordination Meeting with the the City of Destin QA staff and the KO to reach mutual understanding regarding any details. Any changes after LGS' CQC plan are delivered will require notifying the KO in writing and be subject to approval.

Details to be addressed in deliverables include Identifying CQC personnel, identifying CQC procedures, and identifying control methods. At a minimum, deliverables will include:

- A complete description of the quality control organization, including an organization chart showing lines of authority. This will include appropriate LGS points of contact for the CQC System Manager and the Area, Sector, Zone and Site managers. It will also include the name, qualifications, duties, responsibilities, and authorities of each person assigned a CQC function. This will include qualifications in resume format for the CQC System Manager, and all Area and Sector Managers. Proof of training for Zone and Site Managers will be submitted to the Contracting Officer.
- A copy of the letter to the CQC System Manager signed by the President of LGS which describes the responsibilities and delegates sufficient authorities to adequately perform the functions of the CQC System Manager, including authority to stop work which is not in compliance with the contract. The CQC System Manager will issue letters of direction to all other various quality control representatives outlining duties, authorities, and responsibilities. Copies of these letters will also be furnished to the City of Destin.
- Safety: The safety section of the CQC Plan will address worker protection, equipment safety, trimming of loads, flagmen, work zone safety and traffic control.
- Debris Eligibility: The debris eligibility section will address what debris is eligible for removal versus what should not be removed. A protocol will be provided for obtaining decisions on questionable debris.
- Separation/Handling of Curbside Debris: This section will provide guidance on curbside debris separation and removal concerning HHW, white goods, e-waste, and other materials as tasked.
- Proper Loading/Unloading of Trucks: This section will provide instructions on properly loading trucks to ensure full loads, ensure mixed debris loads are kept to a minimum, ensure tailgates are secure and placards are clearly displayed, Freon systems in the white goods remain intact, and extension boards on the dump bodies are maintained according to specifications. Trucks using TDSRS sites will be inspected to ensure loads are fully dumped.
- Tracking of Hourly Rate Task: This section will outline in detail the appropriate procedures and forms required to track and account for equipment hours, equipment down-time, and man hours. The procedures will be in accordance with the contract scope and must be approved by the government prior to use. The government and LGS will reconcile hours documented at the end of each day.
- Private Property Debris Removal: This section will explain the requirements that must be in place prior to removing debris from private property and define personal property and how it will be handled. This section will include guidance on stumps, hanging limbs, and leaning trees if tasked.
- Demolition: This section will explain the requirements that must be in place prior to performing structure demolition on private property or public property. This section will also define personal property and how it will be handled along with other special items of interest as defined by specific task orders.
- Daily reports: This section will address reporting procedures, including proposed reporting formats and a schedule for submission of the daily summary reports that capture the main activities of the day. The reports will include the CQC notes documenting the activities monitored each day. For example, activity description and locations, times of inspections, problems with safety, total number of trucks loaded, total number of loads and quantities hauled to reduction/disposal sites, quantity of debris reduction, number of subcontractors working, incidents of contract non-compliance, and corrective actions, if any, will be reported.
- Training Materials: The LGS developed training materials will be submitted with the CQC Plan for review and comment by the Government. LGS will schedule and provide within three (3) days of receipt of Notice

to Proceed a one-day training session for all CQC personnel, Government Area and Resident Engineers, and QA Supervisors. Additional training sessions will be scheduled and conducted when required by task order.

LGS will update the CQC Plan and submit it for Government approval with each addition of a major scope element to ensure compliance with task order provisions. The update will be submitted within 48 hours of issuance of the new task order, or a contract change that necessitates a change to the CQC plan.

Physical Identification of CQC Personnel in the Field

LGS' CQC personnel performing quality control functions in the field will be easily identified visually. At a minimum, the letters "Q" and "C" will be displayed on the back of the hard hat with two, two-inch-high, black capital letters. LGS may elect to utilize other means of visual identification in addition to the letters on approval by the Area Engineer and inclusion in the CQC Plan.

Tab 5 – Previous Experience

Large-Scale Past Performance

Since 2001 LGS has been involved in FEMA reimbursed projects. LGS works in compliance with the law, the regulations, and FEMA's codified policies regarding the FEMA Public Assistance (PA) Program. Below is a list of the individual FEMA contracts LGS has managed as the prime contractor that involved more than 250,000 CY of debris removed in the past 10 years.

PROJECT	DATE	TOTAL CY	TOTAL DOLLAR AMOUNT INVOICED	FEDERAL REIMBURSEMENT AMOUNT	CONTACT
Toombs County, GA DR-4830-GA	9/26/2024 – Present	2,500,000 (to date)	$71,155,556.00 (to date)	TBD	John Jones, County Administrator jjones.toombsco@bellsouth.net 912-526-3311

PROMISSORY NOTE AND SECURITY AGREEMENT

(Commercial - Revolving Draw)

DATE AND PARTIES. The date of this Promissory Note and Security Agreement (Loan Agreement) is September 13, 2023. The parties and their addresses are:

LENDER:
FIRST SOUTHERN BANK
1075 Highway 98
Columbia, MS 39429
Telephone: (601) 736-6378

BORROWER:
LOOKS GREAT SERVICES OF MS, INC.
a Mississippi Corporation
1501 Hwy 13 North
Columbia, MS 39429

1. DEFINITIONS. As used in this Loan Agreement, the terms have the following meanings:

A. Pronouns. The pronouns "I," "me," and "my" refer to each Borrower signing this Loan Agreement and each other person or legal entity (including guarantors, endorsers, and sureties) who agrees to pay this Loan Agreement. "You" and "Your" refer to the Lender, any participants or syndicators, successors and assigns, or any person or company that acquires an interest in the Loan.

B. Loan Agreement. Loan Agreement refers to this combined Note and Security Agreement, and any extensions, renewals, modifications and substitutions of this Loan Agreement.

C. Loan. Loan refers to this transaction generally, including obligations and duties arising from the terms of all documents prepared or submitted for this transaction such as applications, security agreements, disclosures or notes, and this Loan Agreement.

D. Loan Documents. Loan Documents refer to all the documents executed as a part of or in connection with the Loan.

E. Property. Property is any property, real, personal or intangible, that secures my performance of the obligations of this Loan.

F. Percent. Rates and rate change limitations are expressed as annualized percentages.

G. Dollar Amounts. All dollar amounts will be payable in lawful money of the United States of America.

2. PROMISE TO PAY. For value received, I promise to pay you or your order, at your address, or at such other location as you may designate, amounts advanced from time to time under the terms of this Loan Agreement up to the maximum outstanding principal balance of **$2,000,000.00 (Principal)**, plus interest from the date of disbursement, on the unpaid outstanding Principal balance until this Loan Agreement is paid in full and you have no further obligations to make advances to me under the Loan.

I may borrow up to the Principal amount more than one time.

3. ADVANCES. Advances under this Loan Agreement are made according to the following terms and conditions.

A. Requests for Advances. My requests are a warranty that I am in compliance with all the Loan Documents. When required by you for a particular method of advance, my requests for an advance must specify the requested amount and the date and be accompanied with any agreements, documents, and instruments that you require for the Loan. Any payment by you of any check, share draft or other charge may, at your option, constitute an advance on the Loan to me. All advances will be made in United States dollars. I will indemnify you and hold you harmless for your reliance on any request for advances that you reasonably believe to be genuine. To the extent permitted by law, I will indemnify you and hold you harmless when the person making any request represents that I authorized this person to request an advance even when this person is unauthorized or this person's signature is not genuine.

I or anyone I authorize to act on my behalf may request advances by the following methods.

(1) I make a request in person.

(2) I make a request by phone.

(3) Funds will be available up to $1,000,000 without pledging contracts. Remaining $1,000,000 available at 60% of contract assignments.

B. Advance Limitations. In addition to any other Loan conditions, requests for, and access to, advances are subject to the following limitations.

(1) Discretionary Advances. You will make all Loan advances at your sole discretion.

(2) Advance Amount. Subject to the terms and conditions contained in this Loan Agreement, advances will be made in exactly the amount I request.

(3) Cut-Off Time. Requests for an advance received before 12:00:00 AM will be made on any day that you are open for business, on the day for which the advance is requested.

(4) Disbursement of Advances. On my fulfillment of this Loan Agreement's terms and conditions, you will disburse the advance in any manner as you and I agree.

Wolters Kluwer Financial Services ©1996, 2023 Bankers Systems™

(5) Credit Limit. I understand that you will not ordinarily grant a request for an advance that would cause the unpaid principal of my Loan to be greater than the Principal limit. You may, at your option, grant such a request without obligating yourselves to do so in the future. I will pay any overadvances in addition to my regularly scheduled payments. I will repay any overadvance by repaying you in full within days after the overadvance occurs.

(6) Records. Your records will be conclusive evidence as to the amount of advances, the Loan's unpaid principal balances and the accrued interest.

C. Additional Conditions. Remaining balance of $1,000,000 to be advanced per Board Approval at 60% of contract assignments

4. INTEREST. Interest will accrue on the unpaid Principal balance of this Loan Agreement at the rate of **8.000 percent (Interest Rate).**

A. Post-Maturity Interest. After maturity or acceleration, interest will accrue on the unpaid Principal balance of this Loan Agreement at the Interest Rate in effect from time to time, until paid in full.

B. Maximum Interest Amount. Any amount assessed or collected as interest under the terms of this Loan Agreement will be limited to the maximum lawful amount of interest allowed by applicable law. Amounts collected in excess of the maximum lawful amount will be applied first to the unpaid Principal balance. Any remainder will be refunded to me.

C. Accrual. Interest accrues using an Actual/360 days counting method.

5. ADDITIONAL CHARGES. As additional consideration, I agree to pay, or have paid, the fees and charges listed on the APPENDIX: FEES AND CHARGES, which is attached to and made part of this Loan Agreement.

6. REMEDIAL CHARGES. In addition to interest or other finance charges, I agree that I will pay these additional fees based on my method and pattern of payment. Additional remedial charges may be described elsewhere in this Loan Agreement.

A. Late Charge. If a payment is more than **15** days late, I will be charged **4.000** percent of the Amount of Payment or **$5.00**, whichever is greater. However, this charge will not be greater than **$50.00**. I will pay this late charge promptly but only once for each late payment.

7. PAYMENT. I agree to pay this Loan Agreement on demand, but if no demand is made, I agree to pay all accrued interest on the balance outstanding from time to time in regular payments beginning March 13, 2024, then on the same day in each 6th month thereafter. A final payment of the entire unpaid outstanding balance of Principal and interest will be due September 13, 2025.

Payments will be rounded to the nearest $.01. With the final payment I also agree to pay any additional fees or charges owing and the amount of any advances you have made to others on my behalf. Payments scheduled to be paid on the 29th, 30th or 31st day of a month that contains no such day will, instead, be made on the last day of such month.

Interest payments will be applied first to any charges I owe other than late charges, then to accrued, but unpaid interest, then to late charges. Principal payments will be applied first to the outstanding Principal balance, then to any late charges. If you and I agree to a different application of payments, we will describe our agreement on this Loan Agreement. The actual amount of my final payment will depend on my payment record.

8. PREPAYMENT. I may prepay this Loan under the following terms and conditions. The loan may be prepaid in full or in part at any time. Any partial prepayment will not excuse any later scheduled payments until I pay in full.

9. LOAN PURPOSE. The purpose of this Loan is to re-issue a business line of credit for expenses/investments.

10. ADDITIONAL TERMS. Assignment of Contracts to be described with a Loan Modification Agreement once received from the customer. (60% advance on contract assignment)

11. SECURITY. The Loan is secured by Property described in the SECURITY AGREEMENT section, and by separate security instruments prepared together with this Loan Agreement as follows:

Copy

Document Name	Parties to Document	Date of Security Document
Assignment Of Life Insurance Policy - 22910860	Kristian T Agoglia	9/13/2023

12. GUARANTY. A Guaranty, dated September 13, 2023, from Kristian T Agoglia (Guarantor) to you, guaranties the payment and performance of my debts as described in the Guaranty.

A Guaranty, dated September 13, 2023, from Yolanda Agoglia (Guarantor) to you, guaranties the payment and performance of my debts as described in the Guaranty.

13. SECURITY AGREEMENT.

A. Secured Debts. This Security Agreement will secure the following debts (Secured Debts), together with all extensions, renewals, refinancings, modifications and replacements of these debts:

(1) Sums Advanced under the terms of this Loan Agreement. All sums advanced and expenses incurred by you under the terms of this Loan Agreement.

B. Limitations on Cross-collateralization. The Line of Credit is not secured by a previously executed security instrument if a non-possessory, non-purchase money security interest is created in "household goods" in connection with a "consumer loan," as those terms are defined by federal law governing unfair and deceptive credit practices. The Line of Credit is not secured by a previously executed security instrument if you fail to fulfill any necessary requirements or fail to conform to any limitations of the Real Estate Settlement Procedures Act, (Regulation X), that are required for loans secured by the Property or if, as a result, the other debt would become subject to Section 670 of the John Warner National Defense Authorization Act for Fiscal Year 2007.

The Line of Credit is not secured by a previously executed security instrument if you fail to fulfill any necessary requirements or fail to conform to any limitations of the Truth in Lending Act, (Regulation Z), that are required for loans secured by the Property.

C. Security Interest. To secure the payment and performance of the Secured Debts, I grant you a security interest in all of the Property described in this Security Agreement that I own or have sufficient rights in which to transfer an interest, now or in the future, wherever the Property is or will be located, and all proceeds and products from the Property (including, but not limited to, all parts, accessories, repairs, replacements, improvements, and accessions to the Property). Property is all the collateral given as security for the Secured Debts and described in this Security Agreement, and includes all obligations that support the payment or performance of the Property. "Proceeds" includes cash proceeds, non-cash proceeds and anything acquired upon the sale, lease, license, exchange, or other disposition of the Property; any rights and claims arising from the Property; and any collections and distributions on account of the Property.

This Security Agreement remains in effect until terminated in writing, even if the Secured Debts are paid and you are no longer obligated to advance funds to me under any loan or credit agreement.

D. Property Description. The Property subject to this Security Agreement is described as follows:

(1) Specific Property. Assignment of Contracts to be described with a Loan Modification Agreement once received from the customer. Also current UCC filed #20203225651A

E. Duties Toward Property.

(1) Protection of Secured Party's Interest. I will defend the Property against any other claim. I agree to do whatever you require to protect your security interest and to keep your claim in the Property ahead of the claims of other creditors. I will not do anything to harm your position.

I will keep books, records and accounts about the Property and my business in general. I will let you examine these and make copies at any reasonable time. I will prepare any report or accounting you request which deals with the Property.

(2) Use, Location, and Protection of the Property. I will keep the Property in my possession and in good repair. I will use it only for commercial purposes. I will not change this specified use without your prior written consent. You have the right of reasonable access to inspect the Property and I will immediately inform you of any loss or damage to the Property. I will not cause or permit waste to the Property.

I will keep the Property at my address listed in the DATE AND PARTIES section unless we agree I may keep it at another location. If the Property is to be used in other states, I will give you a list of those states. The location of the Property is given to aid in the identification of the Property. It does not in any way limit the scope of the security interest granted to you. I will notify you in writing and obtain your prior written consent to any change in location of any of the Property. I will not use the Property in violation of any law. I will notify you in writing prior to any change in my address, name or, if an organization, any change in my identity or structure.

Until the Secured Debts are fully paid and this Security Agreement is terminated, I will not grant a security interest in any of the Property without your prior written consent. I will pay all taxes and assessments levied or assessed against me or the Property and provide timely proof of payment of these taxes and assessments upon request.

(3) Selling, Leasing or Encumbering the Property. I will not sell, offer to sell, lease, or otherwise transfer or encumber the Property without your prior written permission. Any disposition of the Property contrary to this Security Agreement will violate your rights. Your permission to sell the Property may be reasonably withheld without regard to the creditworthiness of any buyer or transferee. I will not permit the Property to be the subject of any court order affecting my rights to the Property in any action by anyone other than you. If the Property includes chattel paper or instruments, either as original collateral or as proceeds of the Property, I will note your security interest on the face of the chattel paper or instruments.

F. Authority To Perform. I authorize you to do anything you deem reasonably necessary to protect the Property, and perfect and continue your security interest in the Property. If I fail to perform any of my duties under this Loan Agreement or any other security interest, you are authorized, without notice to me, to perform the duties or cause them to be performed.

These authorizations include, but are not limited to, permission to:

(1) pay and discharge taxes, liens, security interests or other encumbrances at any time levied or placed on the Property.

(2) pay any rents or other charges under any lease affecting the Property.

(3) order and pay for the repair, maintenance and preservation of the Property.

(4) file any financing statements on my behalf and pay for filing and recording fees pertaining to the Property.

(5) place a note on any chattel paper indicating your interest in the Property.

(6) take any action you feel necessary to realize on the Property, including performing any part of a contract or endorsing it in my name.

(7) handle any suits or other proceedings involving the Property in my name.

(8) prepare, file, and sign my name to any necessary reports or accountings.

(9) make an entry on my books and records showing the existence of this Agreement.

If you perform for me, you will use reasonable care. If you exercise the care and follow the procedures that you generally apply to the collection of obligations owed to you, you will be deemed to be using reasonable care. Reasonable care will not include: any steps necessary to preserve rights against prior parties; the duty to send notices, perform services or take any other action in connection with the management of the Property; or the duty to protect, preserve or maintain any security interest given to others by me or other parties. Your authorization to perform for me will not create an obligation to perform and your failure to perform will not preclude you from exercising any other rights under the law or this Loan Agreement. All cash and non-cash proceeds of the Property may be applied by you only upon your actual receipt of cash proceeds against such of the Secured Debts, matured or unmatured, as you determine in your sole discretion.

If you come into actual or constructive possession of the Property, you will preserve and protect the Property. For purposes of this paragraph, you will be in actual possession of the Property only when you have physical, immediate and exclusive control over the Property and you have affirmatively accepted that control. You will be in constructive possession of the Property only when you have both the power and the intent to exercise control over the Property.

G. Name and Location. My name indicated in the DATE AND PARTIES section is my exact legal name. I will provide verification of registration and location upon your request. I will provide you with at least 30 days notice prior to any change in my name, address, or state of organization or registration.

H. Perfection of Security Interest. I authorize you to file a financing statement and/or security agreement, as appropriate, covering the Property. I will comply with, facilitate, and otherwise assist you in connection with obtaining perfection or control over the Property for purposes of perfecting your security interest under the Uniform Commercial Code. I agree to pay all actual costs of terminating your security interest.

14. DEFAULT. I understand that you may demand payment anytime at your discretion. For example, you may demand payment in full if any of the following events (known separately and collectively as an Event of Default) occur:

A. Payments. I fail to make a payment in full when due.

B. Insolvency or Bankruptcy. The death, dissolution or insolvency of, appointment of a receiver by or on behalf of, application of any debtor relief law, the assignment for the benefit of creditors by or on behalf of, the voluntary or involuntary termination of existence by, or the commencement of any proceeding under any present or future federal or state insolvency, bankruptcy, reorganization, composition or debtor relief law by or against me or any co-signer, endorser, surety or guarantor of this Loan Agreement or any other obligations I have with you.

C. Business Termination. I merge, dissolve, reorganize, end my business or existence, or a partner or majority owner dies or is declared legally incompetent.

D. New Organizations. Without your written consent, I organize, merge into, or consolidate with an entity; acquire all or substantially all of the assets of another; materially change the legal structure, management, ownership or financial condition; or effect or enter into a domestication, conversion or interest exchange.

E. Failure to Perform. I fail to perform any condition or to keep any promise or covenant of this Loan Agreement.

F. Other Documents. A default occurs under the terms of any other Loan Document.

G. Other Agreements. I am in default on any other debt or agreement I have with you.

H. Misrepresentation. I make any verbal or written statement or provide any financial information that is untrue, inaccurate, or conceals a material fact at the time it is made or provided.

I. Judgment. I fail to satisfy or appeal any judgment against me.

J. Forfeiture. The Property is used in a manner or for a purpose that threatens confiscation by a legal authority.

K. Name Change. I change my name or assume an additional name without notifying you before making such a change.

L. Property Transfer. I transfer all or a substantial part of my money or property.

M. Property Value. You determine in good faith that the value of the Property has declined or is impaired.

N. Material Change. Without first notifying you, there is a material change in my business, including ownership, management, and financial conditions.

O. Insecurity. You determine in good faith that a material adverse change has occurred in my financial condition from the conditions set forth in my most recent financial statement before the date of this Loan Agreement or that the prospect for payment or performance of the Loan is impaired for any reason.

15. DUE ON SALE OR ENCUMBRANCE. You may, at your option, declare the entire balance of this Loan Agreement to be immediately due and payable upon the creation of, or contract for the creation of, any lien, encumbrance, transfer or sale of all or any part of the Property. This right is subject to the restrictions imposed by federal law, as applicable.

16. WAIVERS AND CONSENT. To the extent not prohibited by law, I waive protest, presentment for payment, demand, notice of acceleration, notice of intent to accelerate and notice of dishonor.

A. Additional Waivers By Borrower. In addition, I, and any party to this Loan Agreement, to the extent permitted by law, consent to certain actions you may take, and generally waive defenses that may be available based on these actions or based on the status of a party to this Loan Agreement.

(1) You may renew or extend payments on this Loan Agreement, regardless of the number of such renewals or extensions.

(2) You may release any Borrower, endorser, guarantor, surety, accommodation maker or any other co-signer.

(3) You may release, substitute or impair any Property securing this Loan Agreement.

(4) You, or any institution participating in this Loan Agreement, may invoke your right of set-off.

(5) You may enter into any sales, repurchases or participations of this Loan Agreement to any person in any amounts and I waive notice of such sales, repurchases or participations.

(6) I agree that any of us signing this Loan Agreement as a Borrower is authorized to modify the terms of this Loan Agreement or any instrument securing, guarantying or relating to this Loan Agreement.

(7) I agree that you may inform any party who guarantees this Loan of any Loan accommodations, renewals, extensions, modifications, substitutions or future advances.

B. No Waiver By Lender. Your course of dealing, or your forbearance from, or delay in, the exercise of any of your rights, remedies, privileges or right to insist upon my strict performance of any provisions contained in this Loan Agreement, shall not be construed as a waiver by you, unless any such waiver is in writing and is signed by you.

C. Waiver of Claims. I waive all claims for loss or damage caused by your acts or omissions where you acted reasonably and in good faith.

17. REMEDIES. After I default, you may at your option do any one or more of the following.

A. Acceleration. You may make all or any part of the amount owing by the terms of this Loan Agreement immediately due.

B. Sources. You may use any and all remedies you have under state or federal law or in any Loan Document.

C. Insurance Benefits. You may make a claim for any and all insurance benefits or refunds that may be available on my default.

D. Payments Made On My Behalf. Amounts advanced on my behalf will be immediately due and may be added to the balance owing under the terms of this Loan Agreement, and accrue interest at the highest post-maturity interest rate.

E. Termination. You may terminate my rights to obtain advances or other extensions of credit by any of the methods provided in this Loan Agreement.

F. Set-Off. You may use the right of set-off. This means you may set-off any amount due and payable under the terms of this Loan Agreement against any right I have to receive money from you.

My right to receive money from you includes any deposit or share account balance I have with you; any money owed to me on an item presented to you or in your possession for collection or exchange; and any repurchase agreement or other non-deposit obligation. "Any amount due and payable under the terms of this Loan Agreement" means the total amount to which you are entitled to demand payment under the terms of this Loan Agreement at the time you set-off.

Subject to any other written contract, if my right to receive money from you is also owned by someone who has not agreed to pay this Loan Agreement, your right of set-off will apply to my interest in the obligation and to any other amounts I could withdraw on my sole request or endorsement.

Your right of set-off does not apply to an account or other obligation where my rights arise only in a representative capacity. It also does not apply to any Individual Retirement Account or other tax-deferred retirement account.

You will not be liable for the dishonor of any check when the dishonor occurs because you set-off against any of my accounts. I agree to hold you harmless from any such claims arising as a result of your exercise of your right of set-off.

G. Assembly of Property. You may require me to gather the Property and make it available to you in a reasonable fashion.

H. Repossession. You may repossess the Property so long as the repossession does not involve a breach of the peace. You may sell, lease or otherwise dispose of the Property as provided by law. You may apply what you receive from the disposition of the Property to your expenses, your attorneys' fees and legal expenses (where not prohibited by law), and any debt I owe you. If what you receive from the disposition of the Property does not satisfy the debt, I will be liable for the deficiency (where permitted by law). In some cases, you may keep the Property to satisfy the debt.

Where a notice is required, I agree that ten days prior written notice sent by first class mail to my address listed in this Loan Agreement will be reasonable notice to me under the Mississippi Uniform Commercial Code. If the Property is perishable or threatens to decline speedily in value, you may, without notice to me, dispose of any or all of the Property in a commercially reasonable manner at my expense following any commercially reasonable preparation or processing (where permitted by law).

If any items not otherwise subject to this Loan Agreement are contained in the Property when you take possession, you may hold these items for me at my risk and you will not be liable for taking possession of them (where permitted by law).

I. Use and Operation. You may enter upon my premises and take possession of all or any part of my property for the purpose of preserving the Property or its value, so long as you do not breach the peace. You may use and operate my property for the length of time you feel is necessary to protect your interest, all without payment or compensation to me.

J. Waiver. Except as otherwise required by law, by choosing any one or more of these remedies you do not give up your right to use any other remedy. You do not waive a default if you choose not to use a remedy. By electing not to use any remedy, you do not waive your right to later consider the event a default and to use any remedies if the default continues or occurs again.

18. COLLECTION EXPENSES AND ATTORNEYS' FEES. On or after the occurrence of an Event of Default, to the extent permitted by law, I agree to pay all expenses of collection, enforcement or protection of your rights and remedies under this Loan Agreement or any other Loan Document. Expenses include, but are not limited to, attorneys' fees, court costs and other legal expenses. These expenses are due and payable immediately. If not paid immediately, these expenses will bear interest from the date of payment until paid in full at the highest interest rate in effect as provided for in the terms of this Loan Agreement. All fees and expenses will be secured by the Property I have granted to you, if any. In addition, to the extent permitted by the United States Bankruptcy Code, I agree to pay the reasonable attorneys' fees incurred by you to protect your rights and interests in connection with any bankruptcy proceedings initiated by or against me.

19. COMMISSIONS. I understand and agree that you (or your affiliate) will earn commissions or fees on any insurance products, and may earn such fees on other services that I buy through you or your affiliate.

20. WARRANTIES AND REPRESENTATIONS. I make to you the following warranties and representations which will continue as long as this Loan Agreement is in effect:

A. Power. I am duly organized, and validly existing and in good standing in all jurisdictions in which I operate. I have the power and authority to enter into this transaction and to carry on my business or activity as it is now being conducted and, as applicable, am qualified to do so in each jurisdiction in which I operate.

B. Authority. The execution, delivery and performance of this Loan Agreement and the obligation evidenced by this Loan Agreement are within my powers, have been duly authorized, have received all necessary governmental approval, will not violate any provision of law, or order of court or governmental agency, and will not violate any agreement to which I am a party or to which I am or any of my Property is subject.

C. Business Name. Other than previously disclosed in writing to you I have not changed my name or principal place of business within the last 10 years and have not used any other trade or fictitious name. Without your prior written consent, I do not and will not use any other name and will preserve my existing name, trade names and franchises.

D. Ownership of Property. I represent that I own all of the Property. Your claim to the Property is ahead of the claims of any other creditor, except as disclosed in writing to you prior to any advance on the Secured Debts. I represent that I am the original owner of the Property and, if I am not, that I have provided you with a list of prior owners of the Property.

21. APPLICABLE LAW. This Loan Agreement is governed by the laws of Mississippi, the United States of America, and to the extent required, by the laws of the jurisdiction where the Property is located, except to the extent such state laws are preempted by federal law. In the event of a dispute, the exclusive forum, venue and place of jurisdiction will be in Mississippi, unless otherwise required by law.

22. JOINT AND SEVERAL LIABILITY AND SUCCESSORS. My obligation to pay the Loan is independent of the obligation of any other person who has also agreed to pay it. You may sue me alone, or anyone else who is obligated on the Loan, or any number of us together, to collect the Loan. Extending the Loan or new obligations under the Loan, will not affect my duty under the Loan and I will still be obligated to pay the Loan. This Loan Agreement shall inure to the benefit of and be enforceable by you and your successors and assigns and shall be binding upon and enforceable against me and my successors and assigns.

23. AMENDMENT, INTEGRATION AND SEVERABILITY. This Loan Agreement may not be amended or modified by oral agreement. No amendment or modification of this Loan Agreement is effective unless made in writing. This Loan Agreement and the other Loan Documents are the complete and final expression of the agreement. If any provision of this Loan Agreement is unenforceable, then the unenforceable provision will be severed and the remaining provisions will still be enforceable. No present or future agreement securing any other debt I owe you will secure the payment of this Loan if, with respect to this loan, you fail to fulfill any necessary requirements or fail to conform to any limitations of the Truth in Lending Act (Regulation Z) or the Real Estate Settlement Procedures Act (Regulation X) that are required for loans secured by the Property or if, as a result, this Loan would become subject to Section 670 of the John Warner National Defense Authorization Act for Fiscal Year 2007.

24. INTERPRETATION. Whenever used, the singular includes the plural and the plural includes the singular. The section headings are for convenience only and are not to be used to interpret or define the terms of this Loan Agreement.

25. NOTICE, FINANCIAL REPORTS AND ADDITIONAL DOCUMENTS. Unless otherwise required by law, any notice will be given by delivering it or mailing it by first class mail to the appropriate party's address listed in the DATE AND PARTIES section, or to any other address designated in writing. Notice to one Borrower will be deemed to be notice to all Borrowers. I will inform you in writing of any change in my name, address or other application information. I will provide you any correct and complete financial statements or other information you request. I agree to sign, deliver, and file any additional documents or certifications that you may consider necessary to perfect, continue, and preserve my obligations under this Loan and to confirm your lien status on any Property. Time is of the essence.

26. CREDIT INFORMATION. I agree to supply you with whatever information you reasonably feel you need to decide whether to continue this Loan. You will make requests for this information without undue frequency, and will give me reasonable time in which to supply the information.

27. ERRORS AND OMISSIONS. I agree, if requested by you, to fully cooperate in the correction, if necessary, in the reasonable discretion of you of any and all loan closing documents so that all documents accurately describe the loan between you and me. I agree to assume all costs including by way of illustration and not limitation, actual expenses, legal fees and marketing losses for failing to reasonably comply with your requests within thirty (30) days.

28. AGREEMENT TO ARBITRATE. You or I may submit to binding arbitration any dispute, claim or other matter in question between or among you and me that arises out of or relates to this Transaction (Dispute), except as otherwise indicated in this section or as you and I agree to in writing. For purposes of this section, this Transaction includes this Loan Agreement and the other Loan Documents, and proposed loans or extensions of credit that relate to this Loan Agreement. You or I will not arbitrate any Dispute within any "core proceedings" under the United States bankruptcy laws.

You and I must consent to arbitrate any Dispute concerning a debt secured by real estate at the time of the proposed arbitration. You may foreclose or exercise any powers of sale against real property securing a debt underlying any Dispute before, during or after any arbitration. You may also enforce a debt secured by this real property and underlying the Dispute before, during or after any arbitration.

You or I may, whether or not any arbitration has begun, pursue any self-help or similar remedies, including taking property or exercising other rights under the law; seek attachment, garnishment, receivership or other provisional remedies from a court having jurisdiction to preserve the rights of or to prevent irreparable injury to you or me; or foreclose against any property by any method or take legal action to recover any property. Foreclosing or exercising a power of sale, beginning and continuing a judicial action or pursuing self-help remedies will not constitute a waiver of the right to compel arbitration.

The arbitrator will determine whether a Dispute is arbitrable. A single arbitrator will resolve any Dispute, whether individual or joint in nature, or whether based on contract, tort, or any other matter at law or in equity. The arbitrator may consolidate any Dispute with any related disputes, claims or other matters in question not arising out of this Transaction. Any court having jurisdiction may enter a judgment or decree on the arbitrator's award. The judgment or decree will be enforced as any other judgment or decree.

You and I acknowledge that the agreements, transactions or the relationships which result from the agreements or transactions between and among you and me involve interstate commerce. The United States Arbitration Act will govern the interpretation and enforcement of this section.

The American Arbitration Association's Commercial Arbitration Rules, in effect on the date of this Loan Agreement, will govern the selection of the arbitrator and the arbitration process, unless otherwise agreed to in this Loan Agreement or another writing.

29. WAIVER OF TRIAL FOR ARBITRATION. You and I understand that the parties have the right or opportunity to litigate any Dispute through a trial by judge or jury, but that the parties prefer to resolve Disputes through arbitration instead of litigation. If any Dispute is arbitrated, you and I voluntarily and knowingly waive the right to have a trial by jury or judge during the arbitration.

30. SIGNATURES. By signing, I agree to the terms contained in this Loan Agreement. I also acknowledge receipt of a copy of this Loan Agreement.

Equipment List

With a fleet of hundreds of trucks and equipment, a staff of over 200 professionals, and four locations in New York, North Carolina, Mississippi, and Texas our vegetation management teams can activate at a moment's notice. Mobile mechanics, housing units, and fueling equipment expedite the process and keep our team operational around-the-clock until the job is complete.

RFP# 25-05-PW PROPOSAL

THREE-YEAR PRE-POSITIONED CONTRACT FOR DISASTER DEBRIS MANAGEMENT SERVICES

Signature Sheet

The undersigned, as Proposer, does declare that no other persons other than the proposer herein named has any interest in this proposal or in the contract to be taken, and that it is made without any connection with any other person or persons making a proposal for the same articles, and it is in all respects fair and without collusion or fraud. The undersigned further declares that he has carefully examined the specifications and is thoroughly familiar with their provisions and penalties. **The proposer proposes and agrees if this proposal is accepted, to contract with the City of Destin, Florida, in the form of contract specified, to furnish all the material, equipment, machinery, tools, apparatus, labor, and means of transportation necessary to provide the services as required in the specifications.**

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, Looks Great Services, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. 25-05-PW

   for City of Destin, Florida.

2. This sworn statement is submitted by Looks Great Services of MS, Inc.
   [name of entity submitting sworn statement]

   whose business address is 1501 Hwy 13 North, Columbia, MS 39429
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 27-4125328

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is Kristian Agoglia and my relationship to
   [please print name of individual signing]

   the entity named above is Vice President.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

☑ Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

____ There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

__The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

CITY OF DESTIN
ANTI-HUMAN TRAFFICKING AFFIDAVIT

DIRECTIONS: *All nongovernmental entities that are or potentially will be contracting, renewing or extending contracts with the City of Destin must have an officer or representative fully execute this affidavit. Note, this is a mandatory requirement of s 787.06(13), Florida Statutes effective July 1, 2024.*

I Kristian Agoglia (insert name) as Vice President (insert title) on behalf of Looks Great Services of MS, Inc. (insert entity name) under penalty of perjury hereby attest as follows:

1. I am over 21 years of age and have personal knowledge of the matters set forth in this affidavit.
2. Looks Great Services of MS, Inc. (insert entity name) does not use coercion for labor or services as defined in s. 787.06(2)(a), Florida Statutes.
3. More particularly, Looks Great Services of MS, Inc. (insert entity name) does not participate in any of the following actions:
    a. Using or threatening to use physical force against any person;
    b. Restraining, isolating or confining or threatening to restrain, isolate or confine any person without lawful authority and against her or his will;
    c. Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt or the length and nature of the labor or services are not respectively limited and defined;
    d. Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;
    e. Causing or threatening to cause financial harm to any person;
    f. Enticing or luring any person by fraud or deceit; or
    g. Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03, Florida Statutes to any person for the purpose of exploitation of that person.

2 LETTER OF INTEREST

Phillips & Jordan Environmental Services, LLC (PJE) values the opportunity to present our Disaster Debris Management Services Proposal in response to RFP# 25-05-PW. PJE is a scaled special-purpose disaster services entity focused on preparedness, response, and recovery efforts. Continuing to build on Phillips & Jordan's (P&J) legacy and through our enterprise capabilities, we bring over four decades of experience in debris removal and disaster response.

Our enterprise capabilities in disaster response have grown since the 1989 Hurricane Hugo clean-up. As a result, our teams have assisted federal, state, local governments, and private sector clients throughout the US, making us a recognized market leader. PJE is built on this legacy, enabling us to provide the necessary management team, equipment, personnel, and resources to respond to future disasters rapidly and efficiently. We have reviewed, interpreted, and understand the RFP's scope of work and will adhere to applicable OSHA, EPA, and DEP requirements to ensure a safe work environment.

As requested in the City's RFP, please find a summary of information regarding PJE's key capabilities and qualifications below:

Firm Size: PJE currently has 4 full-time employees. Through the Phillips Family of Companies, PJE effectively leverages a robust staffing bench of over 1,000 dedicated, full-time employees, many with proven experience in disaster response. Detailed information regarding personnel abilities and experience is provided in **Tab 3 – Experience and Ability.**

Range of Services: Phillips & Jordan Environmental Services, LLC (PJE) is a disaster response specialist built on decades of experience. The Phillips family of companies also includes heavy civil and power infrastructure contractors that have the personnel, equipment, and experience to work across four (4) additional key markets: Heavy Civil Construction (Industrial & Commercial, Water Resources, Mining), Power (Transmission & Distribution, Renewables, Generation), and Disaster Response.

Years of Experience Providing Similar Services: Through our legacy company, PJE offers more than 40+ years of experience as a disaster debris management contractor.

Summary of Abilities and Experience of Professional Personnel: PJE's capacity and capability to perform disaster debris management services include a disaster core response group offering more than 90 years of combined debris removal experience, extensive disaster debris management experience, and FEMA Public Assistance Grant Program administration. ***More detail is provided in Tab 3 – Experience and Ability.***

Summary of Past Performance on Similar Projects: Through our legacy company, we have managed over 250 debris management missions for over 200 individual local, state, regional, and federal governments and agencies in 22 states nationwide. ***More detail is provided in Tab 5 – Previous Experience.***

Recent, Current, and Projected Workload of the Firm and Availability and Access to the Firm's Top-Level Management Personnel: Most recently, PJE partnered with our legacy company, P&J, to successfully complete debris removal operations in Florida, Georgia, South Carolina and Tennessee in response to the devastation of Hurricanes Helene and Milton and is currently performing Waterway Debris Removal in multiple counties in Tennessee for TEMA (Tennessee Emergency Management Agency). As the nature of disaster work is unpredictable, PJE can not confidently provide a projected workload for the 2025 storm season. PJE is managed by Brian Smallwood and Sydney Kendrick. Upon award of contract with the City, Mr. Smallwood and Ms. Kendrick will serve as the main points of contact throughout the disaster lifecycle.

Why Phillips & Jordan Environmental? As noted above, our disaster management includes a response group with over 90 years of combined debris removal experience. PJE's operations team prioritizes clients' needs throughout all disaster phases, with essential resources and systems to execute the RFP's scope, including safety management, accounting, resource deployment, and access to owned equipment, with demonstrable experience supporting our interest in this opportunity. We provide rapid mobilization and scalable resources rooted in our core values of integrity, safety, quality, and production, as validated through our successful past performance record. Our commitment through execution is to immediately deploy and mobilize a management team and equipment, coordinate with the owner's response team, and begin integrating with the overall recovery efforts PJE has the balance sheet, financial partners, and proven systems and processes to support the necessary project operations expected of the disaster debris management contractor selected by the City.

To ensure compliance with 2CFR 200, we provide the required bid, payment, performance bonds, and rates that can support FEMA's reasonable cost criteria. As a project's scope and cost expand, we provide the increased bonding capacity necessary to reduce the financial risk to the City. Our aggregate bonding capacity of $1.75B represents our enterprise experience and capabilities of legacy ongoing and future projects.

The authorized representatives for PJE regarding communications related to this proposal are as follows:

Primary	Alternate
Brian Smallwood	Sydney Kendrick
Disaster Services Program Manager	Disaster Services Business Manager
Phone (251) 525-0011	Phone (325) 998-1023
bsmallwood@pandjenv.com	skendrick@pandjenv.com

We are committed to providing Disaster Debris Management Services to the City of Destin professionally, promptly, and within contract specifications. We look forward to joining your disaster response and recovery team.

Sincerely,

Bryan McIsaac
Chief Financial Officer
Phillips & Jordan Environmental Services, LLC.

3 EXPERIENCE AND ABILITY

Phillips & Jordan Environmental Services, LLC (PJE) is a disaster response specialist built on decades of experience. The Phillips & Jordan (P&J) legacy brand has been responding to major disaster events, since the late 1980s, including Hurricane Katrina, the 2011 Super Tornado Outbreak, and the 9/11 attack on the World Trade Center.

In 2024, PJE was formed to bring a laser focus to our disaster recovery efforts for our clients. Our highly experienced team is bringing P&J's heavy civil construction knowledge, resources, and experience into a holistic approach to emergency management, from Preparedness to Response, Recovery, and Mitigation. By looking at the entire picture, the PJE team is committed to helping communities move forward more resiliently by helping them prepare and recover from emergencies.

PHILLIPS & JORDAN — A Proven Solution

40 YEARS

More than four decades of experience in disaster debris management—We're built on P&J's legacy of disaster response, dating back to the Toe River Flood in 1977.

QUICK AND COMPETITIVE SUBCONTRACTOR PAYMENT

We value our subcontractor relationships and have established loyal key partners.

DEMONSTRATED ACHIEVEMENT OF LOCAL AND SMALL / DISADVANTAGED BUSINESS PARTICIPATION

We're a certified woman-owned business, and we have a wide network of subcontractors.

QUALIFIED, FULL-TIME KEY PERSONNEL

We work 52 weeks/year to track storm events, manage resources, and maintain readiness.

INNOVATIVE PROJECT CONTROLS

We are a market maker in technology (ADMS) and delivering project controls and reporting processes to the disaster recover industry.

VALUES-FORWARD APPROACH

Integrity is our first core value, and our management team operates with transparency and honesty.

ESTABLISHED

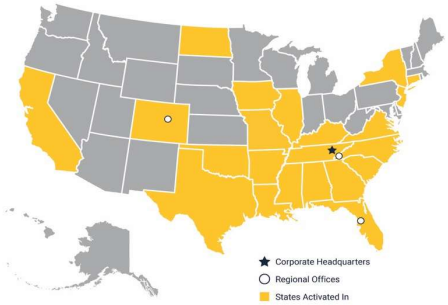
PJE is built on P&J's legacy. Our team has three decades of proven success in disaster debris management.

EXPERIENCED

Our team has completed debris management missions in response to hurricanes, ice storms, flooding, tornados, fires, man-made disasters, and more.

ENDURING

As a dedicated disaster services group, PJE is committed to pursuing innovative solutions in a dynamic market.



+300 PROJECTS | +200 CLIENTS | 22 STATES

SINCE 1977

3.1 Summary of Qualifications

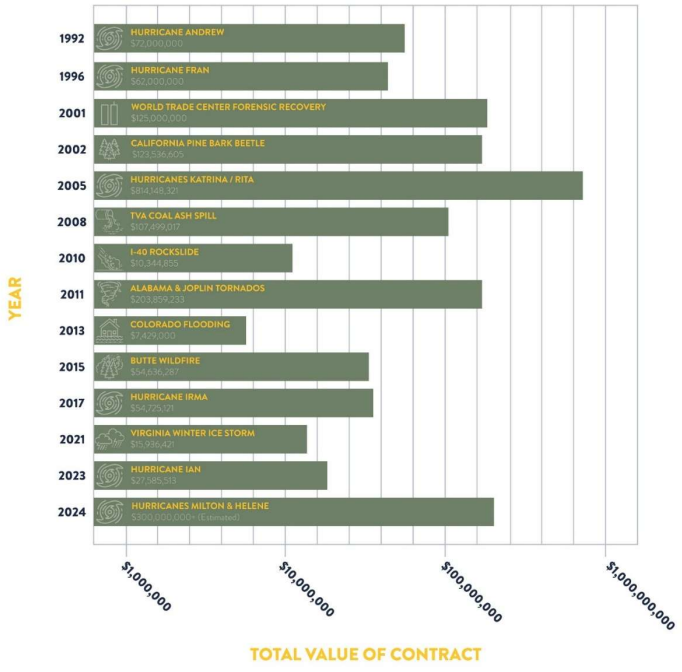
We are proud to leverage the extensive expertise and experience of our legacy partner, P&J. Our team possesses the capabilities to rapidly deploy the necessary management team, equipment, workforce, and resources to respond to any natural or man-made disaster effectively. Under P&J, over the past four decades, we have completed disaster debris management missions totaling more than $2.2 billion for over 200 individual jurisdictions across the US.

Our team is well-versed in all aspects of disaster debris management, including the following:

- The implementation of requirements outlined in FEMA's Public Assistance Program and Policy Guide (PAPPG), Version 5 (January 2025)
- FEMA Public Assistance Debris Management Guide
- FEMA Public Assistance Debris Monitoring Guide
- The U.S. Office of Management and Budget's Super Circular or the Code of Federal Regulations, Title 2, Chapter 200 (2CFR 200) "Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards" (previously under 44CFR)

3.2 Summary of Past Performance

With 300+ successful missions completed in 22 states, we respond to a wide range of disasters, including hurricanes, floods, wildfires, and more. The following graph is a representation of notable disaster missions completed by our legacy company.



In response to RFP requirements, detailed project information over the past ten (10) years is provided in Tab 5 – Previous Experience.

3.3 Additional Capabilities and Experience

The Phillips family of companies also includes heavy civil and power infrastructure contractors that have the personnel, equipment, and experience to work across four (4) additional key markets.

- **Water:** New construction, rehabilitation and restoration, alternative delivery models
- **Industrial & Commercial:** manufacturing, distribution, rail and port, landfills, commercial and residential sites
- **Mining:** site development, leach pads, contract mining, reclamation, tailings
- **Power**
    - **Transmission & Distribution:** ROW construction, foundation drilling, overhead and underground electrical, substations, storm recovery
    - **Renewables:** Civil works, balance of plant, substations, interconnect
    - **Generation:** Facility civil works, CCR management and excavation, landfill construction, management, and closure

3.4 Experience in Filing and Receiving Federal and State Reimbursements

Following project close-out, PJE will assist the City and their third-party monitoring firm with relevant reporting and communication to ensure timely and comprehensive FEMA reimbursement for work performed. Our legacy company has successfully managed over 50 FEMA-reimbursed disaster debris management mission contracts, resulting in payments exceeding $300,000,000. **No client has ever been denied reimbursement for work performed.**

99% of the FEMA and FHWA paperwork can be completed by the PJE management team with no help from the City. However, since the majority of the information required on the FEMA and FHWA paperwork requires data from the monitoring firm, the monitoring firm normally completes the forms. In most cases, the applicant hires a public assistance firm to handle the paperwork. As with monitoring cost, the public assistance cost is reimbursable. Most monitoring firms have the capability of doing both scopes of service.

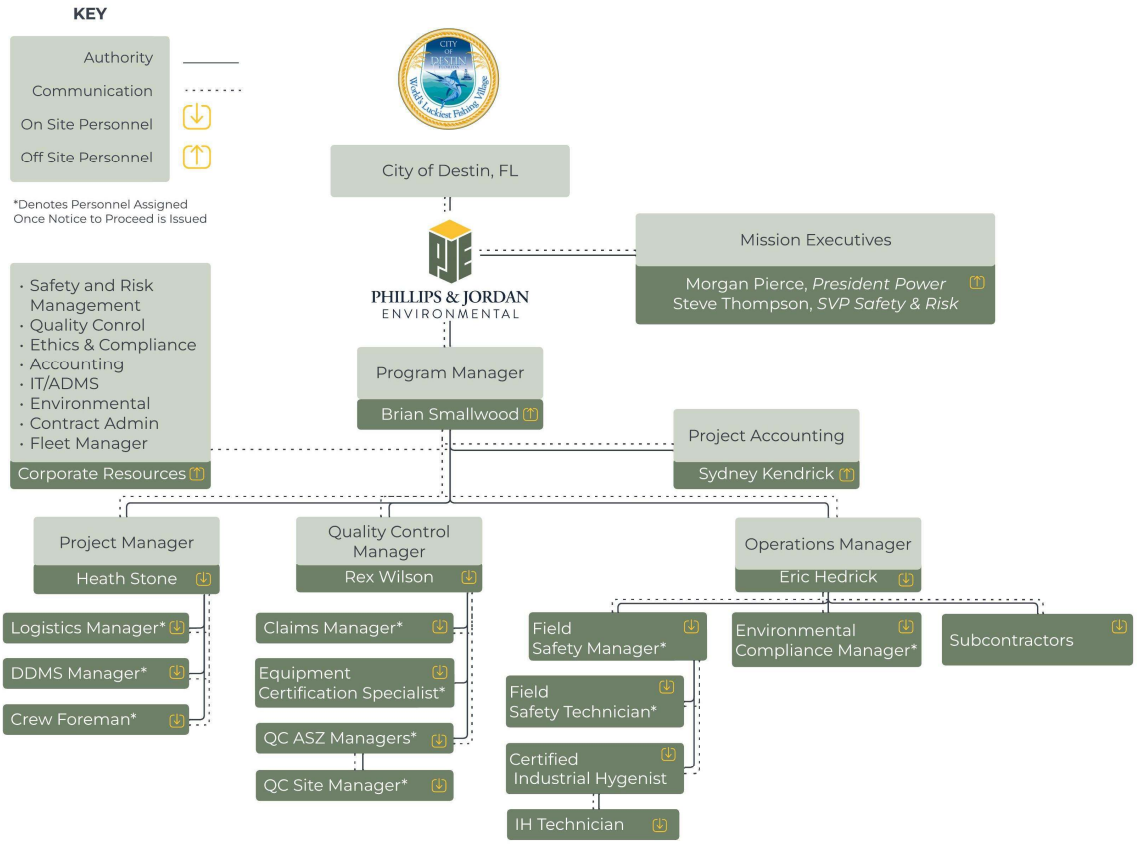
3.5 Staffing Plan & Management Structure

Our skilled team has successfully managed multiple disaster debris missions and can support the City during future disaster events. Our workforce includes a core response group with demonstrated disaster response experience with FEMA, USACE and local and state governments. **If awarded, work for this contract will operate out of our regional office in San Antonio, FL with support from our staff in Knoxville, TN.**

Our adaptable management structure is led by a program manager who coordinates resources and controls all activities, selecting qualified personnel for each mission. **We anticipate Brian Smallwood, PJE's Disaster Services Program Manager, will serve as the City's main contact. Sydney Kendrick will serve as a secondary contact and will be responsible for the administration of the project upon activation. Credentials for Smallwood and Kendrick are provided in Section 3.5.3.**

We have experience staffing project management teams for simultaneous activations and primarily use our core response group for typical response scenarios. PJE personnel's specific qualifications that make up our core response group are described below. Resumes are available in Section 3.5.3 of this proposal.

We recognize that any modifications to the listed personnel during an event must be promptly reported to and approved by the City of Destin. The City may also request additional personnel as needed.



3.5.1 Core Response Group

Brian Smallwood – Program Manager: Mr. Smallwood offers 14 years of disaster experience and has participated in the following disaster events: (2024) Hurricanes Helene and Milton – (2023) Hurricane Idalia – (2022) Hurricane Ian – (2021) Hurricane Ida – (2020-2021) Hurricane Laura – (2020) Tropical Storm Cristobol – (2018-2019) Hurricane Michael – (2018) Hurricane Irma – (2017) Hurricane Harvey – (2016-2017) Hurricane Matthew – (2016) Hurricane Hermine – (2011) Hurricane Irene – (2011) Joplin Tornado.

Certifications: Qualified Agent – Florida GC License, LEED AP, OSHA 40-Hour, HAZWOPER, OSHA 30-Hour Construction Safety, USACE- Construction Quality Mngt. American Society of Healthcare Eng. (ASHE), TWIC Card Holder, NPDES, CPR & Blood Pathogen Training

Sydney Kendrick – Business Manager: Mrs. Kendrick offers 5 years of disaster experience and has participated in the following types of Emergency Response Missions: Hurricane and Winter Storm Events. Specific activations include the following significant projects: (2024) Hurricanes Helene and Milton – (2023) Hurricane Idalia – (2022) Hurricane Ian and (2021) Virginia Winter Ice Storm.

Certifications: Federal Emergency Management Agency (FEMA) Emergency Management Institute (EMI): Basic Incident Command System for Initial Response; IS-230, Fundamentals of Emergency Management; IS-632-Introduction to Debris Operations, GovCon 101: The Federal Acquisition Regulation; Federal Acquisition Regulation (FAR) and Federal Government Purchasing – Course 3900, Standard First Aid and CPR Training

Eric Hedrick – Operations Manager: Mr. Hedrick offers 25 years of disaster experience and has participated in the following disaster events: (2023) Hurricane Idalia –(2024) Hurricanes Helene and Milton – (2022) Hurricane Ian – (2021) Virginia Winter Ice Storm - (2017) Hurricanes Irma and Harvey – (2016) Harris County Texas Flood, Multiple Louisiana Parish Flood – (2015) Calaveras County California Butte Wildfire, Multiple County South Carolina Flood – (2014) Williamsburg/Florence County South Carolina Ice Storm – (2013) Multiple County Colorado Flood – (2011) Alabama Spring Tornado Outbreak – (2005) Hurricanes Katrina, Rita, and Dennis – (2004) Hurricane Ivan – (2001) 9/11 World Trade Center Forensic Recovery Mission.

Certifications: Federal Emergency Management Agency (FEMA) Emergency Management Institute (EMI): FEMA 325: Public Assistance Debris Management Guide, Federal Emergency Response Official, issued by Homeland Security, U.S. Army Corps of Engineers (USACE) Construction Quality Management (CQM) Training, USACE Safety Training, Occupational Safety & Health Administration (OSHA) 30-Hour, State of Georgia National Pollutant Discharge Elimination System (NPDES) Qualified, Jacksonville, Florida Electric Authority 10-Hour Safety Certification, Safe Land Training, First Aid and CPR Training

Morgan Pierce – Mission Executive: Mr. Pierce offers 21 years of disaster experience and has participated in the following disaster events: (2024) Hurricanes Helene and Milton – (2023) Hurricane Idalia – (2022) Hurricane Ian – (2021) Virginia Winter Ice Storm – (2017) Hurricane Irma – (2015) Calaveras County California Butte Wildfire – (2011) Alabama Spring Tornado Outbreak – (2005) Hurricanes Katrina, Rita, and Wilma – (2004) Hurricanes Charley, Frances, and Jeanne.

Certifications: Certified Erosion Control Installer , CPR / First Aid, OSHA 10-Hour EHAT – Climbing & Chainsaw Training, Confined Space Entry Competent Person, USACE QA/QC Training

Heath Stone – Project Manager: Mr. Stone offers 5 years of disaster experience and has participated in the following types of Emergency Response Missions: Hurricanes, Flooding, Tornadoes, Wildfires, and Winter Storm Events. Specific activations include the following significant projects: (2024) Hurricanes Helene and Milton – (2023) Hurricane Idalia – (2021) Virginia Winter Ice Storm - (2017) Hurricane Irma Hillsborough County, Town of Belleair, Kenneth City, and Pinellas Park – (2014) Williamsburg/Florence County South Carolina Ice Storm.

Certifications: Federal Emergency Management Agency (FEMA) Emergency Management Institute (EMI): ICS-100, Introduction to ICS; ICS-200, ICS for Single Resources and Initial Action Incidents; ICS-700 National Incident Management System (NIMS), An Introduction, First Aid and CPR Training

Steve Thompson – Corporate Environmental, Safety & Health Manager: With 25 years of disaster experience, Mr. Thompson oversees our health and safety program, including policy development, accident investigation, and subcontractor program monitoring. He served as the primary safety manager for significant recovery missions, including the World Trade Center Staten Island Landfill (2001) and Hurricanes Katrina (2005), Gustav & Ike (2008), Irene (2011), and the Alabama and Joplin tornadoes (2011). Throughout the past couple of decades, he has supported all our disaster contract activations to varying extents.

Certifications: Certified Work Zone Traffic Control Supervisor, Excavation Competent Person Training - Trainer/Instructor, Permit Required Confined Space Training - Trainer/Instructor, Fall Protection Training - Trainer/Instructor, Line Clearance, Tree Trimming, Electrical Hazard Awareness Program Training - Trainer/Instructor, Hazard Communication "Right to Know" Instructor, Lockout/Tagout Training/Instructor, Occupational Safety and Health Administration (OSHA): 40-hour Hazardous Waste Operations and Emergency Response, and 1926 10-hour Construction Safety Training, Site Sense Behavioral Safety, Department of Energy Safety Health and Radiological Protection, First Aid/CPR/Blood Borne Pathogens

***Resumes available in Section 3.5.3**

3.5.2 Additional Support Staff

Brigham Waginger—Alternate Project Manager: Mr. Waginger offers 3 years of disaster and debris management experience. He has participated in the following disaster events: (2024) Hurricanes Helene & Milton—(2022) Hurricane Ian.

Bailey Byrum—Alternate Project Manager: Mr. Byrum offers 3 years of disaster management experience. He has served on the following disaster projects: (2024) Hurricanes Helene & Milton—(2022) Hurricane Ian.

Rex Wilson—Quality Control Manager: Mr. Wilson offers 19 years of disaster management experience. He has served on the following disaster projects: (2022) Hurricane Ian—(2017) Hurricane Harvey—(2016-2018) Southern California Bark Beetle Infestation—(2016) Harris County Flood—(2015-2016) Butte Wildfire Recovery Project—(2012) Hurricane Sandy—(2011) State of Alabama Tornado Super Outbreak—(2011) Joplin, Missouri Tornado—(2011) Hurricane Irene—(2013) Colorado Flood—(2010) Deepwater Horizon Oil Spill—(2009) Oklahoma Ice Storm—(2008) Hurricane Ike—(2008) Hurricane Gustav—(2006) City of Buffalo Ice Storm.

Henry Partin—Alternate Project Manager: Mr. Partin offers 13 years of disaster management experience. He has served on the following disaster projects: (2024) Hurricanes Helene & Milton—(2022) Hurricane Ian—(2021) Virginia Winter Storm Recovery—(2017) Hurricane Irma—(2013) Colorado Flood—(2011) State of Alabama Tornado Super Outbreak—(2005-2007) Hurricanes Katrina & Rita.

Jack Creasy—Alternate Project Manager: Mr. Creasy offers 3 years of disaster management experience. He has served on the following disaster projects: (2024) Hurricanes Helene & Milton—(2022-2023) Hurricane Ian—(2011) Joplin, Missouri Tornado Debris Management

Steve McMonigle—Alternate Project Manager: Mr. McMonigle offers 3 years of disaster management experience. He has served on the following disaster projects: (2024) Hurricanes Helene & Milton—(2022) Hurricane Ian—(2018-2019) Camp Fire—(2017) Hurricane Harvey—(2015-2016) Butte Wildfire Recovery Project.

Scotty Orr—Alternate Project Manager: Mr. Orr offers 4 years of disaster management experience. He has served on the following disaster projects: (2024) Hurricanes Helene & Milton—(2023) Hurricane Idalia—(2018) Hurricane Irma—(2005-2007) Hurricanes Katrina & Rita—(2001) World Trade Center Forensic Recovery.

Mario Vir—Alternate Project Manager: Mr. Vir offers 33 years of disaster management experience. He has served on the following disaster projects: (2018-2019) Camp Fire—(2015-2016) Butte Wildfire Recovery Project—(2014) North Carolina Ice Storm—(1999) Hurricane Lloyd—(1996) Hurricane Fran—(1992) Hurricane Andrew.

Peter Dvoran—Alternate Project Manager: Mr. Dvoran offers over 1 year of disaster management experience He has served on the following disaster projects: (2024-2025) Hurricanes Helene & Milton

Patty Joiner—Project Controls: Ms. Joiner offers 6 years of project controls experience for disaster projects. Her responsibilities include invoice reconciliation, internal data review, subcontractor payment, accounts receivable, subcontract management, and insurance accountability.

Kristi Cosner—Project Controls: Ms. Cosner offers 22 years of project control experience for disaster projects. Her responsibilities include invoice reconciliation, internal data review, subcontract payment, accounts receivable, subcontract management, and insurance accountability.

Alex Clarke—Project Controls: Mr. Clarke offers 4 years of project controls experience for disaster projects. His responsibilities include accounting and finance management, internal data review, accounts payable, and accounts receivable.

Samantha Semach—Estimating: Ms. Semach offers 3 years of disaster experience and has provided estimating expertise for five years. Her responsibilities during activation include administrative support for all projects.

Mike Hoke—Estimating: Mr. Hoke offers 28 years of estimating experience and provides overall estimating support for all projects after activation.

Aryn Gilenson—Field Safety Manager: Mr. Gilenson offers 2 years of disaster safety experience. His responsibilities include internal safety training, subcontractor safety training, environmental compliance, in-field safety supervision, damage assessments, and damage remedy. He has worked on the following projects: (2022) Hurricane Ian.

Jake Hedrick—Field Safety Manager: Mr. Hedrick offers 4 years of disaster safety experience. His responsibilities include internal safety training, subcontractor safety training, environmental compliance, in-field safety supervision, damage assessments, and damage remedy. He has worked on the following projects: (2024) Hurricanes Helene & Milton – (2022) Hurricane Ian—(2014) South Carolina Winter Ice Storm—(2011) State of Alabama Tornado Super Outbreak—(2005) Hurricanes Katrina & Rita.

3.5.3 Resumes

Please find resumes for PJE's core response group in this section. As previously explained, selection of the specific key personnel that would support a disaster debris management mission for the City is not realistic at this time given the fact that the timing and magnitude of a future disaster is not known. However, for a typical response scenario the team would primarily consist of individuals selected from our core response group. The core response group includes the following individuals, from both PJE and other entities within the Phillips family of companies, and detailed resumes are presented on the following pages.

Brian Smallwood
Program Manager
Home Office: Knoxville, Tennessee

PHILLIPS & JORDAN ENVIRONMENTAL

DISASTER EXPERIENCE

Years of Relevant Experience: 14 **Years at the Phillips family of companies: 3**

Brian Smallwood has more than 10 years of experience in disaster relief and debris removal services throughout the southeast and Gulf Coast. His expertise across various facets of local government infrastructure, federal government construction, and state government (FDOT/FDEP), including FEMA contract communications and facilitations. Smallwood has a strong foundation in project management, safety, estimating, scheduling, budgeting, quality control, contract compliance, client relations, documentation, and closeout, and he currently acts as the Program Manager for PJE. He works to maintain and facilitate current client relationships while expanding the regional client base and seeking opportunities for business development investments. Upon activation, Smallwood uses his experience to aid on-site management and subcontractor relations as well as conflict resolution.

NOTABLE DISASTER DEBRIS MANAGEMENT MISSIONS

2024-Present Hurricanes Helene & Milton | Florida, Georgia, South Carolina, and Tennessee

2023 Hurricane Idalia | Hillsborough & Pasco Counties, Florida

2023 Hurricane Ian | Multiple Counties, Florida

2021 Hurricane Ida | St. John Baptist Parish, Louisiana

Sydney Kendrick
Business Manager | Project Controls
Home Office: Knoxville, Tennessee

PHILLIPS & JORDAN ENVIRONMENTAL

DISASTER EXPERIENCE

Years of Relevant Experience: 5 **Years at the Phillips family of companies: 10**

Kendrick has been employed by P&J since 2015 and offers 5 years of disaster response and debris management experience. She's supported P&J's disaster response efforts following 2022 Hurricane Ian in Florida and the 2021 Virginia Winter Ice Storm. Kendrick has a strong foundation in project management, budgeting, quality control, contract compliance, client relations, documentation, and closeout, and currently acts as the Business Manager for PJE. She works to maintain and facilitate current client relationships and contracts while expanding the regional client base and seeking opportunities for business development investments. Upon activation, Kendrick uses her experience to aid off and on-site contract management and subcontractor relations as well as conflict resolution. She will work directly with the client and the monitoring firm for all billing and project closeout procedures.

NOTABLE DISASTER DEBRIS MANAGEMENT MISSIONS

2024-Present Hurricanes Helene & Milton | Florida, Georgia, South Carolina, and Tennessee

2023 Hurricane Idalia | Hillsborough & Pasco Counties, Florida

Morgan Pierce
President, Power | Mission Executive
Home Office: Knoxville, Tennessee

DISASTER EXPERIENCE

Years of Relevant Experience: 21 **Years at the Phillips family of companies: 21**

Pierce has been employed by the Phillips family of companies since 2004 and offers over 20 years of disaster response and debris management experience. In his tenure with P&J he has been integral to shaping the direction of the Disaster Group and PJE's business operations, bonding and risk assessments, and go-to-market strategic approach. He has enhanced and grown the business intelligence and processes to support activations and led client and partner development.

Pierce has also developed proprietary documentation and workflow tool as well as CRM and data projects.

USACE QA/QC Training

Eric Hedrick
Sr. Vice President | Operations Manager
Home Office: Zephyrhills, Florida

DISASTER EXPERIENCE

Years of Relevant Experience: 25 **Years at the Phillips family of companies: 44**

Hedrick has been employed by the Phillips family of companies since 1981 and offers over 15 years of disaster response and debris management experience. This experience includes segregation, removal, and disposal activities relating to complex debris streams on both the public right of way and private property. Most of Hedrick's debris management experience has been on USACE projects pursuant to IDIQ contract structures following disaster events that created some of the most complex debris streams in U.S. history, including the 9/11 Terrorist Attacks and Hurricane Katrina. Hedrick had overall accountability for operations, safety, and quality and has demonstrated qualifications to manage complex contract and subcontract structures in high-profile settings. Hedrick was P&J's Program Manager for the Pacific Gas & Electric Company Hazardous Tree Program. The scope of this work included managing high-hazard trees on public and private property and involved removal and disposal (primarily through beneficial reuse) of large volumes of debris in Northern and Central California. This work began in 2015 following Butte Fire response and has expanded to include 10 additional wildfire response missions (most recently the 2018 Camp Fire in Paradise, CA). Hedrick has also directed these high-profile missions under intense public and regulatory scrutiny and is uniquely qualified to manage the statement of work included in this solicitation.

NOTABLE DISASTER DEBRIS MANAGEMENT MISSIONS

2024-Present Hurricanes Helene & Milton | Florida, Georgia, South Carolina, and Tennessee

Steve Thompson
SVP Safety and Risk | Mission Executive
Home Office: Knoxville, Tennessee

DISASTER EXPERIENCE

Years of Relevant Experience: 25 **Years at the Phillips family of companies: 35**

Thompson has been employed by the Phillips family of companies since 1990 and offers 25 years of disaster response and debris management experience. He is responsible for the overall management of the Phillips family of companies' health and safety program, develops and administers policies and procedures regarding employee safety, investigates project accidents and develops preventative measures, and monitors safety programs implemented by subcontractors. Thompson has served as the lead environmental, safety & health manager or program manager on nearly every significant natural or man-made disaster since 1994. Thompson has conducted disaster recovery preparedness training for the U.S. Army Corps of Engineers and was an active participant in the EM 385-1-1 Safety and Health Manual revisions related to emergency recovery. He also served as a peer review expert for the National Institute for Occupational Safety and Health Emergency Responders Health Monitoring and Surveillance Project.

3.6 Equipment Resources

The Phillips family of companies, with over 70 years in land clearing, infrastructure construction combined with 40 years in disaster response, has an extensive production fleet and related equipment, strategically located at in-house storage and maintenance shops throughout the country, mobilizing quickly regardless of location.

The following table illustrates our owned equipment relevant to the anticipated scope of work. Our full fleet, of both owned and rented equipment, includes more than 2,000 heavy and specialized pieces of equipment, and we maintain national accounts with major equipment vendors to deploy and service equipment as needed. A more comprehensive listing of our owned equipment is available upon request/in Appendix 1.

PHILLIPS & JORDAN ENVIRONMENTAL SERVICES OWNED EQUIPMENT

The following chart lists the company owned equipment that can be used on the City of Destin Disaster Debris Management Project.

This equipment is owned by PJE. It is not leased or owned by subcontractors. Owning such a large equipment fleet makes it easy for PJE to self-perform 100% on projects.

All-Terrain Vehicles

Access is very difficult and ground conditions aren't favorable for walking or regular passenger vehicles. PJE owns the following all-terrain vehicles aka UTVs that will be used to transport workers to and from work sites.

Forwarders

Forwarders are great pieces of equipment used to load and haul out debris from rough terrain. These can drive through wet conditions and tracks can be added to the tires to minimize ground disturbance.

Loaders

The PJE front end loaders listed below are available to haul and load debris. These loaders are capable of accessing ditches and waterways to remove the debris with the most minimal impact to the environment.

Skidsteer Loaders

Skidsteers are one of the most capable pieces of equipment. PJE utilizes these to consolidate debris. Skid Steers have the ability to load and haul debris to the grapple trucks without requiring a large footprint to work off of thus reducing restoration work.

Excavators

As with any debris removal project, excavators are necessary to load and haul large pieces of debris. Many of our excavators have hot saws to cut debris that may be leaning over or in a watershed.

Bucket Trucks

When hazardous trees are outside of reach of the grapple trucks and excavators, bucket trucks are needed.

Cranes

Heavy lifts are sometimes needed. For that purpose, PJE takes pride in owning cranes that are capable of lifting and placing hazardous debris safely.

Trucks

When working on wetland areas, large tire equipment is crucial to haul out debris to the ROW for grapple trucks. The large fleet of PJE off roads trucks can safely transport debris from the wetlands to the ROW. Tracks can also be added to rubber tire equipment to limit site impact.

Sweepers

All ditch and waterway projects have difficult access points and most of those impact the roadways. PJE owns numerous street sweepers to clean the roads where trucks may track mud and other debris.

Mechanic Trucks

Owning as much equipment as PJE does requires full-time maintenance trucks and mechanics to keep them in working order. PJE currently owns 24 trucks that service all company owned equipment. All mechanics are full time P&J employees.

PJE will mobilize within 24 hours of NTP from multiple locations, regardless of the disaster size.

PJE has pre-positioned subcontractors with adequate equipment and a database of pre-registered local subcontractors. More regarding subcontractors can be found in Section 3.7 of this proposal.

3.7 Subcontracting Plan

3.7.1 Subcontract Procurement

We classify our subcontractor strategy into three categories:

- **Key Pre-Positioned Subcontractors**: with whom we have existing Master Subcontract Agreements (MSAs)
- **Pre-Registered Subcontractors:** who meet our insurance and qualifications requirements and have been documented in our internal subcontractor database for potential subcontracts
- **Small & Disadvantaged Business Concerns**: identified following a disaster event.

3.8 Subcontractor Utilization

PJE anticipates approximately 60% of the work will be performed by subcontractors while the rest will be performed by PJE-owned equipment. PJE will perform 100% of the project management.

3.9 Subcontractor Availability – Nationwide

With a substantial number of employees and subcontractors based in Florida, we are well prepared for any situation. Our extensive network also includes many skilled professionals located outside of Florida, ready to be activated immediately in the event of a major, state-wide disaster. This ensures that we can swiftly mobilize additional resources and maintain our commitment to providing exceptional support, no matter how widespread the challenge.

3.9.1 Proposed Subcontractors

Proposed Subcontractors

3.9.2 Proposed Subcontractor – BKW, Inc.

BKW, Inc. (BKW) is a disaster recovery and rebuilding business founded in 2003. BKW began its career in disaster recovery with the Isabel cleanup in 2003, and they have been involved with every major storm since. In several major contracts with P&J, BKW has provided debris-cleaning services for hurricanes, tornadoes, ice storms, flooding, and wildfires. They have supported P&J's management of operations and debris removal with USACE during the California wildfires and the 2011 Alabama Super Tornado Outbreaks. BKW's efforts have also been centered on debris removal and rebuilding New Orleans in the aftermath of Hurricane Katrina.

3.9.3 Proposed Subcontractor – LCS Restoration Services, LLC.

LCS Restoration Services LLC has been providing a variety of contract services for the past 30 years combined with a 24-hour Nationwide emergency response disaster relief service for 16 years, with services provided from West Coast California wildfires to the East Coast & Gulf Coast natural disaster clean-up efforts. LCS provides in-house professional project management teams along with an extensive owned equipment list and work crews as well as a wide variety of quality sub-contract crews that have worked with our team in the past. LCS recognizes the importance of having all resources necessary to efficiently execute the services provided. With all the well-trained staff & supervisors, and proficient office administration LCS's crews get the job done safely, efficiently, and professionally.

3.9.4 Proposed Subcontractor – Specialized Services

Specialized Services is an experienced provider of disaster response relief including debris removal, site management, grinding, haul-off, emergency housing and mobile commands. Specialized Services recently supported PJE on disaster debris removal projects in the State of Georgia in response to Hurricanes Helene and Milton (2024). Additionally, their past experience includes the following disaster related projects: Hurricane Michael: 2+ million cubic yards removed (2018); Hurricane Sally: 850,000 cubic yards removed (2020); Hurricane Ida: Asset Recovery (2021); Hurricane Ian: Lee, Sarasota, and Manatee FDOT: 500,000 cubic yards removed; Punta Gorda, Volusia County, Ft. Myers Beach, Port Orange: 1 million+ cubic yards removed (2022); Hurricane Idalia: 800,000 cubic yards removed, Madison County FDOT (2023);Rolling Fork, MS Tornadoes (2023); Selma, AL Tornadoes (2023); Tallahassee, FL Tornadoes (2024); Hurricane Beryl: Houston, TX (2024); Hurricane Debby: Thomas County, GA (2024).

3.9.5 Proposed Subcontractor – S&K Rome, LLC.

S&K Rome is a Certified Woman Owned Business Enterprise dedicated to disaster debris removal and disposal. Our experience dates back to 2004 after numerous hurricanes devastated Florida (Hurricanes Charley, Frances, Ivan and Jeanne). Shortly after those storms hit, the S&K Rome team did a significant amount of debris removal and disposal in Louisiana in 2005 after Hurricane Katrina devastated the area. Since then, S&K Rome has performed and managed debris removal after the following hurricanes: Rita 2005, Wilma 2005, Matthew 2016, Irma 2017, Michael 2018, Laura 2020, Delta 2020, Zeta 2020, Sally 2020, Ida 2021, Ian 2022, Milton 2024 and most recently Hurricane Helene 2024. S&K Rome is currently a prime subcontractor for Phillips and Jordan on the waterway debris removal project for TEMA in eastern Tennessee. Our fleet currently includes 16 Self Loading Grapple Trucks, 12 Skid Steers, 9 Excavators and 6 Grapple Barges.

3.10 Current Prepositioned Contracts

With the following pre-positioned contracts for disaster debris management services currently held by PJE and our legacy company, P&J, and our proximity to the City of Destin through our regional office in San Antonio, FL we can respond to disaster debris service needs swiftly and efficiently. PJE does not currently hold any contracts in the State of Alabama.

3.11 Proven Track Record of Successful Simultaneous Contract Activation

We have managed simultaneous contract activations in response to disaster events. Our established pool of key and pre-registered subcontractors, including 3,411 based in Florida, allows us to execute multiple simultaneous disaster debris management missions successfully. Some of our legacy team's notable simultaneous contract activations have included:

2005

HURRICANES KATRINA & RITA

Total Value of Contracts: $814,148,321

Secured temporary housing sites for approximately 75 people in Orleans Parish, including power and food.

- *Orleans Parish, Louisiana*
- *City of Gulfport, Mississippi*
- *Mobile County, Alabama*

HURRICANE WILMA

Total Value of Contracts: $37,045,999

Collectively managed removal of more than 17.5 CY of debris during these consecutive disaster response missions.

- *City of Gulfport, Mississippi*

2011

TORNADOES

Total Value of Contracts: $203,859,233

Removed ~4.9 million CY of debris across 24 counties in Northern Alabama. The Alabama tornado response had the largest number of FEMA applicants (41) ever assigned by USACE to a single contractor for a single event.

- *Joplin, Missouri*
- *Monroe County, Mississippi*
- *USACE, Alabama*
- *Wake County, North Carolina*
- *Raleigh, North Carolina*

2017

HURRICANE HARVEY

Total Value of Contracts: $2,530,933

Removed 96,765 CY of debris and 1,424 hazardous trees from 100 miles of storm drainage canals and 13 bayous under a pre-positioned contract in Texas.

- *Houston, Texas*
- *Harris County, Texas*

HURRICANE IRMA

Total Value of Contracts: $54,725,121

Removed more than 3.3 million CY of debris in Florida.

- *Broward County, Florida*
- *Highlands County, Florida*
- *Hillsborough County, Florida*
- *Miami-Dade County, Florida*
- *Palm Beach County, Florida*
- *Pinellas County, Florida*
- *Volusia, Florida*

2022

HURRICANE IAN

Total Value of Contracts: $27,585,513

Mobilized personnel and equipment from heavy civil projects in the region to immediately start emergency road clearing. Responded to 12 clients from coast-to-coast across Florida. Processed more than 1.4 million CY of debris.

- *Hardee County, Florida*
- *Hillsborough County, Florida*
- *Highlands County, Florida*
- *DeSoto County, Florida*
- *Manatee County, Florida*
- *Holly Hill, Florida*
- *New Smyrna Beach, Florida*
- *Flagler County, Florida*
- *Tampa, Florida*
- *Pinellas Park, Florida*
- *North Myrtle Beach, South Carolina*

2024

HURRICANES MILTON & HELENE

Total Estimated Value of Contracts: $300,000,000+

PJE partnered with P&J on this mission to provide staffing, support, oversight, and subject matter expertise in developing process and workflow. This included capturing, executing, and adjusting to mission changes, as well as ensuring data and information integrity for prime and subcontractor payment.

Mobilized over 600 crews and over 50 DMS sites across four (4) states during two (2) consecutive hurricane events. During peak production, 566 trucks were activated for haul-in and haul-out services, and as of December 2024, over 6.8 million CY of vegetative, C&D, mixed, and sedimentary debris were removeds for over 40 clients within the counties and cities listed below.

- *Belleair Beach, Florida*
- *Belleair Shore, Florida*
- *North Redington Beach, Florida*
- *Treasure Island, Florida*
- *Pasco County, Florida*
- *Hillsborough County, Florida*
- *Tampa, Florida*
- *New Smyrna Beach, Florida*
- *Holly Hill, Florida*
- *Flagler County, Florida*
- *Winter Garden, Florida*
- *Highlands County, Florida*
- *Wellington, Florida*
- *DeSoto County, Florida*
- *Indian Shores, Florida*
- *Gulfport, Florida*
- *Hazlehurst, Georgia*
- *Jacksonville, Georgia*
- *Lumber City, Georgia*
- *McCrae-Helena, Georgia*
- *Scotland, Georgia*
- *Alamo, Georgia*
- *Glenwood, Georgia*
- *Jeff Davis County, Georgia*
- *Clinch County-Homerville, Georgia*
- *Appling County, Georgia*
- *Wheeler County, Georgia*
- *Telfair County, Georgia*
- *SCDOT, South Carolina*
- *TDOT - Carter / Johnson / Washington, Tennessee*
- *TDOT - Cocke / Greene / Unicoi, Tennessee*
- *TEMA - Hamblen / Cocke / Greene / Washington / Unicoi / Carter /Johnson Counties, Tennessee*

3.11.1 Pre-Positioned Contracts Proposal Requirement

As demonstrated above, PJE meets the minimum requirement of 3 full-service Disaster Debris Management contracts in place in which we are the primary contractor at least one (1) and have at least two (2) contracts with government entities with a population of at least 10,000 residents.

4 OPERATIONAL PLAN

4.1 Executive Summary

The Phillips family of companies has a proven track record of responding to numerous disastrous events over the past four decades. We have consistently delivered essential services throughout a community's event evolution. Our commitment remains unwavering, and we are determined to reinforce it through our actions.

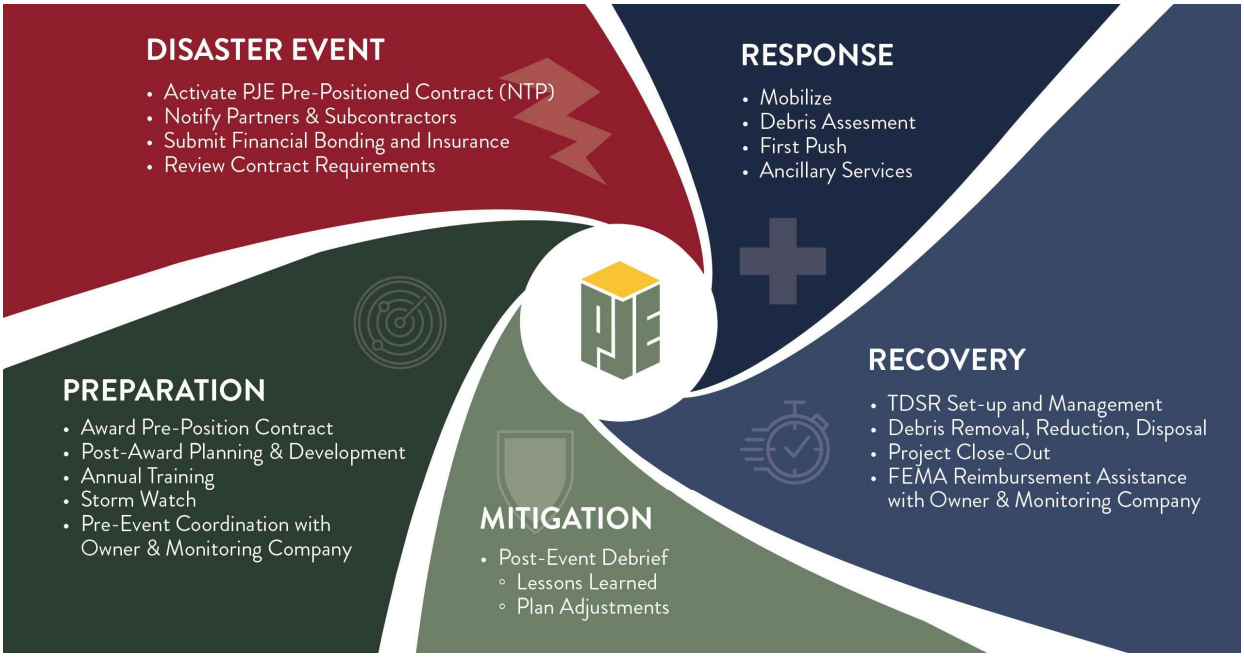
- With an established track record of success, we actively provide effective solutions to impacted communities, ensuring their immediate and long-term needs are met. As a reliable partner in and out of crisis, we are here to support you.

- Our purpose is to support communities when disaster strikes, and we have a clear action plan for their recovery and long-term growth. Through continuous improvement and innovation, we enhance our response capabilities to meet future challenges. We prioritize community resilience and sustainability, offering the necessary resources, services, and expertise to help communities rebuild and thrive.

- Our efforts extend beyond immediate response. We are dedicated to assisting communities throughout the entire event evolution, from preparedness and response to recovery and resilience building. We are committed to listening, learning, and adapting, incorporating valuable feedback and lessons from past experiences to improve our services and exceed community expectations always.

With the enduring presence, ongoing support, and steadfast commitment of the Phillips family of companies, you can rely on us. As we outline our approach to a typical disaster event, rest assured that we will work closely with you to customize our strategy based on the unique attributes of your community and the specific challenges you face.

PJE'S APPROACH TO A DISASTER LIFE-CYCLE



We approach disaster missions as part of a continuous cycle of preparation and response.

4.2 Preparation

Following the award of a pre-positioned contract, PJE's senior management team will meet with City representatives to develop preparedness plans via teleconference or in person. Pre-planning includes but is not limited to identifying proposed Temporary Debris Storage & Reduction Sites (TDSRSs), equipment staging areas, and landfills authorized to receive debris for final disposal, as well as points of contact for stakeholders who would participate in a disaster debris management effort.

We will participate in the City's annual training exercises and continuing education throughout the year to maintain awareness of the most up-to-date practices, policies, and regulations affecting disaster debris management and FEMA reimbursement procedures.

4.2.1 Pre-Event Coordination

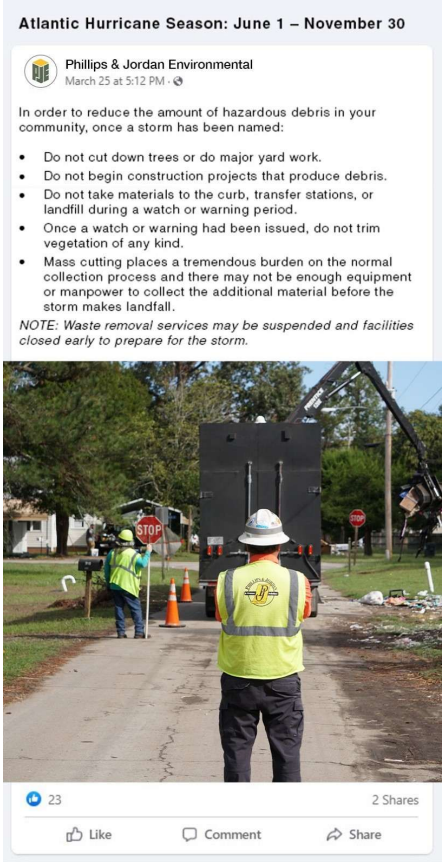
PJE monitors storm development during storm season and plans for potential activation in predictable disaster events. The management team initiates pre-event communication with the City up to 96 hours before the anticipated event to plan for mobilization.

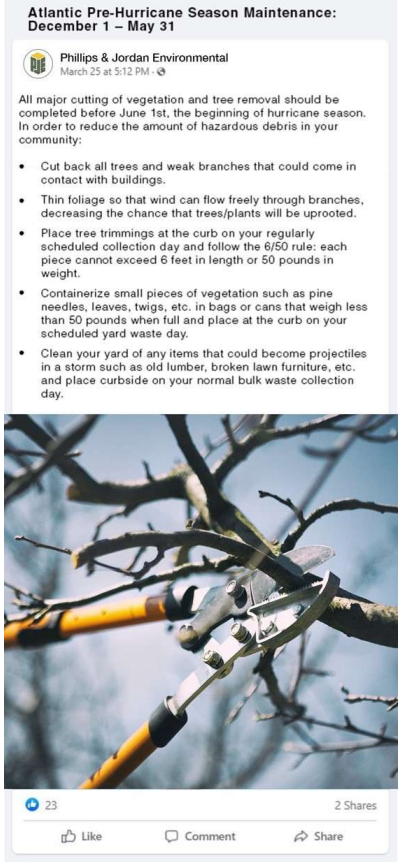
This includes but is not limited to identifying and notifying relevant stakeholders and suppliers, establishing government relationships and contacts, and determining whether the Phillips family of companies has projects nearby that could offer resources or personnel in the event of contract activation.

4.2.2 Community Relations

PJE offers community relations support upon request from the City. Timely and cost-effective disaster debris management depends on educating citizens about their role. Effective dissemination of information reduces client workload and delays/costs. Social media-based public relations campaigns are essential for reaching a large audience inexpensively. Developing a tailored community relations program facilitates efficient communication and recovery efforts before the disaster. With our in-house graphics and video team, we can assist with creating PSAs, using TV, radio, newspapers, billboards, signs, handbills, websites, and social media. We can also develop graphics, audio/visual presentations, print media inserts, and educational programs for community meetings. Real-time updates can be provided through social media posts.

The following are examples of information that could be communicated to the public through a PSA before and after an event.





4.3 Disaster Event

Upon contract activation and issuance of Notice to Proceed (NTP), PJE will initiate mobilization of key management personnel to the Emergency Operations Center (EOC) within two (2) hours, notify partners and subcontractors of contract activation, submit financial bonding and insurance information to the City, and review contract requirements.

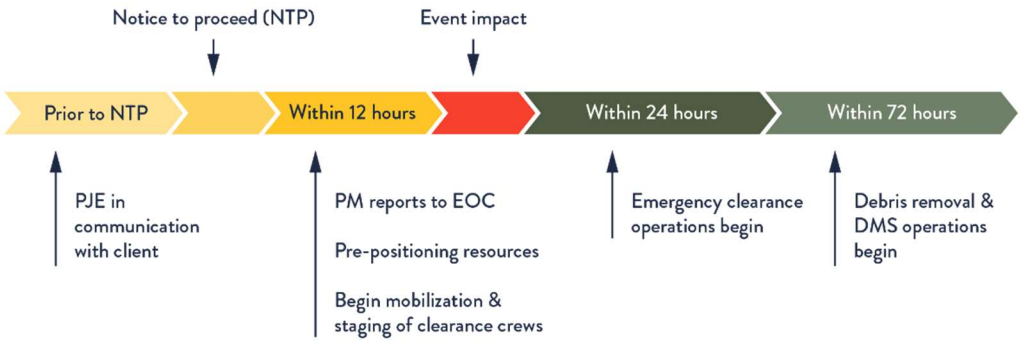


Figure 1: Predictable Event Mobilization Timeline

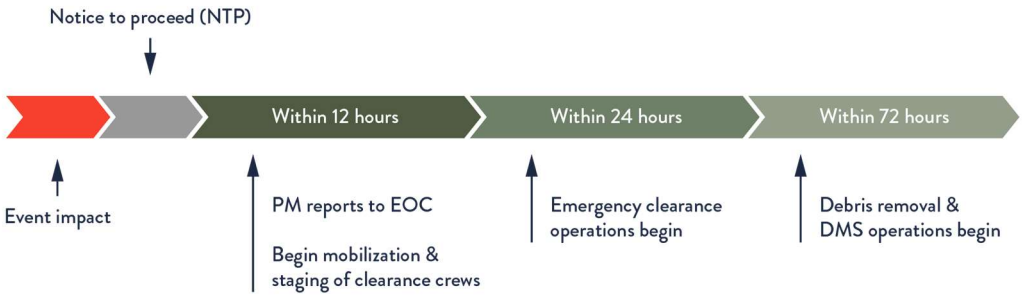

Figure 2: Non-Predictable Event Mobilization Timeline

4.4 Response

The magnitude and predictability of an event affect the timeline of every debris management project. PJE aims to remove debris within 90 days and reduce and dispose within 120 days. The PJE management team (see section 3.5) will work closely with Client representatives to complete debris management activities within FEMA reimbursement timelines. If additional time is needed, we can assist the City with filing for an extension.

4.4.1 Mobilization

From the EOC, the PJE management team will work with City representatives to coordinate resources based on damage assessments and route prioritization for any First Push efforts. We will modify pre-event

sectoring, personnel and equipment, and staging area plans to fit actual site conditions and begin mobilizing subcontractor personnel and equipment.

PJE anticipates the following scale of mobilization of people (management and crews) and equipment (hauling and reduction/grinding) during a small, medium, or large event response.

PJE will work with City representatives to communicate with the public about debris segregation and other project information during debris assessment and mobilization.

Small-Scale Event

	0-48 Hrs	48-72 hrs	90 hrs	1 week	2 weeks

4.4.2 Debris Assessment

PJE will coordinate with City representatives to assess the debris quantity, which will help determine the amount of personnel and equipment needed, the estimated timeline of debris removal, and whether any additional TDRSs could be necessary to speed up operations.

4.4.2.1 Unmanned Aircraft Utilization

P&J utilizes drone surveying technology to optimize efficiency during the first push of an event to photograph difficult terrain, waterways, and ditches. These images will aid in swift action, allowing us to assess debris removal needs and determine an effective and productive approach to addressing recovery efforts. Our unmanned aircraft program is also compliant with FAA regulations.

PJE utilizes FAA compliant drone technology to aid surveying efforts.

4.4.3 First Push

Within 24 hours of NTP, PJE will mobilize first-push crews to begin clearance operations. This emergency road clearance will occur in concert with the debris assessment and focus on maximizing public safety while minimizing further damage to utility systems and public infrastructure. A typical first push crew will consist of one (1) Foreman with a truck, one (1) Equipment Operator with loader or skidsteer, and two (2) Laborers equipped with chainsaws and rakes and supported, if necessary, by several transport trucks.

First Push efforts are considered the first 70 hours following NTP, or roughly three (3) days.

4.4.4 Ancillary Services

PJE can provide the additional essential services, through our dedicated partners, to support your community during disaster events, including but not limited to the following:

- Ice & Water Delivery
- Mobile and Portable Generators/Light Plants
- Mobile Kitchens & Food Service
- Temporary Housing/Shelter
- Mobile Unit Services (Laundry/Restroom/Showers)
- Mobile Office Units
- Emergency Fuel Service
- Temporary Bridges and Barges
- Satellite Telephone Communications
- Community Relations
- Blue Roofing

Some of our valued partners that help us deliver ancillary services.

SAFESIDE EMERGENCY MANAGEMENT SUPPORT
SUNBELT RENTALS
GRANNY'S ALLIANCE
QUALTEK RECOVERY LOGISTICS

4.4.5 The 4G+1 Ranch

PJE is capable of providing auxiliary personnel and management lodging at the 4G+1 ranch in Pasco County, Florida. Located north of State Road 52, the 4G+1 ranch is a 2,950-acre private residence owned by the Phillips family and has access to surplus food, satellite internet, and housing. At its core, PJE is a People First company that prides itself on serving not only the community, but also its workers. As such, we will offer the services of a 49' Frieghtliner food truck belonging to the Phillips family of companies to any auxiliary personnel invited to 4G+1 ranch during disaster efforts. This large, state-of-the art food truck houses an SP500 Southern Pride smoker, fridge, and freezer, stock pot with burners, a griddle, and a large prep area, and has the capacity to feed up to 300.

Additional support from our 49' Freightliner food truck

4.4.6 Strategic Coordination for Project Logistics

PJE will collaborate closely with the City to pinpoint key logistical elements essential for the project's success. This includes identifying optimal locations for equipment staging areas, determining the sites for Temporary Debris Storage and Reduction Sites (TDSRSs), and coordinating lodging arrangements for all involved personnel. By working together with local authorities, PJE aims to ensure a streamlined process, efficient operations, and effective use of resources throughout the project's duration.

Potential Staging Areas:

15017 Emerald Coast Pkwy, Destin, FL 32541

150003 Emerald Coast Pkwy, Destin, FL 32541

981 US-98, Destin, FL 32541

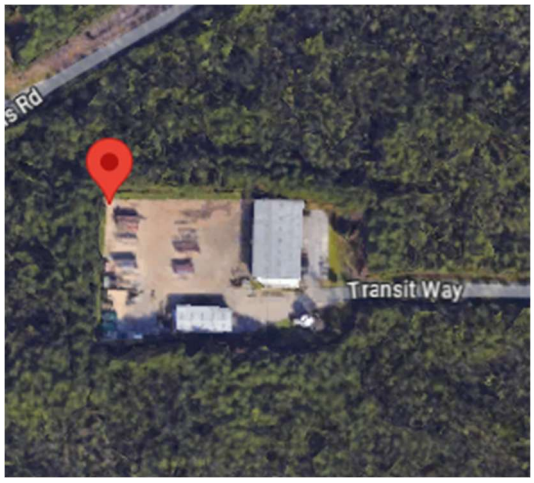
4405 Legendary Dr, Destin, FL 32541

TDSRS Location Provided by the City of Destin:

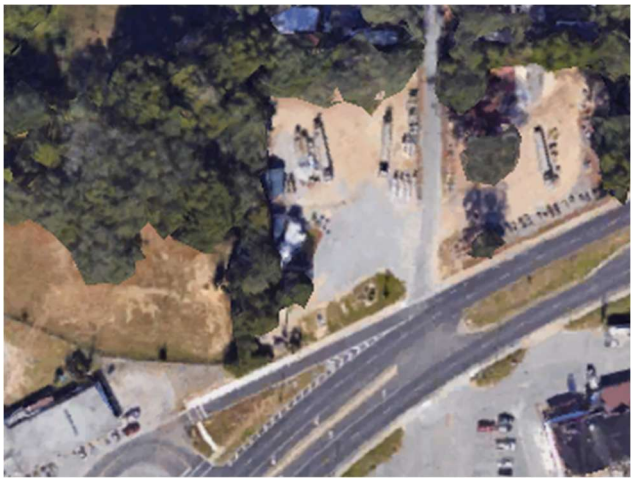
205 Beach Drive, Destin, FL 32541

Potential Landfill/Disposal Sites:

Fort Walton Beach Transfer Station
630 Transit Way



Wright Yard Waste Facility
1671 North Beal Extension



North Okaloosa County Transfer
(Baker Transfer Station)
14115 Charlie Day Road

Walton County Landfill
1118 Institution Road

Potential Lodging:

Homewood Suites
14051 Emerald Coast Pkwy, Destin, FL 32541

Fairfield Inn & Suites
19001 Emerald Coast Pkwy, Destin, FL 32541

Hampton Inn & Suites
1625 Scenic Hwy 98, Destin, FL 32541

Comfort Inn & Suites
4401 Commons Dr E, Destin, FL 32541

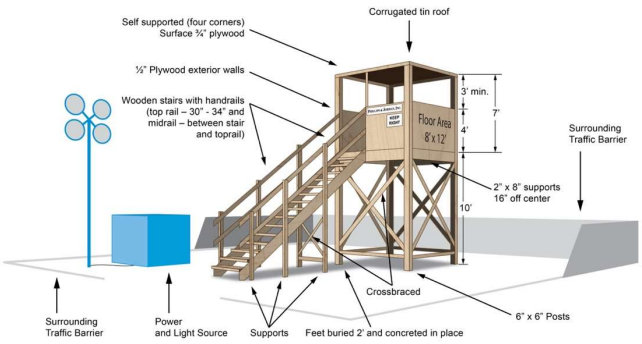
Home2Suites
14060 Emerald Coast Pkwy, Destin, FL 32541

Holiday Inn Express
108 Hutchinson St, Destin, FL 32541

4.5 Recovery

4.5.1 Temporary Debris Storage & Reduction Sites (TDSRSs)

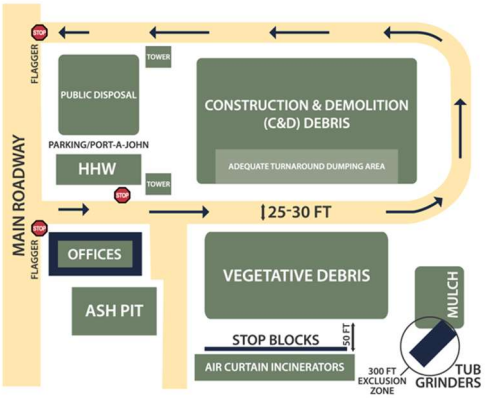
Establishing multiple TDSRSs to accept debris early in the mission schedule significantly improves removal efficiency. At the beginning of each disaster debris management mission, PJE will work with the client to determine or verify TDSRS locations, along with feasibility, operational limitations, and environmental characteristics of each site. If it is necessary to obtain additional TDSRSs, Client representatives will assist with identification and permitting.



PJE will verify or establish Debris Zones and prepare TDSRSs based on these plans. Construction of a TDSRS can be accomplished within 2 days and can include:

- Tower Construction
- Site Set-up
- Site Security
- Baseline Environmental Screening

During this time, the PJE management team will engage a third-party monitoring company to begin certification of haul trucks and safety inspections.



4.5.2 Debris Collection & Removal

Within 72 hours of NTP, PJE will begin collecting and transporting all eligible storm-related debris from public ROWs to TDSRSs or a landfill, as determined by the City.

PJE handles the following classifications of debris:

- Vegetative Debris
- C&D Debris
- Hazardous Trees & Limbs
- Hazardous Stump Removal
- Specialty Debris Removal
- White Goods
- Vehicle & Vessel
- Marine Debris Removal
- Sand/Soil Removal, Screening, & Replacement
- Animal Carcass Removal
- Cadaver Recovery & Identification
- Private Property Debris Removal & Demolition
- Asbestos Containing Material
- Structure Demolition & Removal
- HHW Disposal
- Electronic Waste Disposal
- Freon Removal

LEGACY EXPERIENCE

We collected and processed over 1.4 million cubic yards of vegetative and C&D debris during the 2022 Hurricane Ian disaster debris management

4.5.3 Sandbag Collection and Disposal Debris Reduction

We balance vegetative debris reduction through a combination of grinding, open pit burning, and air curtain incineration to account for current wood chip and mulch markets and landfill capacity. Marketable trees transported to TDSRSs can also be segregated rather than reduced and beneficially reused to produce dimensional lumber, firewood, and landscape timbers.

For C&D debris, we will seek recycling and beneficial reuse opportunities where feasible, including:

- Segregating recyclable building material at curbside for direct transport to recycling locations,
- Loading and transporting mixed C&D to authorized landfills where it is sorted to segregate recyclable building material, and
- Hauling mixed C&D debris to a TDSRS where it can be segregated, reduced, and recycled.

Our preferred approach to C&D reduction is to haul debris to a TDSRS and reduce by compaction, reducing the volume to be

LEGACY EXPERIENCE

We collected and processed over 3,100,000 cubic yards of vegetative and C&D debris during the 2017 Hurricane Irma disaster debris management

LEGACY EXPERIENCE

In 2011, we simultaneously operated over 45 TDSRSs during debris operations in response to the tornado super-outbreak that impacted the state of Alabama and Joplin, Missouri. More recently in 2017, we simultaneously operated 21 TDSRSs in Florida following Hurricane Irma

hauled to a landfill, while still leaving opportunities to beneficially reuse components. This approach reduces disposal fees on average by 50%.

4.5.4 Debris Final Disposal & Haul-Out

Once reduced or processed, PJE will haul all debris materials to their final disposal location, as determined by the City.

4.5.5 Project Close-Out

Upon removal of all debris transported to TDSRSs for reduction, PJE will demobilize equipment; remove inspection towers, fencing, erosion control devices, and signage at each site; and return the site to equal or better condition than before the project start. TDSRS closure is generally accomplished within 30 days of last receipt of vegetative debris.

PJE's Operations Manager will conduct a final closeout inspection of each site with a City representative, who will formally release PJE from site control after conditions meet approval.

Closeout environmental screening will also be performed for each TDSRS after initial site restoration to assess whether operations significantly impacted the soils and/or groundwater, compared to baseline data. If significant differences are found, additional site restoration will be completed to the greatest extent feasible.

4.5.6 FEMA Reimbursement Assistance

Following project close-out, PJE will assist the City and their third-party monitoring firm with relevant reporting and communication to ensure timely and comprehensive FEMA reimbursement for work performed. Our legacy company has successfully managed over 50 FEMA-reimbursed disaster debris management mission contracts, resulting in payments exceeding $300,000,000.

No client has ever been denied reimbursement for work performed.

4.6 Mitigation

4.6.1 Post-Event Debrief

Following the completion of a debris removal mission and TDSRS closeout inspections, our Operations Manager will meet with a client representative to assess how well the pre-event planning modeled actual conditions, address any lessons learned, and determine areas of success as well as potential improvements for future event response plans.

4.6.2 Infrastructure Rehabilitation & Resiliency Improvements

The mission of the Phillips family of companies is to modernize, build, and maintain resilient critical infrastructure. The work of our sister companies, P&J and RowCon, strengthens communities' ability to withstand disasters by ensuring the power grid and water resources infrastructure facilities are fortified against higher winds and flooding risks. As part of the Phillips enterprise, PJE's disaster debris management services are only a piece of the services offered to help prepare for and weather a disaster event. Our understanding of this work makes us uniquely suited to assess not only damage in the moment, but also potential solutions for future events.

4.7 Quality Control

Quality is a core value ingrained in the Phillips family of companies, permeating all aspects of our disaster management response, including employee selection, training, emergency protocols, and service delivery to affected

communities. Our unwavering commitment to quality ensures preparedness to respond with professionalism, expertise, and compassion, tailored to meet the unique needs of each community with care and efficiency.

We obtain this quality through the following:

- Managing and delivering defect-free services performed safely, on time, and within budget.
- Maintaining personal contact with client representatives and engineers to address project issues and recommendations.
- Developing relationships and partnering agreements with subcontractors and suppliers.
- Promoting local labor, subcontractors, and suppliers while monitoring their quality programs and performance.
- Continually monitoring and analyzing performance to identify and implement process improvements.
- Ensuring the competence, development, professionalism, and safety of our employees.
- Recognizing the achievements of our staff and maximizing their potential.
- Documenting lessons learned and applying them to future work.

4.8 Documentation Management

4.8.1 Resource Controls

Orientation is given to all personnel and subcontractors, each receiving a unique ID number and possibly a photo ID card for high-security projects. Equipment is inspected and photographed, and trucks used for hauling debris are assigned a cubic yard capacity and a unique ID number, with ownership documented.

4.8.2 Daily Timecards

Daily timecards will be completed when performing T&M work with information including employee details, equipment ID, date and hours worked, work location, supervisor signatures, and City representative signature.

4.8.3 Client Invoicing

PJE has created controls for disaster debris management that work seamlessly with monitoring company data management systems. We prepare and submit invoices to the City and/or the monitoring company for each billing cycle. We then reconcile all project data, audits (if any), and project closeout with the City administrative personnel and monitoring firm.

4.8.4 Claims Management

PJE assigns a Claims Manager to each debris management mission. The Claims Manager inspects damages and negotiates resolutions with property owners within 48 hours of receiving a damage claim report. After resolution, property owners will sign a damage release and we will provide the City with documentation of all claims, including photos.

4.9 Org Structure

PJE's organizational chart and chain of command can be found in Section 3.5. In addition, PJE's subcontracting plan is presented in Section 3.6

4.10 Safety Program

Our enterprise is committed to having a world-class safety program driven by our desire to put the safety and health of our people first on every project we undertake and every decision the company makes. The following key principles guide our program:

- Strong, committed leadership
- Individual accountability
- Employee involvement and feedback
- Continuous improvement

4.11 EH&S Program Overview

Safety – A Core Value

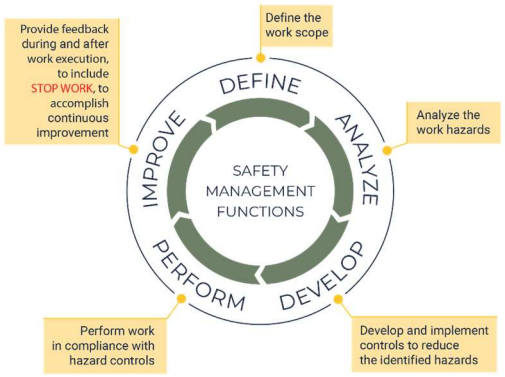
As a People First enterprise guided by a commitment to actively care, we believe a safe workplace and workforce are the only acceptable way to do business - and the only way to take care of the people, the environment, and the communities where we work. This commitment is a fundamental cornerstone of our business and is shared by all our enterprise employees, from executive to craft, as we pursue challenging projects. We embrace individual accountability at all levels, starting with our leadership and extending to our people and subcontract employees. Our Environmental, Health, & Safety (EH&S) Program aims to protect the safety and health of our employees, subcontractors, clients, and the public.

Our program is based on our core values. It is implemented by personal accountability to our policies, protocols, and processes developed from best practices and lessons learned over decades of experience. As we strive for a world-class safety program, we pride ourselves on exceeding regulatory requirements and always calibrating our efforts.

A Systematic Approach to Safety

We systematically integrate safety into management and work practices at all levels, inclusive of all subcontractors. The backbone of our safety approach is comprised of five core safety management functions:

1. Define
2. Analyze
3. Develop
4. Perform
5. Improve



This systematic approach is accomplished by instituting multiple dynamic controls that have proven to be effective over numerous construction projects in the past, while encouraging employee feedback, and routinely engaging our employees in safety education, job planning and preparation. Ongoing programmatic monitoring is conducted to ensure the implementation of all program elements.

A copy of our Environmental, Health, & Safety Plan will be provided upon request.

5 PREVIOUS EXPERIENCE

5.1 Requirement for over 10 Similar Project Experience

The following table illustrates disaster debris management missions completed or due to be completed by our team over the past 10 years.

Note: A scope of work description for all projects listed below includes "Debris Removal Management and Disposal." Projects marked with an asterisk also included "Waterway Debris Management."

Year	Event	Client	Total Debris (CY)
2025	Hurricane Helene Waterways*	TEMA: Hamblen, Cocke, Greene, Washington, Unicoi, Carter, Johnson Counties, TN	~3 million CY, 764,000 lbs HHW, 8,555 Tires, 100 White Goods, 83 Trailers/Vehicles/Vessels

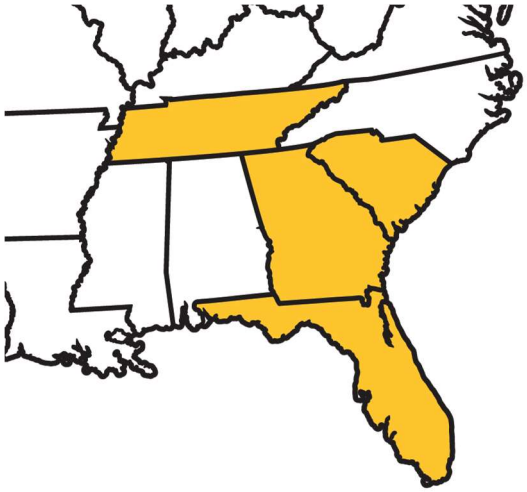
5.3 References

The following pages provides client contact information and detailed descriptions for several projects completed by PJE and our legacy company, P&J, over the past ten (10) years. We encourage the City to contact the references provided herein to obtain feedback on the high quality of our work.

HURRICANES HELENE & MILTON

MULTIPLE CLIENTS IN FLORIDA, GEORGIA, SOUTH CAROLINA & TENNESSEE



Start Date:
October 2024

Completion Date:
Ongoing

P&J's Role:
Prime Contractor

Contract Type:
Unit Price

Debris Volume:
~12.6 million CY of Vegetative, C&D, Mixed & Sedimentary Debris

Amount Invoiced:
Estimated Amount $300,000,000 +

Key Personnel Assigned to Project	Eric Hedrick	Brian Smallwood
	Scotty Orr	Sydney Kendrick
	Morgan Pierce	Heath Stone

P&J is the Prime Contractor overseeing the removal, reduction, and disposal of debris generated by Hurricanes Milton & Helene across four states, 15 counties, and 25 cities. At peak production, P&J had 566 trucks activated for haul-in and haul-out services, and as of December 2024, P&J hauled over 6 million CY of vegetative, C&D, mixed, and sedimentary debris throughout all 4 states.

Total debris volume is still uncertain but anticipated to be in excess of 12.6 million CY of vegetative, C&D, mixed, and sedimentary debris throughout all activations.

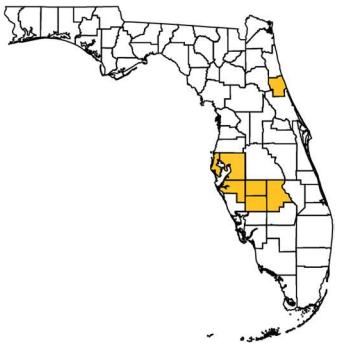
HURRICANE IAN DEBRIS MANAGEMENT

MULTIPLE CLIENTS THROUGHOUT FLORIDA



Start Date:
September 2022

Completion Date:
January 2023

P&J's Role:
Prime Contractor

Contract Type:
Unit Price

Debris Volume:
1,400,000 CY debris removed, hauled, & ground
13,487 additional CY debris hauled without reduction

Dollar Amount Invoiced:
$ 27,655,013

On September 28, 2022, Hurricane Ian made landfall near Cayo Costa Island, Florida as a Category 4 hurricane with maximum sustained winds of over 155 mph. The P&J management team deployed immediately to the affected areas to aid our existing pre-event clients. The team utilized our office in San Antonio, FL just outside the Tampa area. Having ongoing projects throughout the State, we were able to pull personnel and equipment quickly to start the emergency road clearance operation. Once complete with the road clearance operation, the team started the debris removal process. Over the next few days, the P&J team mobilized over a hundred crews and trucks spread out from coast to coast across Florida. Overall, P&J set up and maintained 14 Debris Management Sites to process over 1.4 million cubic yards of debris and cut over 28,000 hazardous trees and limbs.

Debris Removal
Highlands County, Florida

P&J was the Prime Contractor responsible for the removal, reduction and disposal of debris generated by Hurricane Ian utilizing both in-house crews and subcontractors. This included cutting all leaners, hangers and hazardous trees, and debris was reduced by both grinding and burning. P&J targets a minimum of 30% self-performance, with 100% of project management performed by full-time P&J employees.

A few of the clients were in very rural areas making it difficult for monitoring companies to hire locals to participate in the operation. Due to the limited availability of monitors, the P&J management team created pinch points in larger

CONTINUED: HURRICANE IAN DEBRIS MANAGEMENT

MULTIPLE CLIENTS THROUGHOUT FLORIDA

neighborhoods to allow us to continue increasing forces to remove more debris faster without putting additional strain on the monitoring firms limited amount of field personnel.

In areas where debris was limited and subcontractors would struggle to remove enough debris to be profitable, P&J chose to self-perform the work with our own crews involving full-time year-round employees and company owned equipment.

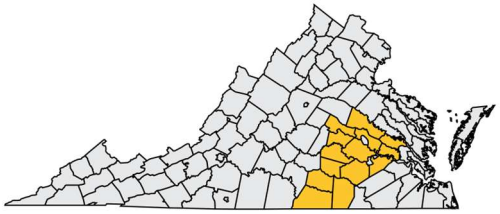
VIRGINIA WINTER STORM RECOVERY

RICHMOND DISTRICT, VIRGINA



Start Date:
February 2021

Completion Date:
June 2021

P&J's Role:
Prime-Contractor

Population: 1.3 Million

Debris Volume:
416,000CY
124,577 Hazard Items

Dollar Amount Invoiced:
$15,936,421

Contract Type:
Unit Price

The Richmond District of the Virginia Department of Transportation (VDOT), which serves 14 counties, activated P&J following an ice storm early in February of 2021. P&J teamed with TetraTech to assist VDOT with the preliminary damage assessment throughout the District. The majority of the damage affected five of the District's counties. A secondary storm hit this area again less than a week after the initial purchase order was issued.

Six (6) DMSs were identified, permitted, prepared, and operated by P&J after the owner-identified sites were determined inoperable. Collection of the 124,577 hazard items began five-days after the second ice storm strike, and loading and hauling of the 416,000 CY of vegetative debris began the following week.

Bucket truck crews cutting leaners and hangers
Richmond District, Virginia

At the peak of operations P&J had 150 active vehicles, with more than 225 registered during the project's duration. More than 110 crews were split between 85 bucket trucks and 35 haul trucks.

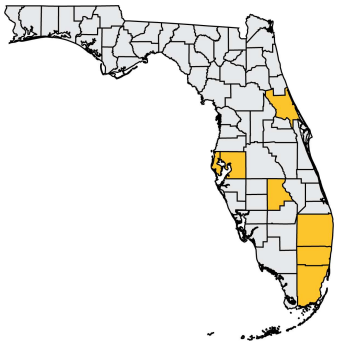
HURRICANE IRMA DEBRIS MANAGEMENT

MULTIPLE CLIENTS THROUGHOUT FLORIDA



Start Date:
September 2017

Completion Date:
April 2018

P&J's Role:
Prime Contractor

Contract Type:
Unit Price

Debris Volume:
3,091,742 CY Veg
62,667 CY C&D
3,310 Hazardous Trees
55,927 Hazardous Limbs
329 Hazardous Stumps

Dollar Amount Invoiced:
$51,706,486

Hurricane Irma followed closely on Hurricane Harvey's heels, threatening U.S. soil only two weeks later. Hurricane Irma was the strongest Atlantic storm outside of the Gulf of Mexico or Caribbean Sea on record, with peak winds of 185 mph. Irma is also the only tropical cyclone on record worldwide to have had winds that intense for so long, having maintained peak intensity for 37 consecutive hours.

Monitoring Tower at DMS
Palm Beach County, Florida

In the days leading up to Hurricane Irma's landfall there was not much certainty about the path she would take, and all of South Florida was on high alert with evacuation warnings for coastal communities on both the east and west coasts. The massive storm ended up making U.S. landfall in Cudjoe Key of the Florida Keys as a Category 4 early on September 10 and then again a few hours later as a Category 3 in Marco Island, in Southwest Florida. Hurricane Irma continued north through Florida, steadily weakening before losing tropical characteristics in Georgia two days later.

In response to Hurricane Irma's Florida landfall and widespread impacts, 25 of P&J's pre-positioned contracts were activated in seven Florida counties (Broward, Highlands, Hillsborough, Miami-Dade, Palm Beach, Pinellas, and Volusia) to assist with emergency road clearance and debris removal, reduction and disposal resulting. During the next four months, P&J collected over 3 million CYs of vegetative debris and over 60,000 CYs of construction and demolition (C&D) debris from a combination of public, private and federal right-of-ways (ROWs) and waterways, as well as from various parks and facilities statewide.

CONTINUED: HURRICANE IRMA DEBRIS MANAGEMENT

MULTIPLE CLIENTS THROUGHOUT FLORIDA

P&J also managed the establishment and operation of 22 debris management sites (DMS) throughout the State of Florida, which reduced the vegetative debris either by grinding down to mulch or burning to save space in local landfills. Based on the specific priorities of our clients, mulch was then taken to final disposal or dedicated for beneficial re-use by spreading the mulch on local agricultural fields or taking it to a power facility to be utilized for woody bio-mass fuel.

P&J also assisted several jurisdictions with their hazardous leaner/hanger/stump programs, which involved the removal of 3,310 hazardous trees, 55,927 hazardous limbs, and 329 stumps.

In total, P&J secured a total of 868 hauling units to complete our contracted work on time and based on the rates in our existing contracts, while other contractors were abandoning pre-established pricing and lobbying their clients for higher rates in an effort to lure hauling resources to their projects. Despite the challenges stemming from the volatile market caused by Hurricane Irma's widespread impact and immediate demand by multiple prime contractors for a finite number of resources throughout the State, P&J maintained our timeline and pricing commitments to both our clients and our subcontractors on all of our activated contracts in Hurricane Irma's wake.

6 FINANCIAL CAPABILITY

6.1 Financial Strength

PJE is a wholly owned subsidiary to Phillips Infrastructure Holdings (PIH). PIH possesses "best-in-class" financial ratios with respect to liquidity and leverage. We maintain our equity at approximately $180MM, our interest-bearing debt-to-equity ratio is targeted between 30% and 35%, and we have more than $100MM in working capital. PJE, as a subsidiary to PIH, brings an additional existing working capital line of credit of $20MM with JPMorgan Chase Bank. Additionally, PIH's surety, Liberty Mutual Surety, currently has in place an aggregate bonding capacity line more than $1.75B, with an individual contract line of $1B which applies to PJE. Please find a letter from PIH's surety confirming our bond capabilities on the following page.

Liberty Mutual Surety

February 28, 2023

Re: **Phillips Infrastructure Holdings**
Bonding Capacity Letter

To Whom It May Concern:

The Liberty Mutual Insurance Company, Boston, MA (Phone 617-357-9500) is proud to currently handle the bonding needs of Phillips Infrastructure Holdings, and have done so for the past 14 years. The Liberty Mutual Insurance Company is a Class XV A "Excellent" AM Best Rated Company, and US Treasury Listed with an underwriting limitation of $1,330,705,000 as listed in the Treasury Circular 570. We are licensed in all fifty states.

We constantly monitor the manner in which Phillips Infrastructure Holdings meets their construction and financial obligations to owners, subcontractors, suppliers and the credit community. We are pleased to report that Phillips Infrastructure Holdings is an extremely strong and stable company in financial terms and handle these obligations in an exemplary manner.

While we would certainly give consideration to higher limits should specific conditions require doing so, we currently have in place for Phillips Infrastructure Holdings a single program exceeding $1,000,000,000 with an aggregate exceeding $1,750,000,000 bonding line, with approximately $1,000,000,000 available capacity. We anticipate no problems in issuing 100% Performance and Payment Bonds for any project Phillips Infrastructure Holdings chooses to pursue.

Naturally, the decision to issue performance and payment bonds is a matter between Phillips Infrastructure Holdings and Liberty Mutual, and that decision will be subject to our standard underwriting at the time of the final bond request, which will include but not be limited to the acceptability of the contract documents, bond forms, and financing. We assume no liability to third parties or to you if for any reason we do not execute said bonds.

Should you have questions or if we may be of assistance, please feel free to contact us.

Sincerely,

Mike Coale

CHASE

April 2, 2025

Mrs. Avis Phillips
Phillips Infrastructure Holdings/Phillips and Jordan
10201 Parkside Dr. Suite 300
Knoxville, TN 37922

Dear Avis:

The purpose of this letter is to confirm that Phillips Infrastructure Holdings/Phillips and Jordan has been a customer of JPMorgan Chase Bank, N.A. (the "Bank") for 20 years. The Bank has provided project financing to Phillips Infrastructure Holdings/Phillips and Jordan in the past for its disaster recovery efforts relating to ice storms, hurricanes, tornadoes and the World Trade Center disaster. Specifically, the Bank provided financing to Phillips Infrastructure Holdings/Phillips and Jordan in the amount of $100,000,000 with respect to the Hurricane Katrina disaster, as well as $65,000,000 with respect to the tornadoes that occurred in Alabama. As of the date of this letter, Phillips Infrastructure Holdings/Phillips and Jordan has $20,000,000 available through its working capital line with the Bank and is utilizing other project related financings in the mid-eight figures. Phillips Infrastructure Holdings/Phillips and Jordan has maintained depository accounts with the Bank for 20 years. During the 20 year period of the Bank's depository and financing relationship with Phillips Infrastructure Holdings/Phillips and Jordan, it has operated its depository accounts and financing relationships in a satisfactory manner.

The information in this letter is provided as an accommodation to you. This letter and any information provided in connection herewith are furnished on the condition that: (a) they are strictly confidential (provided that this letter and any information provided in connection herewith may be shared in connection with bids on business Phillips Infrastructure Holdings/Phillips and Jordan is pursuing), (b) no liability or responsibility whatsoever in connection herewith shall attach to the Bank or any of its officers, employees, or agents, (c) this letter makes no representations regarding the general condition of the company named herein, its management, or its future ability to meet its obligations, and (d) information provided in this letter or in connection herewith is subject to change without notice.

Please be advised that this letter refers only to facts as they exist as of the date of this letter and the Bank shall have no duty or obligation to inform the addressee hereof, or any other permitted recipient of this letter and any information provided in connection herewith, of any future changes in such facts. This letter is solely for the benefit of the addressee, and may not be relied on by any other person or for any other purpose.

Do not hesitate to contact me at (865) 719-4611 if you have any further questions.

RODEFER MOSS

Independent Auditors' Report

To the Board of Directors
Phillips Infrastructure Holdings, Inc.
Knoxville, Tennessee

Opinion

We have audited the accompanying consolidated financial statements of Phillips Infrastructure Holdings, Inc. and subsidiaries (collectively, the "Company"), which comprise the consolidated balance sheets as of December 31, 2023 and 2022, and the related consolidated statements of income, changes in stockholders' equity, and cash flows for the years then ended, and the related notes to the consolidated financial statements.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2023 and 2022, and the results of their operations and their cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern within one year after the date that the consolidated financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are

considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.
In performing an audit in accordance with generally accepted auditing standards, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control related matters that we identified during the audit.

Report on Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the consolidated financial statements as a whole. The supplementary schedules on pages 23 through 25 are presented for the purpose of additional analysis of the consolidated financial statements rather than to present the financial position, results of operations, and cash flows of the individual companies, and are not a required part of the consolidated financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the consolidated financial statements. The information has been subjected to the auditing procedures applied in the audit of the consolidated financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the consolidated financial statements or to the consolidated financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the consolidated financial statements as a whole.

See notes to consolidated financial statements.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation - The consolidated financial statements of Phillips Infrastructure Holdings, Inc. include the wholly-owned subsidiaries of Phillips & Jordan, Inc., RowCon, LLC, and National Fleet Services, LLC (collectively, the "Company"). All significant intercompany transactions and balances have been eliminated.

Company Activities and Operating Cycle - Phillips Infrastructure Holdings, Inc. is principally in the business of providing management functions and oversight to the wholly owned subsidiaries described above, where these wholly owned businesses are principally in the business of construction, transportation, and equipment rental.

Phillips & Jordan, Inc. ("PNJ") is a contractor engaged principally in the business of heavy civil construction, right of way infrastructure construction, industrial site preparation, and disaster response throughout the United States of America.

RowCon, LLC ("ROW") is a nationwide specialty contractor performing right of way services for the power and pipeline markets. ROW specializes in matting supply installation and removal; access road and crane pad construction; vegetative debris clearing, grinding, and disposal; culvert and bridge installation; substation site grading and preparation; and other general projects.

National Fleet Services, LLC ("NFS") is a transportation and equipment rental company in the state of Delaware. NFS is principally in the business of providing transportation services and heavy equipment rental to the construction industry throughout the United States of America.

The lengths of the construction contracts vary, but are typically less than one year. As of December 31, 2023, the Company did have significant contracts that are long-term in nature. Accordingly, certain contract related assets and liabilities are classified as current while others are classified as noncurrent.

Revenue Recognition from Construction Contracts - The Company reports revenues from construction contracts in accordance with Accounting Standards Update ("ASU") 2014-09, "*Revenue from Contracts with Customers*," (ASC Topic 606"). Under this method, the Company follows the five-step model provided by ASC Topic 606 in order to recognize revenue in the following manner: 1) Identify the contract; 2) Identify the performance obligations of the contract; 3) Determine the transaction price of the contract; 4) Allocate the transaction price to the performance obligations; and 5) Recognize revenue as appropriate.

Revenues from contracts, including a portion of estimated profit, are recognized as good or services are provided, based on costs incurred and estimated total contract costs using the cost-to-cost measure of progress method. Under this method, revenue is recognized in relation to the ratio of costs incurred to total estimated costs. This method is used because management considers it the best available measure of progress.

Multiple promises to transfer individual goods or services may exist within a single contract; however, critical integration or interrelated commitment of such goods and services is typically necessary in order to deliver a completed project. As such, management typically considers the Company's contracts to have a single performance obligation.

Contract costs include direct material, equipment, labor, other direct costs, estimated warranty costs, and indirect costs related to contract performance, such as indirect labor, supplies, insurance, equipment repairs, and depreciation.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Revenue Recognition from Construction Contracts - (Continued) - Changes in job performance, conditions, and estimated profitability, including those arising from contract penalty provisions and final contract settlements, may result in revisions to contract revenues. Certain contracts also include variable consideration provisions, which could also result in adjustments to transaction prices and contract revenues. Estimates for variable consideration are included in transaction pricing only when adjustments are probable, as circumstances evolve, or when uncertainties are resolved.

Adjustments to transaction prices and contract revenues are recognized during the period when realization is assured, and the amount can be reasonably determined. Provisions for estimated losses on uncompleted contracts are made in the period in which the losses are measurable. Because of the inherent uncertainties in estimated costs, it is reasonably possible that the estimates used will change within the near term.

Revenue Recognition from Leasing - Revenues from leasing the Company's assets through providing transportation or renting heavy equipment are recorded at the time services are rendered. Leasing agreements include rates for hourly, daily, weekly, or monthly use. Revenues are generated in relation to the reported usage and any additional monthly costs incurred on the Company's assets and recognized on a monthly basis as earned, regardless of the timing of billing. Invoices are due within 30 days of issuance. All leasing revenue earned is from intercompany activity, and is eliminated on the consolidated financial statements.

Contracts Assets and Liabilities - Contract assets and liabilities are defined by ASC Topic 606 and generally exist in conjunction with contracts while they are in process. Contract assets and liabilities generally do not represent significant financing tools and include the following components:

- Costs and earnings in excess of billings ("Underbillings"). Underbillings (also referred to as work in process) are assets representing the estimated value of unbilled work for projects with performance obligations recognized over time.

- Billings in excess of revenue recognized ("Overbillings"). Overbillings are liabilities representing billings that the Company is entitled to invoice contract owners (and receive payment for) in advance of completing certain related contract work.

- Retainage due from contract owners. Generally, the Company does not consider retainage withheld from progress billings as unconditional rights to payment until certain contractual milestones or performance obligations are reached (typically substantial completion). Accordingly, retainage withheld is generally considered a component of contract assets or liabilities until final billed to the customer.

Certain contracts contain components representing both contract assets and contract liabilities. ASC Topic 606 requires aggregation of such assets and liabilities at the contract level, but not at the performance obligation level within individual contracts.

Cash and Cash Equivalents - For purposes of the Consolidated Statements of Cash Flows, the Company considers investments readily convertible into cash without significant loss due to penalties or interest and deposits in banks to be cash and cash equivalents.

Billings Due on Contracts - Billings due on contracts are based on contracted (or estimated) transaction prices and contracted payment terms, and represent unconditional rights to consideration subject only to the passage of time and application approval. Delinquent receivables are written off based on individual credit evaluation and specific circumstances of the customer. The Company has contract terms ranging from 30 to 90 days, balances outstanding past these terms are considered past due; however the Company does not accrue late fees or interest income on past due amounts.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Billings Due on Contracts – (Continued) - The Company adheres to ASC 326, Financial Instruments – Credit Losses, in assessing its accounts receivable for expected credit losses. Management's assessment of expected credit losses includes historical loss information, credit and circumstance evaluations of its customers, and current - and expected economic, market and industry factors affecting the Company's customers based on reasonable and supportable forecasts. The Company may also establish an allowance for credit losses for specific receivables when it is probable that the receivable will not be collected, and the loss can be reasonably estimated. Management writes off potentially uncollectible accounts to the allowance once all collection efforts have been exhausted. As of December 31, 2023 and 2022, management has established an allowance for credit losses specifically to billings due on contract of $35,677 and $116,798.

Insurance Claims - The Company has experienced extreme weather causing delays and rework related to one of the Company's contracts. The significance of the weather constituted the need to file an insurance claim held for this type of event. Management elected to track the effects of this claim separate from the job to ensure the tracking goes smoothly, as well as to track the actual costs for productive work on the project. As of December 31, 2023 and 2022 amounts recorded by management on these insurance claims were $0 and $4,494,982, respectively. During the year ended December 31, 2023 the claims outstanding at December 31, 2022 were collected.

Inventory - Inventory is stated at the lower of cost or market and consists primarily of repair parts and computers to be used by the Company. Management has determined that no inventory obsolescence reserve is required as of December 31, 2023 and 2022.

Property and Equipment - Property and equipment are recorded at cost. The cost of property and equipment is depreciated using either straight-line or accelerated methods and includes salvage values based on historical values of equipment at disposition. Such methods are determined based upon the estimated useful lives and estimated timing of repair costs of the respective assets as follows:

Buildings and improvements	4-40 years
Construction equipment	2-7 years
Transportation equipment	3-5 years
Shop equipment	3-5 years
Aircraft	15 Years
Office furniture and equipment	1-7 years
Information systems	2-5 years

When assets are retired or otherwise disposed, the cost and related accumulated depreciation are removed from the account and any resulting gain or loss is recognized in operations for the period.

Income Taxes - The Company has elected to be taxed under Subchapter S of the Internal Revenue Code. Accordingly, items of income and deductions are passed through to the stockholders who are responsible for payment of any federal income taxes thereon.

The Company is not classified as a Subchapter S corporation in certain states; therefore, related state income taxes are incurred at the corporate level. State income taxes are reported in accordance with accounting principles generally accepted in the United States of America which require the establishment of deferred tax accounts for all temporary differences between book and tax basis apportioned to these states. In addition, deferred tax accounts must be adjusted to reflect new rates if enacted into law.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Income Taxes - (Continued) - The principal accounting method used by the Company for tax reporting purposes is the cash receipts and disbursements method, which applies to short-term construction contracts (as defined by the Internal Revenue Code). The Company recognizes income from long-term construction contracts on the percentage-of-completion method and from residential construction contracts on the completed contract method.

Deferred taxes are recognized for differences between the basis of assets and liabilities for financial reporting and income tax purposes. The differences relate principally to differences in methods for the recognition of gross profit on contracts and from differences in methods for reporting depreciation. All deferred tax assets and liabilities are classified as non-current.

The Company periodically evaluates any uncertain tax positions that might exist. Accordingly, a loss contingency is recognized when it is probable that a liability has been incurred as of the date of the financial statements and the amount of the loss can be reasonably estimated. The amount recognized is subject to estimates and management judgment with respect to the likely outcome of each uncertain tax position. The amount that is ultimately sustained for an individual uncertain tax position or for all uncertain tax positions in the aggregate could differ from the amount recognized. Although the tax years ending December 31, 2020 through December 31, 2023 remain open for examination by various taxing authorities, it is management's opinion that no significant uncertain tax positions exist at December 31, 2023.

Advertising - The costs of advertising, promotion and marketing programs are charged to operations in the year incurred. The Company recorded advertising expense of $536,026 and $473,015 as of December 31, 2023 and 2022, respectively.

Health Insurance Benefits - The Company employs a self-insurance strategy to provide health insurance benefits to its employees, for the first $125,000. The Company relies on CIGNA as a third party administrator, and currently maintains a reinsurance policy for claims in excess of $125,000 in a single policy year.

Commercial Insurance - The Company is a member of American Contractor Insurance Group, LTD (hereinafter referred to as "ACIG") which provides for losses related to workers' compensation, general liability, and auto claims. Beyond certain limits, the programs provide that members are jointly and severally liable for unpaid claims in all years that the Company is a member. Based upon the excess insurance coverage provided within ACIG for specific and aggregate losses and the financial condition of ACIG, and its members, management considers any contingent liabilities to be insignificant at December 31, 2023. As a member of ACIG, the Company retains a minority equity interest, which is accounted for using the cost method of accounting. Included in other assets is the initial equity investment of $75,000.

Use of Estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could vary from the estimates that were used.

Concentrations of Credit Risk - Financial instruments which potentially subject the Company to concentrations of credit risk are primarily cash and cash equivalents and accounts receivable. The Company's cash deposits are placed in highly rated financial institutions and are applied to balances outstanding on the line-of-credit on a daily basis.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Concentrations of Credit Risk – (Continued) - Cash and cash equivalents are maintained at financial institutions and, at times, balances may exceed federally insured limits. The Company has never experienced any losses related to these balances. As of December 31, 2023 and 2022, amounts on deposit in excess of federally insured limits approximated $76,000,000 and $45,000,000, respectively.

The Company's customer base consists of customers located throughout the United States. The Company performs ongoing credit evaluations of its customers' financial condition, generally perfect lien rights as collateral from its customers, and maintains a reserve for potentially doubtful accounts. Although the Company is directly affected by the well-being of the construction industry, management does not believe significant credit risk exists at December 31, 2023.

Reclassifications - Certain reclassifications have been made to the 2022 balances in order to conform to the 2023 presentation with no effect on the previously reported net income or stockholders' equity.

Recently Adopted Accounting Pronouncements - Effective January 1, 2023, the Company adopted FASB ASC 326, *Credit Losses*. The new standard requires entities to measure credit losses for certain financial assets, including accounts receivable, by replacing the historical "incurred loss" approach with an "expected loss" model. The current expected credit loss ("CECL") model requires entities to assess current and expected conditions, supported by reasonable forecasts, in addition to historical information to estimate the lifetime losses of certain financial assets recorded at an amortized cost basis. Expected credit losses are recorded through an allowance for credit losses.

The Company adopted ASC 326 using the modified retrospective method, which requires the Company to apply the new credit loss standard through a cumulative effect adjustment to the beginning balance of retained earnings, if necessary, as of the first reporting period in which the standard is effective.

The adoption of FASB ASC 326 did not have a material impact on the Company's results of operations or cash flows.

Date of Management's Review - Management has evaluated events and transactions occurring subsequent to the balance sheet date for items that should potentially be recognized or disclosed in these financial statements. The evaluation was conducted through the date of the independent auditors' report, which is the date these financial statements were available to be issued.

NOTE 2 - BILLINGS DUE ON CONTRACTS

Billings due on contracts represent amounts for performance obligations that have been billed but not yet collected, net of retainage. Billings due on contracts as of December 31, 2023 and 2022 consisted of:

	Outstanding Less Than 90 Days	Outstanding Greater Than 90 Days	2023	2022
Completed contracts	$ 15,559,190	$ 1,408,972	$ 16,968,162	$ 2,623,889
Uncompleted contracts	99,969,496	546,321	100,515,817	133,985,436
Allowance for doubtful accounts	-	(35,677)	(35,677)	(116,798)
Billings due on contracts, net	$ 115,528,686	$ 1,919,616	$ 117,448,302	$ 136,492,527

NOTE 2 - BILLINGS DUE ON CONTRACTS – (Continued)

As of December 31, 2023, management is negotiating the value of various claims based on work previously performed. Management does not recognize revenue on outstanding claims or change orders in excess of cost until approved. Management does not anticipate that the outcome of the claims will negatively impact net income. Through the date of the independent auditors' report, $89,525,984 (76%), of billings due on contracts as of December 31, 2023 had been collected.

Activity in the allowance for doubtful accounts for the periods indicated is as follows:

	2023	2022
Allowance for doubtful accounts at the beginning of the year	$ 116,798	$ 229,598
Provision for doubtful accounts	33,031	25,000
Amounts charged against the allowance	(114,152)	(137,800)
Allowance for doubtful accounts at the end of the year	$ 35,677	$ 116,798

NOTE 3 - UNCOMPLETED CONTRACTS

As explained in Note 1 above, the Company recognizes revenue from construction contracts on the cost-to-cost measure of progress method. Information concerning uncompleted contracts is as follows:

	2023	2022
Costs incurred	$ 865,791,318	$ 821,068,309
Estimated earnings thereon	199,318,363	172,470,191
Contract revenues	$ 1,065,109,681	$ 993,538,500
Billings to date (inclusive of retainage)	$ 1,078,381,986	$ 1,041,559,784
Components of contract assets and liabilities		
Underbillings	$ 24,523,405	$ 12,465,764
Overbillings	(37,795,709)	(60,487,048)
Retainage due from contract owners, completed contracts	5,597,956	6,766,714
Retainage due from contract owners, uncompleted contracts	35,450,735	37,089,966
Retainage due from related party, uncompleted contracts	-	8,428,139
Net contract assets	$ 27,776,387	$ 4,263,535

Presented in the accompanying balance sheets as follows:

	2023	2022
Contract assets, current	$ 63,815,455	$ 44,766,194
Contract assets, noncurrent	1,756,641	19,984,389
Contract liabilities	(37,795,709)	(60,487,048)
Total contract assets	$ 27,776,387	$ 4,263,535

NOTE 3 - UNCOMPLETED CONTRACTS – (Continued)

The following is a reconciliation of the Company's backlog, which represents signed contracts in existence at December 31, 2023.

Balance at December 31, 2022	$ 568,540,192
New contracts and adjustments	943,741,076
	1,512,281,268
Less contract revenues earned for the year ending December 31, 2023	(737,067,705)
Balance at December 31, 2023	775,213,563
New contracts obtained subsequent to December 31, 2023	66,990,751
Balance as of report issuance date	$ 842,204,314

NOTE 4 - PROPERTY AND EQUIPMENT

At December 31, 2023, property and equipment consisted of:

	Cost	Accumulated Depreciation	Net Book Value
Buildings and improvements	$ 2,732,115	$ 2,175,875	$ 556,240
Construction equipment	166,006,130	79,857,532	86,148,598
Transportation equipment	39,099,503	25,016,356	14,083,147
Shop equipment	939,597	934,205	5,392
Aircraft	9,704,500	339,658	9,364,842
Office furniture and equipment	3,624,791	3,321,579	303,212
Information systems	240,556	240,556	-
	222,347,192	111,885,761	110,461,431
Construction in process	160,070	-	160,070
	$ 222,507,262	$ 111,885,761	$ 110,621,501

NOTE 4 - PROPERTY AND EQUIPMENT – (Continued)

At December 31, 2022, property and equipment consisted of:

	Cost	Accumulated Depreciation	Net Book Value
Buildings and improvements	$ 2,732,115	$ 1,491,589	$ 1,240,526
Construction equipment	143,888,807	64,670,268	79,218,539
Transportation equipment	38,683,703	24,180,039	14,503,664
Shop equipment	939,596	934,205	5,391
Aircraft	11,950,000	2,151,000	9,799,000
Office furniture and equipment	3,394,823	3,078,643	316,180
Information systems	240,556	217,955	22,601
	201,829,600	96,723,699	105,105,901
Construction in process	1,500,000	-	1,500,000
	$ 203,329,600	$ 96,723,699	$ 106,605,901

The Company recorded $41,274,305 and $35,032,245 in total equipment acquisitions as of December 31, 2023 and 2022, respectively, included in investing activities and supplemental disclosure of noncash activity on the statement of cash flows.

NOTE 5 - CASH, CASH MANAGEMENT CLEARING, AND CREDIT FACILITY

At December 31, 2023 and 2022, outstanding checks of $199,614 and $195,794, respectively, had not been presented for payment by the bank and are reflected as "Cash management clearing" on the consolidated balance sheets.

Phillips & Jordan, Inc. maintains a $20,000,000 credit facility with a bank, which provides for the daily replacement of cash accounts for disbursement clearing requirements. The line of credit bears interest at the adjusted SOFR rate plus 0.10% + 1.25% (6.73% at December 31, 2023), expires December 15, 2024 and is secured by substantially all corporate assets with the exception of real estate. There were no outstanding balances on this line as of December 31, 2023 and 2022. There were no borrowings or repayments during 2023 or 2022.

NOTE 6 - LEASES

Lessor - As discussed in Note 1, National Fleet Services, LLC is in the business of providing rental of transportation and heavy equipment. These rentals are made through short term leasing arrangements of hourly, daily, weekly, or monthly use. The Company maintains assets, accounted for in Note 4, that are available to lease through operating leases. The total net book value of equipment available for lease of $86,711,318 is included in National Fleet Services' balance sheet. National Fleet Services' revenue on operating leases is in accordance with ASU 842.

NOTE 6 – LEASES – (Continued)

Lessee - As discussed in Note 1, the Company records lease activity in accordance with ASC 842. The Company determines if its contractual agreements contain a lease at inception. A lease is identified when a contract allows for the right to control an identified asset for a period of time in exchange for consideration. The Company's lease agreements consist of operating leases for office buildings and heavy equipment. The Company does not have material financing leases.

The Company's operating leases are included on the balance sheets as right-of-use lease assets and lease liabilities. A right-of-use lease asset represents the right to use an underlying asset over the term of a lease, while a lease liability represents the obligation to make lease payments arising from the lease. Current and noncurrent lease liabilities are recognized on commencement date at the present value of lease payments. Right-of-use lease assets are also recognized on the commencement date as the total lease liability plus and/or minus prepaid rents, deposits, and lease incentives, if any. As the Company's leases typically do not provide an implicit rate, it uses its fully collateralized incremental borrowing rate based on the information available at commencement date in determining the present value of lease payments. The incremental borrowing rate is influenced by market interest rates, credit ratings, and lease term and as such, may differ for individual leases.

The Company's lease agreements typically do not contain variable lease payments, residual value guarantees, purchase options, or restrictive covenants. The Company's leases may include the option to renew for a period of months to several years. The term of the Company's leases may include the option to renew when it is reasonably certain that the option will be exercised. If a lease agreement contains lease components (e.g., payments for rent) and non-lease components (e.g., payments for excess usage), it is all accounted for as a single lease component.

Information regarding lease expense, remaining lease term, discount rate, and other select lease information is presented below as of and for the year ended December 31, 2023:

	Phillips Infrastructure Holdings, Inc.	Phillips and Jordan, Inc.	National Fleet Services, LLC	Total

A summary of the maturity of lease liabilities as of December 31, 2023 is as follows:

	Phillips Infrastructure Holdings, Inc.	Phillips and Jordan, Inc.	National Fleet Services, LLC	Total
Year ended December 31,				
2024	$ 2,437,935	$ 199,218	$ 1,445,445	$ 4,082,598
2025	2,513,119	110,675	556,293	3,180,087
2026	2,590,631	61,311	374,929	3,026,871
2027	2,670,543	-	388,051	3,058,594
2028	2,752,929	-	401,633	3,154,562
Thereafter	39,824,972	-	2,229,125	42,054,097
Total minimum lease payments	52,790,129	371,204	5,395,476	58,556,809
Less: amounts representing interest	(8,305,020)	(12,305)	(1,255,607)	(9,572,932)
Present value of lease liabilities	$ 44,485,109	$ 358,899	$ 4,139,869	$ 48,983,877

RowCon, LLC had two office leases that expired during 2022. During 2023, these leases rolled into a month-to-month status. RowCon, LLC recorded lease expense of $20,931 and $18,212 for the years ended December 31, 2023 and 2022, respectively. The leases are short-term and are not subject to capitalization under ASC 842.

NOTE 7 - INSTALLMENT NOTES PAYABLE

Installment notes payable at December 31, 2023 and 2022 consisted of:

	2023	2022
Note payable to a bank due in monthly aggregate payments of $1,057,509 of principal and interest ranging from 2.35% to 4.73%, secured by equipment, with maturities through August 2027.	$ 21,376,103	$ 33,640,296
Note payable to a bank due in monthly payments of $82,608 of principal and interest of 5.25%, secured by an aircraft, with maturities through June 2028.	7,315,819	-
Notes payable to an equipment financing company due in monthly aggregate payments of $248,296 of principal and interest ranging from 2.25% to 2.99%, secured by equipment, with maturities through November 2026.	6,839,700	9,624,918
Note payable to a bank due in monthly payments of $117,775 of principal and interest at 3.28%, secured by an aircraft, paid off in current year.	-	7,318,039
Note payable to a bank due in monthly payments of $7,969 of principal and interest at 0.00%, secured by equipment, matures June 2025.	124,144	-
Note payable to an equipment financing company due in monthly aggregate payments of $48,204 of principal and interest at 4.25%, secured by equipment, matures March 2024.	143,593	702,973
Note payable to an equipment financing company due in monthly aggregate payments of $86,392 of principal and interest at 0.00%, secured by equipment, with maturities through November 2026.	2,380,525	1,825,712
	38,179,884	53,111,938
Less installments due within one year	15,365,801	17,425,350
	$ 22,814,083	$ 35,686,588

NOTE 7 - INSTALLMENT NOTES PAYABLE – (Continued)

Maturities of installment notes payable are summarized as follows:

Year ending December 31,	
2024	$ 15,365,801
2025	9,067,927
2026	6,988,868
2027	2,064,253
2028	4,693,035
	$ 38,179,884

NOTE 8 - RELATED PARTY NOTE RECEIVABLES

As of December 31, 2023 and 2022, related party note receivables from Hydrozonix, LLC consisted of $1,009,579 and $977,579, respectively. The Company has not established set payment terms. Although the note bears interest at 5.00%, management has chosen not to recognize interest income until such time the interest is collected. The note is recorded net of amounts previously recognized as related party receivables. The note is set to expire December 31, 2024 and management expects to collect by the due date.

NOTE 9 - RELATED PARTY AND INTERCOMPANY TRANSACTIONS

During the years ended December 31, 2023 and 2022 the Company entered into various activities for certain related parties. Related party activities can be summarized as follows:

	2023	2022
Construction and lease revenues	$ 89,687,051	$ 80,584,508
Billings due on contracts	$ 4,654,237	$ 7,841,669
Subcontractor costs	$ 173,438	$ 421,930
Equipment and building rent	$ 38,994,018	$ 30,660,013
Management Fees	$ 20,743,504	$ 14,750,343

NOTE 10 - STATE INCOME TAXES

Deferred state income taxes on the consolidated balance sheets include deferred tax (assets) liabilities as follows:

	2023	2022
Deferred state income tax (assets) liabilities:		
Gross profit on contracts	$ (1,839,262)	$ (599,100)
State net operating loss carryforwards	(468,400)	(249,200)
Accrued incentives	916,862	468,500
Non-qualified deferred compensation plan	(240,360)	(153,832)
Cash basis conversion	(97,872)	(78,254)
Accelerated depreciation methods	1,283,832	1,164,586
Total deferred state income tax (assets) liabilities	$ (445,200)	$ 552,700

NOTE 11 - STOCKHOLDERS' INCOME TAXES

As explained in Note 1 above, the Company has elected to be taxed under Subchapter S of the Internal Revenue Code. As an "S Corporation", the Company passes through items of income and deductions to the stockholders each year as earned and pays no corporate federal income tax or state income taxes in states in which the Company is classified as a Subchapter S corporation. For the year ended December 31, 2023, it is anticipated that the Company will pass through approximately $138,007,000 of federal taxable income to the stockholders.

Although not accrued in the accompanying financial statements, deferred federal taxes would be based on the following temporary differences passed through to the stockholders at December 31, 2023 and 2022, respectively:

	2023	2022
Gross profit on contracts	$ (66,554,819)	$ (23,191,177)
Accrued incentives	33,219,631	18,017,401
Deferred state income taxes	445,200	(552,700)
Non-qualified deferred compensation plan	(1,933,725)	(1,227,881)
Deferred compensation	5,964,626	3,983,196
Cash basis conversion	3,123,146	2,876,553
State net operating loss carryforward	14,945,592	9,518,253
Differences in methods for depreciation	(22,145,004)	(20,106,181)
	$ (32,935,353)	$ (10,682,536)

NOTE 12 - EMPLOYEE BENEFIT PLANS

The Company has a 401(k) retirement and savings plan (the "Plan") covering substantially all employees. Employees may defer up to 90 percent of their compensation. The Company may make a matching contribution on behalf of each participant in an amount determined by the Company on an annual basis. The matching contribution is based on either a specific dollar amount or limited to an amount deferred as a percentage of compensation by the participant as determined by the Company. Employees vest in Company contributions over a period of five years. Contributions to the Plan for the year ended December 31, 2023 and 2022 were $2,556,647 and $2,486,469, respectively.

NOTE 12 - EMPLOYEE BENEFIT PLANS – (Continued)

The Company has a VEBA trust through which employee health insurance claims are funded. The Company makes periodic payments to the trust, comprised of both employee and employer funds, which amounted to $8,935,752 and $7,765,387 during 2023 and 2022, respectively. As of December 31, 2023 and 2022, assets held in the VEBA trust amounted to $1,007,750 and $689,342, respectively.

During 2018, the Company established a deferred compensation program, which permits key employees to defer a portion, not exceeding 50%, of their annual profit sharing compensation. The Company reserves the right to make discretionary credits to the accounts of active participants. Employees vest in Company credits 100% after three years of service following the credit. The Company has provided no discretionary employer credits. At December 31, 2023 and 2022, $9,981,144 and $7,376,681, respectively is included in "deferred compensation liability" relating to the plan. To assist in funding the deferred compensation liability, the Company has invested in corporate-owned life insurance policies, which are included in "investments and other assets," to ensure all future liabilities can be paid.

NOTE 13 - CONTINGENCIES AND LITIGATION

In the normal course of business, the Company is also subject to various claims and litigation arising out of other contract claims, disputes, and indemnification agreements. Litigation is subject to many uncertainties, the outcome of individual litigated matters is not predictable with assurance, and it is reasonably possible that some of the legal actions and claims could be filed and decided as unfavorable to the Company. Although the amount of ultimate liabilities with respect to such aforementioned matters cannot be ascertained, management, after providing for certain known claims, believes that any resulting liability should not materially affect the financial position of the Company.

During March 2013, the Company issued a guarantee for a loan on a multi dwelling unit residential development for which the stockholder is a major investor. As of December 31, 2023, the total guarantee was approximately $3,702,686. As of January 26, 2024, the balance of the loan was paid off. Although the loan is collateralized by real estate, an additional investor has also issued a similar joint and several guarantee should the development become unable to meet its obligations under the related debt instrument. The Company could potentially be liable for a portion or the entire obligation. There is an agreement between the guarantors that in the event of a default, if either guarantor cannot fund their required portion of the obligation, a collateralized loan between the funding guarantor and the non-funding guarantor will be created.

NOTE 14 - BUSINESS CONCENTRATIONS

Approximately 35% of the Company's cash receipts were made up of two customers as of December 31, 2023. Approximately 48% of the Company's cash receipts were made up of three customers as of December 31, 2022.

Approximately 28% of the Company's accounts receivable was made up of one customer as of December 31, 2023. Approximately 10% of the Company's accounts receivable was made up of one customer as of December 31, 2022.

Independent Auditors' Report

To the Board of Directors
Phillips Infrastructure Holdings, Inc.
Knoxville, Tennessee

Opinion

We have audited the accompanying consolidated financial statements of Phillips Infrastructure Holdings, Inc. and subsidiaries (collectively, the "Company"), which comprise the consolidated balance sheets as of December 31, 2022 and 2021, and the related consolidated statements of income, retained earnings, and cash flows for the years then ended, and the related notes to the consolidated financial statements.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2022 and 2021, and the results of their operations and their cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern within one year after the date that the consolidated financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with generally accepted auditing standards, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control related matters that we identified during the audit.

Report on Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the consolidated financial statements as a whole. The supplementary schedules on pages 22 and 23 are presented for the purpose of additional analysis of the consolidated financial statements rather than to present the financial position, results of operations, and cash flows of the individual companies, and are not a required part of the consolidated financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the consolidated financial statements. The information has been subjected to the auditing procedures applied in the audit of the consolidated financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the consolidated financial statements or to the consolidated financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the consolidated financial statements as a whole.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation - The consolidated financial statements of Phillips Infrastructure Holdings, Inc. include the wholly-owned subsidiaries of Phillips & Jordan, Inc., RowCon, LLC, and National Fleet Services, LLC (collectively, the "Company"). All significant intercompany transactions and balances have been eliminated.

Company Activities and Operating Cycle - Phillips Infrastructure Holdings, Inc. is principally in the business of providing management functions and oversight to the wholly owned subsidiaries described above, where these wholly owned businesses are principally in the business of construction, transportation, and equipment rental.

Phillips & Jordan, Inc. ("PNJ") is a contractor engaged principally in the business of heavy civil construction, right of way infrastructure construction, industrial site preparation, and disaster response throughout the United States of America.

RowCon, LLC ("ROW") is a nationwide specialty contractor performing right of way services for the power and pipeline markets. ROW specializes in matting supply installation and removal; access road and crane pad construction; vegetative debris clearing, grinding, and disposal; culvert and bridge installation; substation site grading and preparation; and other general projects.

National Fleet Services, LLC ("NFS") is a transportation and equipment rental company in the state of Delaware. NFS is principally in the business of providing transportation services and heavy equipment rental to the construction industry throughout the United States of America.

The lengths of the construction contracts vary, but are typically less than one year. As of December 31, 2022, the Company did have significant contracts that are long-term in nature. Accordingly, certain contract related assets and liabilities are classified as current while others are classified as noncurrent.

Revenue Recognition from Construction Contracts - The Company reports revenues from construction contracts in accordance with Accounting Standards Update ("ASU") 2014-09, "*Revenue from Contracts with Customers*," (ASC Topic 606"). Under this method, the Company follows the five-step model provided by ASC Topic 606 in order to recognize revenue in the following manner: 1) Identify the contract; 2) Identify the performance obligations of the contract; 3) Determine the transaction price of the contract; 4) Allocate the transaction price to the performance obligations; and 5) Recognize revenue as appropriate.

Revenues from contracts, including a portion of estimated profit, are recognized as good or services are provided, based on costs incurred and estimated total contract costs using the cost-to-cost measure of progress method. Under this method, revenue is recognized in relation to the ratio of costs incurred to total estimated costs. This method is used because management considers it the best available measure of progress.

Multiple promises to transfer individual goods or services may exist within a single contract; however, critical integration or interrelated commitment of such goods and services is typically necessary in order to deliver a completed project. As such, management typically considers the Company's contracts to have a single performance obligation.

Contract costs include direct material, equipment, labor, other direct costs, estimated warranty costs, and indirect costs related to contract performance, such as indirect labor, supplies, insurance, equipment repairs, and depreciation.

Changes in job performance, conditions, and estimated profitability, including those arising from contract penalty provisions and final contract settlements, may result in revisions to contract revenues. Certain contracts also include variable consideration provisions, which could also result in adjustments to transaction prices and contract revenues. Estimates for variable consideration are included in transaction pricing only when adjustments are probable, as circumstances evolve, or when uncertainties are resolved.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Revenue Recognition from Construction Contracts - (Continued) - Adjustments to transaction prices and contract revenues are recognized during the period when realization is assured, and the amount can be reasonably determined. Provisions for estimated losses on uncompleted contracts are made in the period in which the losses are measurable. Because of the inherent uncertainties in estimated costs, it is reasonably possible that the estimates used will change within the near term.

Revenue Recognition from Leasing - Revenues from leasing the Company's assets through providing transportation or renting heavy equipment are recorded at the time services are rendered. Leasing agreements include rates for hourly, daily, weekly, or monthly use. Revenues are generated in relation to the reported usage and any additional monthly costs incurred on the Company's assets and recognized on a monthly basis as earned, regardless of the timing of billing. Invoices are due within 30 days of issuance. All leasing revenue earned is from intercompany activity, and is eliminated on the consolidated financial statements.

Contracts Assets and Liabilities - Contract assets and liabilities are defined by ASC Topic 606 and generally exist in conjunction with contracts while they are in process. Contract assets and liabilities generally do not represent significant financing tools and include the following components:

- Costs and earnings in excess of billings ("Underbillings"). Underbillings (also referred to as work in process) are assets representing the estimated value of unbilled work for projects with performance obligations recognized over time.

- Billings in excess of revenue recognized ("Overbillings"). Overbillings are liabilities representing billings that the Company is entitled to invoice contract owners (and receive payment for) in advance of completing certain related contract work.

- Retainage due from contract owners. Generally, the Company does not consider retainage withheld from progress billings as unconditional rights to payment until certain contractual milestones or performance obligations are reached (typically substantial completion). Accordingly, retainage withheld is generally considered a component of contract assets or liabilities until final billed to the customer.

Certain contracts contain components representing both contract assets and contract liabilities. ASC Topic 606 requires aggregation of such assets and liabilities at the contract level, but not at the performance obligation level within individual contracts.

Cash and Cash Equivalents - For purposes of the Consolidated Statements of Cash Flows, the Company considers investments readily convertible into cash without significant loss due to penalties or interest and deposits in banks to be cash and cash equivalents.

Billings Due on Contracts - Billings due on contracts are based on contracted (or estimated) transaction prices and contracted payment terms and represent unconditional rights to consideration subject only to the passage of time and application approval. Delinquent receivables are written off based on individual credit evaluation and specific circumstances of the customer. The Company has contract terms ranging from 30 to 90 days, balances outstanding past these terms are considered past due; however the Company does not accrue late fees or interest income on past due amounts. Management has established an allowance for doubtful accounts based upon individual credit valuations and circumstances of specific customers. Once collection efforts have been exhausted, such balances will be charged to the allowance.

.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Insurance Claims - The Company has experienced extreme weather causing delays and rework related to one of the Company's contracts. The significance of the weather constituted the need to file an insurance claim held for this type of event. Management elected to track the effects of this claim separate from the job to ensure the tracking goes smoothly, as well as to track the actual costs for productive work on the project. As of December 31, 2022 and 2021 amounts recorded by management on these insurance claims were $4,494,982 and $4,000,000, respectively. During the year ended December 31, 2022 the claims outstanding at December 31, 2021 were collected. The outstanding claims at December 31, 2022 are the results of new claims awarded.

Inventory - Inventory is stated at the lower of cost or market and consists primarily of repair parts and computers to be used by the Company. Management has determined that no inventory obsolescence reserve is required as of December 31, 2022 and 2021.

Property and Equipment - Property and equipment are recorded at cost. The cost of property and equipment is depreciated using either straight-line or accelerated methods and includes salvage values based on historical values of equipment at disposition. Such methods are determined based upon the estimated useful lives and estimated timing of repair costs of the respective assets as follows:

Buildings and improvements	4-40 years
Construction equipment	2-7 years
Transportation equipment	3-15 years
Shop equipment	3-5 years
Aircraft	15 Years
Office furniture and equipment	1-7 years
Information systems	2-5 years

When assets are retired or otherwise disposed, the cost and related accumulated depreciation are removed from the account and any resulting gain or loss is recognized in operations for the period.

Income Taxes - The Company has elected to be taxed under Subchapter S of the Internal Revenue Code. Accordingly, items of income and deductions are passed through to the stockholders who are responsible for payment of any federal income taxes thereon.

The Company is not classified as a Subchapter S corporation in certain states; therefore, related state income taxes are incurred at the corporate level. State income taxes are reported in accordance with accounting principles generally accepted in the United States of America which require the establishment of deferred tax accounts for all temporary differences between book and tax basis apportioned to these states. In addition, deferred tax accounts must be adjusted to reflect new rates if enacted into law.

The principal accounting method used by the Company for tax reporting purposes is the cash receipts and disbursements method, which applies to short-term construction contracts (as defined by the Internal Revenue Code). The Company recognizes income from long-term construction contracts on the percentage-of-completion method and from residential construction contracts on the completed contract method.

Deferred taxes are recognized for differences between the basis of assets and liabilities for financial reporting and income tax purposes. The differences relate principally to differences in methods for the recognition of gross profit on contracts and from differences in methods for reporting depreciation. All deferred tax assets and liabilities are classified as non-current.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Income Taxes - (Continued) - The Company periodically evaluates any uncertain tax positions that might exist. Accordingly, a loss contingency is recognized when it is probable that a liability has been incurred as of the date of the financial statements and the amount of the loss can be reasonably estimated. The amount recognized is subject to estimates and management judgment with respect to the likely outcome of each uncertain tax position. The amount that is ultimately sustained for an individual uncertain tax position or for all uncertain tax positions in the aggregate could differ from the amount recognized. Although the tax years ending December 31, 2019 through December 31, 2022 remain open for examination by various taxing authorities, it is management's opinion that no significant uncertain tax positions exist at December 31, 2022.

Advertising - The costs of advertising, promotion and marketing programs are charged to operations in the year incurred. The Company recorded advertising expense of $473,015 and $274,405 as of December 31, 2022 and 2021, respectively.

Health Insurance Benefits - The Company employs a self-insurance strategy to provide health insurance benefits to its employees, for the first $125,000. The Company relies on CIGNA as a third party administrator, and currently maintains a reinsurance policy for claims in excess of $125,000 in a single policy year.

Commercial Insurance - The Company is a member of American Contractor Insurance Group, LTD (hereinafter referred to as "ACIG") which provides for losses related to workers' compensation, general liability, and auto claims. Beyond certain limits, the programs provide that members are jointly and severally liable for unpaid claims in all years that the Company is a member. Based upon the excess insurance coverage provided within ACIG for specific and aggregate losses and the financial condition of ACIG, and its members, management considers any contingent liabilities to be insignificant at December 31, 2022. As a member of ACIG, the Company retains a minority equity interest, which is accounted for using the cost method of accounting. Included in other assets is the initial equity investment of $75,000.

Use of Estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could vary from the estimates that were used.

Concentrations of Credit Risk - Financial instruments which potentially subject the Company to concentrations of credit risk are primarily cash and cash equivalents and accounts receivable. The Company's cash deposits are placed in highly rated financial institutions and are applied to balances outstanding on the line-of-credit on a daily basis.

Cash and cash equivalents are maintained at financial institutions and, at times, balances may exceed federally insured limits. The Company has never experienced any losses related to these balances. As of December 31, 2022 and 2021, amounts on deposit in excess of federally insured limits approximated $40,000,000 and $48,300,000, respectively.

The Company's customer base consists of customers located throughout the United States. The Company performs ongoing credit evaluations of its customers' financial condition, generally perfect lien rights as collateral from its customers, and maintains a reserve for potentially doubtful accounts. Although the Company is directly affected by the well-being of the construction industry, management does not believe significant credit risk exists at December 31, 2022.

Reclassifications - Certain reclassifications have been made to the 2021 balances in order to conform to the 2022 presentation with no effect on the previously reported net income or stockholders' equity.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Recently Adopted Accounting Pronouncements - Effective January 1, 2022, the Company adopted FASB ASC 842, *Leases*. The new standard establishes a right of use ("ROU") model that requires a lessee to record an ROU asset and a lease liability on the balance sheet for all leases with terms longer than 12 months. Leases are classified as either finance or operating, with classification affecting the pattern of expense recognition in the income statement. Leases with a term of less than 12 months will not record a right of use asset and lease liability and the payments will be recognized into profit or loss on a straight-line basis over the lease term.

The Company elected to adopt ASC 842 using the alternative transition method that allows the Company to initially apply the new lease standard at the adoption date and recognize a cumulative effect adjustment to the opening balance of retained earnings in the period of adoption. As a result, the Company reporting for the comparative period presented in the financial statements is in accordance with FASB ASC 840.

The Company elected to adopt the package of practical expedients available under the transition guidance with the new standard. This package includes the following: relief from determination of lease contracts included in existing or expiring leases at the point of adoption, relief from having to reevaluate the classification of leases in effect at the point of adoption, and relief from reevaluation of existing leases that have initial direct costs associated with the execution of the lease contract. The Company also elected to adopt the practical expedient to use hindsight to determine the lease term and assess the impairment of the right of use assets.

The adoption of FASB ASC 842 did not have a material impact on the Company's results of operations or cash flows

Date of Management's Review - Management has evaluated events and transactions occurring subsequent to the balance sheet date for items that should potentially be recognized or disclosed in these financial statements. The evaluation was conducted through the date of the independent auditors' report, which is the date these financial statements were available to be issued.

NOTE 2 - BILLINGS DUE ON CONTRACTS

Billings due on contracts represent amounts for performance obligations that have been billed but not yet collected, net of retainage. Billings due on contracts as of December 31, 2022 and 2021 consisted of:

	Outstanding Less Than 90 Days	Outstanding Greater Than 90 Days	2022	2021
Completed contracts	$ 1,789,715	$ 834,174	$ 2,623,889	$ 4,878,102
Uncompleted contracts	130,758,124	3,227,312	133,985,436	91,116,296
Allowance for doubtful accounts	-	(116,798)	(116,798)	(229,598)
Billings due on contracts, net	$ 132,547,839	$ 3,944,688	$ 136,492,527	$ 95,764,800

As of December 31, 2022, management is negotiating the value of various claims based on work previously performed. Management does not recognize revenue on outstanding claims or change orders in excess of cost until approved. Management does not anticipate that the outcome of the claims will negatively impact net income. Through the date of the independent auditors' report, $104,207,410 (76%), of billings due on contracts as of December 31, 2022 had been collected.

NOTE 2 - BILLINGS DUE ON CONTRACTS - (Continued)

Activity in the allowance for doubtful accounts for the periods indicated is as follows:

	2022	2021
Allowance for doubtful accounts at the beginning of the year	$ 229,598	$ 1,989,775
Provision for doubtful accounts	25,000	214,049
Amounts charged against the allowance	(137,800)	(1,974,226)
Allowance for doubtful accounts at the end of the year	$ 116,798	$ 229,598

NOTE 3 - UNCOMPLETED CONTRACTS

As explained in Note 1 above, the Company recognizes revenue from construction contracts on the cost-to-cost measure of progress method. Information concerning uncompleted contracts is as follows:

	2022	2021
Costs incurred	$ 821,068,309	$ 631,674,098
Estimated earnings thereon	172,470,191	87,898,029
Contract revenues	$ 993,538,500	$ 719,572,127
Billings to date (inclusive of retainage)	$ 1,041,559,784	$ 756,337,450
Components of contract assets and liabilities		
Underbillings	$ 12,465,764	$ 7,703,466
Overbillings	(60,487,048)	(44,468,789)
Retainage due from contract owners, completed contracts	6,766,714	819,437
Retainage due from contract owners, uncompleted contracts	37,089,966	25,230,912
Retainage due from related party, uncompleted contracts	8,428,139	2,365,991
Net contract assets (liabilities)	$ 4,263,535	$ (8,348,983)

Presented in the accompanying balance sheets as follows:

	2022	2021
Contract assets, current	$ 44,766,194	$ 28,167,033
Contract assets, noncurrent	19,984,389	7,952,771
Contract liabilities	(60,487,048)	(44,468,787)
Total contract assets (liabilities)	$ 4,263,535	$ (8,348,983)

NOTE 3 - UNCOMPLETED CONTRACTS - (Continued)

The following is a reconciliation of the Company's backlog, which represents signed contracts in existence at December 31, 2022.

Balance at December 31, 2021	$ 623,941,546
New contracts and adjustments	652,435,237
	1,276,376,783
Less contract revenues earned for the year ending December 31, 2022	(707,836,591)
Balance at December 31, 2022	568,540,192
New contracts obtained subsequent to December 31, 2022	75,875,000
Balance as of report issuance date	$ 644,415,192

NOTE 4 - PROPERTY AND EQUIPMENT

At December 31, 2022, property and equipment consisted of:

	Cost	Accumulated Depreciation/ Depletion	Net Book Value
Buildings and improvements	$ 2,732,115	$ 1,491,589	$ 1,240,526
Construction equipment	143,888,807	64,670,268	79,218,539
Transportation equipment	38,683,703	24,180,039	14,503,664
Shop equipment	939,596	934,205	5,391
Aircraft	11,950,000	2,151,000	9,799,000
Office furniture and equipment	3,394,823	3,078,643	316,180
Information systems	240,556	217,955	22,601
	201,829,600	96,723,699	105,105,901
Construction in process	1,500,000	-	1,500,000
	$ 203,329,600	$ 96,723,699	$ 106,605,901

NOTE 4 - PROPERTY AND EQUIPMENT - (Continued)

At December 31, 2021, property and equipment consisted of:

	Cost	Accumulated Depreciation/ Depletion	Net Book Value
Buildings and improvements	$ 2,732,115	$ 801,644	$ 1,930,471
Construction equipment	122,601,212	53,645,045	68,956,167
Transportation equipment	34,597,205	22,547,882	12,049,323
Shop equipment	939,596	933,369	6,227
Aircraft	11,950,000	1,434,000	10,516,000
Office furniture and equipment	3,144,926	2,408,196	736,730
Information systems	240,556	124,066	116,490
	176,205,610	81,894,202	94,311,408
Construction in process	55,188	-	55,188
	$ 176,260,798	$ 81,894,202	$ 94,366,596

The Company recorded $35,032,245 and $33,419,293 in total equipment acquisitions as of December 31, 2022 and 2021, respectively, included in investing activities and supplemental disclosure of noncash activity on the statement of cash flows.

NOTE 5 - CASH, CASH MANAGEMENT CLEARING, AND CREDIT FACILITY

At December 31, 2022 and 2021, outstanding checks of $195,794 and $1,625,708, respectively, had not been presented for payment by the bank and are reflected as “Cash management clearing” on the consolidated balance sheets.

Phillips & Jordan, Inc. maintains a $20,000,000 credit facility with a bank, which provides for the daily replacement of cash accounts for disbursement clearing requirements. The line of credit bears interest at the adjusted SOFR rate plus 0.10% + 1.25% (5.65% at December 31, 2022), expires December 15, 2023 and is secured by substantially all corporate assets with the exception of real estate. There were no outstanding balances on this line as of December 31, 2022 and 2021. There were no borrowings or repayments during 2022 or 2021.

During 2021, National Fleet Service, LLC entered into an equipment line of credit for $5,000,000 with a bank. The line of credit bears interest at the adjusted SOFR rate plus .10% + 1.75% (6.15% at December 31, 2021), and is secured by a selection of equipment. The outstanding balance on this line was $0 and $3,344,393 at December 31, 2022 and December 31, 2021, respectively. Borrowings and repayments for the year ending December 31, 2021 were $3,344,393 and $0, respectively. During 2022, National Fleet Services, LLC withdrew the remaining amount of the line of credit and converted it to a note payable.

NOTE 6 - LEASES

Lessor - As discussed in Note 1, National Fleet Services, LLC is in the business of providing rental of transportation and heavy equipment. These rentals are made through short term leasing arrangements of hourly, daily, weekly, or monthly use. The Company maintains assets, accounted for in Note 4, that are available to lease through operating leases. The total net book value of equipment available for lease of $81,572,426 is included in National Fleet Services' balance sheet. National Fleet Services' revenue on operating leases is in accordance with ASU 842.

Lessee - As discussed in Note 1, the Company records lease activity in accordance with ASC 842. The Company determines if its contractual agreements contain a lease at inception. A lease is identified when a contract allows for the right to control an identified asset for a period of time in exchange for consideration. The Company's lease agreements consist of operating leases for office buildings and heavy equipment. The Company does not have material financing leases.

The Company's operating leases are included on the balance sheets as right-of-use lease assets and lease liabilities. A right-of-use lease asset represents the right to use an underlying asset over the term of a lease, while a lease liability represents the obligation to make lease payments arising from the lease. Current and noncurrent lease liabilities are recognized on commencement date at the present value of lease payments. Right-of-use lease assets are also recognized on the commencement date as the total lease liability plus and/or minus prepaid rents, deposits, and lease incentives, if any. As the Company's leases typically do not provide an implicit rate, it uses its fully collateralized incremental borrowing rate based on the information available at commencement date in determining the present value of lease payments. The incremental borrowing rate is influenced by market interest rates, credit ratings, and lease term and as such, may differ for individual leases.

The Company's lease agreements typically do not contain variable lease payments, residual value guarantees, purchase options, or restrictive covenants. The Company's leases may include the option to renew for a period of months to several years. The term of the Company's leases may include the option to renew when it is reasonably certain that the option will be exercised. If a lease agreement contains lease components (e.g., payments for rent) and non-lease components (e.g., payments for excess usage), it is all accounted for as a single lease component.

Information regarding lease expense, remaining lease term, discount rate, and other select lease information is presented below as of and for the year ended December 31, 2022:

	Phillips Infrastructure Holdings, Inc.	Phillips and Jordan, Inc.	National Fleet Services, LLC	Total
Lease Costs				
Operating lease expense	$ 2,626,352	$ 305,338	$ 1,715,422	$ 4,647,112
Short term lease expense	-	93,812	-	93,812
Total lease expense	$ 2,626,352	$ 399,150	$ 1,715,422	$ 4,740,924
Other Lease Information				
Operating cash outflows from operating leases	$ 1,933,021	$ 298,202	$ 1,643,331	$ 3,874,554
Right-of-use lease assets obtained in exchange for new lease liabilities	$ 8,397,808	$ -	$ -	$ 8,397,808
Lease Term and Discount Rate				
Weighted average remaining lease term (in years)	17.83	2.23	1.22	
Weighted average discount rate	1.97%	1.90%	2.92%	

NOTE 6 - LEASES - (Continued)

A summary of the maturity of lease liabilities as of December 31, 2022 is as follows:

Year ended December 31,	Phillips Infrastructure Holdings, Inc.	Phillips and Jordan, Inc.	National Fleet Services, LLC	Total
2023	$ 2,365,006	$ 290,730	$ 1,884,432	$ 4,540,168
2024	2,437,935	149,218	452,093	3,039,246
2025	2,513,119	59,925	-	2,573,044
2026	2,590,631	45,858	-	2,636,489
2027	2,670,543	-	-	2,670,543
Thereafter	42,577,900	-	-	42,577,900
Total minimum lease payments	55,155,134	545,731	2,336,525	58,037,390
Less: amounts representing interest	(9,161,156)	(8,072)	(42,278)	(9,211,506)
Present value of lease liabilities	$ 45,993,978	$ 537,659	$ 2,294,247	$ 48,825,884

During 2022, RowCon, LLC entered into two office leases, with terms of 3 and 6 months, expiring on March 31, 2022 and September 30, 2022, respectively. RowCon, LLC recorded lease expense of $18,212 and $79,300 for the years ended December 31, 2022 and 2021, respectively.

During the year ended December 31, 2021, Phillips and Jordan, Inc. recorded rent expense related to office space and storage facilities and rent expense on job sites and construction equipment under lease agreements in accordance with ASC 840 of $2,255,878. These leases expired during 2021 and were not renewed.

NOTE 7 - INSTALLMENT NOTES PAYABLE

Installment notes payable at December 31, 2022 and 2021 consisted of:

	2022	2021
Note payable to a bank due in monthly payments of $1,198,425 of principal and interest ranging from 2.35% to 4.82%, secured by equipment, with maturities through August 2027.	$ 33,640,296	$ 32,949,458
Notes payable to an equipment financing company due in monthly aggregate payments of $248,296 of principal and interest ranging from 2.25% to 2.99%, secured by equipment, with maturities through November 2026.	9,624,918	10,813,950
Note payable to a bank due in monthly payments of $117,775 of principal and interest at 3.28%, secured by an aircraft, matures November 2024.	7,318,039	8,470,947
Note payable to an equipment financing company due in monthly aggregate payments of $48,204 of principal and interest at 4.25%, secured by equipment, matures March 2024.	702,973	1,239,116
Note payable to an equipment financing company due in monthly aggregate payments of $52,108 of principal and interest at 0.00%, secured by equipment, with maturities through November 2026.	1,825,712	1,183,090
	53,111,938	54,656,561
Less installments due within one year	17,425,350	14,272,166
	$ 35,686,588	$ 40,384,395

Maturities of installment notes payable are summarized as follows:

Year ending December 31,	
2023	$ 17,425,350
2024	20,382,979
2025	7,991,310
2026	5,958,857
2027	1,353,442
	$ 53,111,938

NOTE 8 - RELATED PARTY NOTE RECEIVABLES

As of December 31, 2022 and 2021, related party note receivables from Hydrozonix, LLC consisted of $977,579 and $887,579, respectively. The Company has not established set payment terms. Although the note bears interest at 5.00%, management has chosen not to recognize interest income until such time the interest is collected. The note is recorded net of amounts previously recognized as related party receivables. The note is set to expire December 31, 2023 and management expects to collect by the due date.

NOTE 9 - RELATED PARTY AND INTERCOMPANY TRANSACTIONS

During the years ended December 31, 2022 and 2021 the Company entered into various activities for certain related parties. Related party activities can be summarized as follows:

	2022	2021
Construction and lease revenues	$ 80,584,508	$ 47,556,156
Billings due on contracts	$ 7,841,669	$ 2,220,917
Subcontractor costs	$ 421,930	$ 615,821
Equipment and building rent	$ 30,660,013	$ 21,811,650
Management Fees	$ 14,750,343	$ 9,050,000

NOTE 10 - STATE INCOME TAXES

Deferred state income taxes on the consolidated balance sheets include deferred tax liabilities as follows:

	2022	2021
Deferred state income tax liabilities:		
Gross profit on contracts	$ (599,100)	$ (431,000)
State net operating loss carryforwards	(249,200)	(305,500)
Accrued incentives	468,500	385,200
Non-qualified deferred compensation plan	(153,832)	(114,929)
Cash basis conversion	(78,254)	(100,750)
Accelerated depreciation methods	1,164,586	1,341,179
Total deferred state income tax liabilities	$ 552,700	$ 774,200

NOTE 11 - STOCKHOLDERS' INCOME TAXES

As explained in Note 1 above, the Company has elected to be taxed under Subchapter S of the Internal Revenue Code. As an "S Corporation", the Company passes through items of income and deductions to the stockholders each year as earned and pays no corporate federal income tax or state income taxes in states in which the Company is classified as a Subchapter S corporation. For the year ended December 31, 2022, it is anticipated that the Company will pass through approximately $47,106,000 of federal taxable income to the stockholders.

NOTE 11 - STOCKHOLDERS' INCOME TAXES - (Continued)

Although not accrued in the accompanying financial statements, deferred federal taxes would be based on the following temporary differences passed through to the stockholders at December 31, 2022 and 2021, respectively:

	2022	2021
Gross profit on contracts	$ (23,191,177)	$ (14,935,909)
Accrued incentives	18,017,401	13,318,110
Deferred state income taxes	(552,700)	(771,200)
Non-qualified deferred compensation plan	(1,227,881)	(684,251)
Deferred compensation	3,983,196	2,266,519

NOTE 12 - EMPLOYEE BENEFIT PLANS

The Company has a 401(k) retirement and savings plan (the "Plan") covering substantially all employees. Employees may defer up to 90 percent of their compensation. The Company may make a matching contribution on behalf of each participant in an amount determined by the Company on an annual basis. The matching contribution is based on either a specific dollar amount or limited to an amount deferred as a percentage of compensation by the participant as determined by the Company. Employees vest in Company contributions over a period of five years. Contributions to the Plan for the year ended December 31, 2022 and 2021 were $2,486,469 and $1,964,929, respectively.

The Company has a VEBA trust through which employee health insurance claims are funded. The Company makes periodic payments to the trust, comprised of both employee and employer funds, which amounted to $7,765,387 and $7,496,656 during 2022 and 2021, respectively. As of December 31, 2022 and 2021, assets held in the VEBA trust amounted to $689,342 and $842,657, respectively.

During 2018, the Company established a deferred compensation program, which permits key employees to defer a portion, not exceeding 50%, of their annual profit sharing compensation. The Company reserves the right to make discretionary credits to the accounts of active participants. Employees vest in Company credits 100% after three years of service following the credit. The Company has provided no discretionary employer credits. At December 31, 2022 and 2021, $7,376,681 and $8,004,154, respectively is included in "deferred compensation liability" relating to the plan. To assist in funding the deferred compensation liability, the Company has invested in corporate-owned life insurance policies, which are included in "investments and other assets," to ensure all future liabilities can be paid.

NOTE 13 - CONTINGENCIES AND LITIGATION

In the normal course of business, the Company is also subject to various claims and litigation arising out of other contract claims, disputes, and indemnification agreements. Litigation is subject to many uncertainties, the outcome of individual litigated matters is not predictable with assurance, and it is reasonably possible that some of the legal actions and claims could be filed and decided as unfavorable to the Company. Although the amount of ultimate liabilities with respect to such aforementioned matters cannot be ascertained, management, after providing for certain known claims, believes that any resulting liability should not materially affect the financial position of the Company.

NOTE 13 - CONTINGENCIES AND LITIGATION - (Continued)

During March 2013, the Company issued a guarantee for a loan on a multi dwelling unit residential development for which the stockholder is a major investor. As of December 31, 2022, the total guarantee was approximately $5,628,000 As of March 17, 2023, approximately $5,605,000 was drawn on the loan. Although the loan is collateralized by real estate, an additional investor has also issued a similar joint and several guarantee should the development become unable to meet its obligations under the related debt instrument. The Company could potentially be liable for a portion or the entire obligation. There is an agreement between the guarantors that in the event of a default, if either guarantor cannot fund their required portion of the obligation, a collateralized loan between the funding guarantor and the non-funding guarantor will be created.

NOTE 14 - BUSINESS CONCENTRATIONS

Approximately 48% of the Company's cash receipts were made up of three customers as of December 31, 2022. Approximately 44% of the Company's cash receipts were made up of three customers as of December 31, 2021.

Approximately 10% of the Company's accounts receivable was made up of one customer as of December 31, 2022. Approximately 18% of the Company's accounts receivable was made up of one customer as of December 31, 2021.

NOTE 15 - RECENT ACCOUNTING PRONOUNCEMENTS

In June 2016, the Financial Accounting Standards Board (FASB) issued ASU No. 2016-13, *Financial Instruments - Credit Losses (Topic 326) Measurement of Credit Losses on Financial Instruments* ("ASU 2016-13"), which requires an entity to utilize a new impairment model known as the current expected credit loss (CECL) model to estimate its lifetime "expected credit loss" and record an allowance that, when deducted from the amortized cost basis of the financial assets and certain other instruments, including but not limited to trade receivables. Credit losses relating to trade receivables will be recorded through an allowance for credit losses rather than as a direct write-down to the receivable. ASU 2016-13 requires a cumulative effect adjustment to the balance sheet as of the beginning of the first reporting period in which the guidance is effective. In November 2019, the FASB issued ASU 2019-10, *Financial Instruments - Credit Losses (Topic 326): Effective Dates*, which defers the effective date of ASU 2016-13 to fiscal years beginning after December 15, 2022. ASU 2016-13 will be effective for the Company beginning January 1, 2023. The Company is currently evaluating the impact of the adoption of ASU 2016-13 on its financial statements.

RODEFER MOSS & CO, PLLC

Independent Auditors' Report

To the Board of Directors
Phillips Infrastructure Holdings, Inc.
Knoxville, Tennessee

Opinion

We have audited the accompanying consolidated financial statements of Phillips Infrastructure Holdings, Inc. and subsidiaries (collectively, the "Company"), which comprise the balance sheets as of December 31, 2021 and 2020, and the related statements of operations, retained earnings, and cash flows for the years then ended, and the related notes to the consolidated financial statements.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2021 and 2020, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern within one year after the date that the financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with generally accepted auditing standards, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control related matters that we identified during the audit.

Report on Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the consolidated financial statements as a whole. The supplementary schedules on pages 20 and 21 are presented for the purpose of additional analysis of the consolidated financial statements rather than to present the financial position, results of operations, and cash flows of the individual companies, and are not a required part of the consolidated financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the consolidated financial statements. The information has been subjected to the auditing procedures applied in the audit of the consolidated financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the consolidated financial statements or to the consolidated financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the consolidated financial statements as a whole.

See notes to consolidated financial statements.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation - The consolidated financial statements of Phillips Infrastructure Holdings, Inc. include the wholly-owned subsidiaries of Phillips & Jordan, Inc., ROWCON, LLC, and National Fleet Services, LLC (collectively, the "Company"). All significant intercompany transactions and balances have been eliminated.

Company Activities and Operating Cycle - Phillips Infrastructure Holdings, Inc. is principally in the business of providing management functions and oversight to the wholly owned subsidiaries described above, where these wholly owned businesses are principally in the business of construction, transportation, and equipment rental.

Phillips & Jordan, Inc. ("PNJ") is a contractor engaged principally in the business of heavy civil construction, right of way infrastructure construction, industrial site preparation, and disaster response throughout the United States of America.

ROWCON, LLC ("ROW") is a nationwide specialty contractor performing right of way services for the power and pipeline markets. ROW specializes in matting supply installation and removal; access road and crane pad construction; vegetative debris clearing, grinding, and disposal; culvert and bridge installation; substation site grading and preparation; and other general projects.

National Fleet Services, LLC ("NFS") is a transportation and equipment rental company in the state of Delaware. NFS is principally in the business of providing transportation services and heavy equipment rental to the construction industry throughout the United States of America.

The lengths of the construction contracts vary, but are typically less than one year. As of December 31, 2021, the Company did have significant contracts that are long-term in nature. Accordingly, certain contract related assets and liabilities are classified as current while others are classified as noncurrent.

Revenue Recognition from Construction Contracts - The Company reports revenues from construction contracts in accordance with Accounting Standards Update ("ASU") 2014-09, "*Revenue from Contracts with Customers*," (ASC Topic 606"). Under this method, the Company follows the five-step model provided by ASC Topic 606 in order to recognize revenue in the following manner: 1) Identify the contract; 2) Identify the performance obligations of the contract; 3) Determine the transaction price of the contract; 4) Allocate the transaction price to the performance obligations; and 5) Recognize revenue as appropriate.

Revenues from contracts, including a portion of estimated profit, are recognized as good or services are provided, based on costs incurred and estimated total contract costs using the cost-to-cost measure of progress method. Under this method, revenue is recognized in relation to the ratio of costs incurred to total estimated costs. This method is used because management considers it the best available measure of progress.

Multiple promises to transfer individual goods or services may exist within a single contract; however, critical integration or interrelated commitment of such goods and services is typically necessary in order to deliver a completed project. As such, management typically considers the Company's contracts to have a single performance obligation.

Contract costs include direct material, equipment, labor, other direct costs, estimated warranty costs, and indirect costs related to contract performance, such as indirect labor, supplies, insurance, equipment repairs, and depreciation.

Changes in job performance, conditions, and estimated profitability, including those arising from contract penalty provisions and final contract settlements, may result in revisions to contract revenues. Certain contracts also include variable consideration provisions, which could also result in adjustments to transaction prices and contract revenues. Estimates for variable consideration are included in transaction pricing only when adjustments are probable, as circumstances evolve, or when uncertainties are resolved.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Revenue Recognition from Construction Contracts - (Continued) - Adjustments to transaction prices and contract revenues are recognized during the period when realization is assured, and the amount can be reasonably determined. Provisions for estimated losses on uncompleted contracts are made in the period in which the losses are measurable. Because of the inherent uncertainties in estimated costs, it is reasonably possible that the estimates used will change within the near term.

Revenue Recognition from Leasing - Revenues from leasing the Company's assets through providing transportation or renting heavy equipment are recorded at the time services are rendered. Leasing agreements include rates for hourly, daily, weekly, or monthly use. Revenues are generated in relation to the reported usage and any additional monthly costs incurred on the Company's assets and recognized on a monthly basis as earned, regardless of the timing of billing. Invoices are due within 30 days of issuance. All leasing revenue earned is from intercompany activity, and is eliminated on the consolidated financial statements.

Contracts Assets and Liabilities - Contract assets and liabilities are defined by ASC Topic 606 and generally exist in conjunction with contracts while they are in process. Contract assets and liabilities generally do not represent significant financing tools and include the following components:

- Costs and earnings in excess of billings ("Underbillings"). Underbillings (also referred to as work in process) are assets representing the estimated value of unbilled work for projects with performance obligations recognized over time.

- Billings in excess of revenue recognized ("Overbillings"). Overbillings are liabilities representing billings that the Company is entitled to invoice contract owners (and receive payment for) in advance of completing certain related contract work.

- Retainage due from contract owners. Generally, the Company does not consider retainage withheld from progress billings as unconditional rights to payment until certain contractual milestones or performance obligations are reached (typically substantial completion). Accordingly, retainage withheld is generally considered a component of contract assets or liabilities until final billed to the customer.

Certain contracts contain components representing both contract assets and contract liabilities. ASC Topic 606 requires aggregation of such assets and liabilities at the contract level, but not at the performance obligation level within individual contracts.

Cash and Cash Equivalents - For purposes of the Consolidated Statements of Cash Flows, the Company considers investments readily convertible into cash without significant loss due to penalties or interest and deposits in banks to be cash and cash equivalents.

Billings Due on Contracts - Billings due on contracts are based on contracted (or estimated) transaction prices and contracted payment terms and represent unconditional rights to consideration subject only to the passage of time and application approval. Delinquent receivables are written off based on individual credit evaluation and specific circumstances of the customer. The Company has contract terms ranging from 30 to 90 days, balances outstanding past these terms are considered past due; however the Company does not accrue late fees or interest income on past due amounts. Management has established an allowance for doubtful accounts based upon individual credit valuations and circumstances of specific customers. Once collection efforts have been exhausted, such balances will be charged to the allowance.

.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Insurance Claims - During 2021 and 2020, the Company experienced extreme weather causing delays and rework related to one of the Company's open contracts. The significance of the weather constituted the need to file an insurance claim held for this type of event. Management elected to track the effects of this claim separate from the job to ensure the tracking goes smoothly, as well as to track the actual costs for productive work on the project. As of December 31, 2021 and 2020 amounts due on the insurance claims were $4,000,000 and $4,186,917, respectively

Inventory - Inventory is stated at the lower of cost or market and consists primarily of crushed stone and repair parts for sale or to be used by the Company. Management has determined that no inventory obsolescence reserve is required as of December 31, 2021 and 2020.

Property and Equipment - Property and equipment are recorded at cost. The cost of property and equipment is depreciated using either straight-line or accelerated methods and includes salvage values based on historical values of equipment at disposition. Such methods are determined based upon the estimated useful lives and estimated timing of repair costs of the respective assets as follows:

Buildings and improvements	4-40 years
Aircraft	15 Years
Transportation equipment	3-15 years
Shop equipment	3-5 years
Construction equipment	2-7 years
Information systems	2-5 years
Office furniture and equipment	1-7 years

When assets are retired or otherwise disposed, the cost and related accumulated depreciation are removed from the account and any resulting gain or loss is recognized in operations for the period.

Income Taxes - The Company has elected to be taxed under Subchapter S of the Internal Revenue Code. Accordingly, items of income and deductions are passed through to the stockholders who are responsible for payment of any federal income taxes thereon.

The Company is not classified as a Subchapter S corporation in certain states; therefore, related state income taxes are incurred at the corporate level. State income taxes are reported in accordance with accounting principles generally accepted in the United States of America which require the establishment of deferred tax accounts for all temporary differences between book and tax basis apportioned to these states. In addition, deferred tax accounts must be adjusted to reflect new rates if enacted into law.

The principal accounting method used by the Company for tax reporting purposes is the cash receipts and disbursements method, which applies to short-term construction contracts (as defined by the Internal Revenue Code). The Company recognizes income from long-term construction contracts on the percentage-of-completion method and from residential construction contracts on the completed contract method.

Deferred taxes are recognized for differences between the basis of assets and liabilities for financial reporting and income tax purposes. The differences relate principally to differences in methods for the recognition of gross profit on contracts and from differences in methods for reporting depreciation. All deferred tax assets and liabilities are classified as non-current.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Income Taxes - (continued) - The Company periodically evaluates any uncertain tax positions that might exist. Accordingly, a loss contingency is recognized when it is probable that a liability has been incurred as of the date of the financial statements and the amount of the loss can be reasonably estimated. The amount recognized is subject to estimates and management judgment with respect to the likely outcome of each uncertain tax position. The amount that is ultimately sustained for an individual uncertain tax position or for all uncertain tax positions in the aggregate could differ from the amount recognized. Although the tax years ending December 31, 2018 through December 31, 2021 remain open for examination by various taxing authorities, it is management's opinion that no significant uncertain tax positions exist at December 31, 2021.

Advertising - The costs of advertising, promotion and marketing programs are charged to operations in the year incurred. The Company recorded advertising expense of $126,358 and $57,453 as of December 31, 2021 and 2020, respectively.

Health Insurance Benefits - The Company employs a self-insurance strategy to provide health insurance benefits to its employees, for the first $125,000. The Company relies on CIGNA as a third party administrator, and currently maintains a reinsurance policy for claims in excess of $125,000 in a single policy year.

Commercial Insurance - The Company is a member of American Contractor Insurance Group, LTD (hereinafter referred to as "ACIG") which provides for losses related to workers' compensation, general liability, and auto claims. Beyond certain limits, the programs provide that members are jointly and severally liable for unpaid claims in all years that the Company is a member. Based upon the excess insurance coverage provided within ACIG for specific and aggregate losses and the financial condition of ACIG, and its members, management considers any contingent liabilities to be insignificant at December 31, 2021. As a member of ACIG, the Company retains a minority equity interest, which is accounted for using the cost method of accounting. Included in other assets is the initial equity investment of $75,000.

Use of Estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could vary from the estimates that were used.

Concentrations of Credit Risk - Financial instruments which potentially subject the Company to concentrations of credit risk are primarily cash and cash equivalents and accounts receivable. The Company's cash deposits are placed in highly rated financial institutions and are applied to balances outstanding on the line-of-credit on a daily basis.

Cash and cash equivalents are maintained at financial institutions and, at times, balances may exceed federally insured limits. The Company has never experienced any losses related to these balances. As of December 31, 2021 and 2020, amounts on deposit in excess of federally insured limits approximated $48,300,000 and $20,000,000, respectively.

The Company's customer base consists of customers located throughout the United States. The Company performs ongoing credit evaluations of its customers' financial condition, generally perfect lien rights as collateral from its customers, and maintains a reserve for potentially doubtful accounts. Although the Company is directly affected by the well-being of the construction industry, management does not believe significant credit risk exists at December 31, 2021.

Reclassifications - Certain reclassifications have been made to the 2020 balances in order to conform to the 2021 presentation with no effect on the previously reported net income or stockholders' equity.

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES - (Continued)

Date of Management's Review - Management has evaluated events and transactions occurring subsequent to the balance sheet date for items that should potentially be recognized or disclosed in these financial statements. The evaluation was conducted through the date of the independent auditors' report, which is the date these financial statements were available to be issued.

NOTE 2 - BILLINGS DUE ON CONTRACTS

Billings due on contracts represent amounts for performance obligations that have been billed but not yet collected, net of retainage. Billings due on contracts as of December 31, 2021 and 2020 consisted of:

	Outstanding Less Than 90 Days	Outstanding Greater Than 90 Days	2021	2020
Completed contracts	$ 3,264,931	$ 1,613,171	$ 4,878,102	$ 5,656,975
Uncompleted contracts	90,738,445	377,851	91,116,296	67,633,501
Allowance for doubtful accounts	-	(229,598)	(229,598)	(1,989,775)
Billings due on contracts, net	$ 94,003,376	$ 1,761,424	$ 95,764,800	$ 71,300,701

As of December 31, 2021, management is negotiating the value of various claims based on work previously performed. Management generally does not recognize revenue on outstanding claims or change orders in excess of cost until approved. Management does not anticipate that the outcome of the claims will negatively impact net income. Through the date of the independent auditors' report, collection of $88,961,925 (93%), of billings due on contracts as of December 31, 2021 had been collected

Activity in the allowance for doubtful accounts for the periods indicated is as follows:

	2021	2020
Allowance for doubtful accounts at the beginning of the year	$ 1,989,775	$ 2,302,564
Provision for doubtful accounts	214,049	-
Amounts charged against the allowance	(1,974,226)	(312,789)
Allowance for doubtful accounts at the end of the year	$ 229,598	$ 1,989,775

NOTE 3 - UNCOMPLETED CONTRACTS

As explained in Note 1 above, the Company recognizes revenue from construction contracts on the cost-to-cost measure of progress method. Information concerning uncompleted contracts is as follows:

	2021	2020
Costs incurred	$ 631,674,098	$ 446,122,318
Estimated earnings thereon	87,898,029	42,063,406
Contract revenues	$ 719,572,127	$ 488,185,724
Billings to date (inclusive of retainage)	$ 756,337,450	$ 507,249,324
Components of contract assets and liabilities		
Underbillings	$ 7,703,466	$ 8,455,833
Overbillings	(44,468,789)	(27,519,433)
Retainage due from contract owners, completed contracts	819,437	3,005,045
Retainage due from contract owners, uncompleted contracts	25,230,912	-
Retainage due from related party, uncompleted contracts	2,365,991	20,136,732
Net contract (liabilities) assets	$ (8,348,983)	$ 4,078,177

Presented in the accompanying balance sheets as follows:

	2021	2020
Contract assets, current	$ 28,167,033	$ 30,053,567
Contract assets, noncurrent	7,952,771	1,544,043
Contract liabilities	(44,468,787)	(27,519,433)
Total contract (liabilities) assets	$ (8,348,983)	$ 4,078,177

The following is a reconciliation of the Company's backlog, which represents signed contracts in existence at December 31, 2021.

Balance at December 31, 2020	$ 442,104,294
New contracts and adjustments	633,691,496
	1,075,795,790
Less contract revenues earned for the year ending December 31, 2021	(451,854,243)
Balance at December 31, 2021	623,941,547
New contracts obtained subsequent to December 31, 2021	314,775,135
Balance as of report issuance date	$ 938,716,682

NOTE 4 - PROPERTY AND EQUIPMENT

At December 31, 2021, property and equipment consisted of:

	Cost	Accumulated Depreciation/ Depletion	Net Book Value
Buildings and improvements	$ 2,732,115	$ 801,644	$ 1,930,471
Construction equipment	122,601,212	53,645,045	68,956,167
Transportation equipment	34,597,205	22,547,882	12,049,323
Shop equipment	939,596	933,369	6,227
Aircraft	11,950,000	1,434,000	10,516,000
Office furniture and equipment	3,144,926	2,408,196	736,730
Information systems	240,556	124,066	116,490
	176,205,610	81,894,202	94,311,408
Construction in process	55,188	-	55,188
	$ 176,260,798	$ 81,894,202	$ 94,366,596

At December 31, 2020, property and equipment consisted of:

	Cost	Accumulated Depreciation/ Depletion	Net Book Value
Land	$ 4,511,490	$ -	$ 4,511,490
Buildings and improvements	9,266,819	5,268,003	3,998,816
Construction equipment	108,018,302	53,267,941	54,750,361
Transportation equipment	33,082,238	21,280,731	11,801,507
Shop equipment	939,596	923,331	16,265
Aircraft	19,550,000	1,515,000	18,035,000
Office furniture and equipment	3,650,940	2,147,246	1,503,694
Information systems	59,751	27,134	32,617
	179,079,136	84,429,386	94,649,750
Construction in process	20,598,017	-	20,598,017
	$ 199,677,153	$ 84,429,386	$ 115,247,767

The Company recorded $33,419,293 and $49,915,476 in total acquisitions as of December 31, 2021 and 2020, respectively, included in investing activities and supplemental disclosure of noncash activity on the statement of cash flows.

NOTE 5 - CASH, CASH MANAGEMENT CLEARING, AND CREDIT FACILITY

At December 31, 2021 and 2020, outstanding checks of $1,625,708 and $4,464,534, respectively, had not been presented for payment by the bank and are reflected as "Cash management clearing" on the consolidated balance sheets.

Phillips & Jordan, Inc. maintains a $20,000,000 credit facility with a bank, which provides for the daily replacement of cash accounts for disbursement clearing requirements. The line of credit bears interest at the adjusted SOFR rate plus 0.10% + 1.25% (1.40% at December 31, 2021), expires December 15, 2022 and is secured by substantially all corporate assets with the exception of real estate. There were no outstanding balances on this line as of December 31, 2021 and 2020. There were no borrowings or repayments during 2021 or 2020.

During 2021, ROWCON, LLC entered into an operating line of credit agreement for $3,000,000 with a bank. The line of credit bears interest at the adjusted SOFR rate plus .10% + 1.75% (1.90% at December 31, 2021), expires December 1, 2022 and is secured by personal property. The outstanding balance on this line was $0 at December 31, 2021. There were no borrowings or repayments during the year ending December 31, 2021.

During 2020, National Fleet Services, LLC entered into an equipment line of credit for $8,000,000 with a bank. The line of credit bears interest at the adjusted LIBOR rate plus 1.75%, expired on April 30, 2021 and is secured by a selection of equipment. The outstanding balance on this line was $5,609,932 at December 31, 2020. Borrowings and repayments for the year ending December 31, 2020 were $5,609,932 and $0, respectively. During 2021, National Fleet Services, LLC withdrew the remaining amount of the line of credit and converted it to a note payable.

During 2021, National Fleet Service, LLC entered into an equipment line of credit for $5,000,000 with a bank. The line of credit bears interest at the adjusted SOFR rate plus .10% + 1.75% (1.90% at December 31, 2021), expires November 30, 2022 and is secured by a selection of equipment. The outstanding balance on this line was $3,344,393 at December 31, 2021. Borrowings and repayments for the year ending December 31, 2021 were $3,344,393 and $0, respectively

NOTE 6 - LEASE COMMITMENTS

During the normal course of business, the Company enters into various operating leases, both on job sites and for office space, storage facilities, and construction equipment. The Company recorded rent expense related to office space and storage facilities for the years ended December 31, 2021 and 2020 amounting to $2,335,078 and $1,599,284, respectively. The Company recorded rent expense on job sites and for construction equipment for the years ended December 31, 2021 and 2020 amounting to $911,247 and $2,062,825, respectively.

Future minimum lease commitments for office space and storage facilities are summarized as follows:

Year ending December 31,	
2022	$ 2,251,527
2023	2,029,339
2024	1,926,616
2025	1,926,499
2026	1,986,274
Thereafter	8,019,176
	$ 18,139,431

Future minimum lease commitments on job sites and for construction equipment are summarized as follows:

Year ending December 31,	
2022	$ 31,900

NOTE 7 - INSTALLMENT NOTES PAYABLE

Installment notes payable at December 31, 2021 and 2020 consisted of:

	2021	2020
Note payable to a bank due in monthly payments of $285,644 of principal and interest at 3.52%, secured by equipment, matures October 2024.	$ 9,230,456	$ 17,409,219
Note payable to a bank due in monthly payments of $117,775 of principal and interest at 3.28%, secured by an aircraft, matures December 2024.	8,470,947	9,586,736
Notes payable to various banks due in monthly aggregate payments of $337,231 of principal and interest rates of 2.88% to 3.88%. Secured by equipment, with maturities through March 2023.	-	7,955,037
Notes payable to an equipment financing company due in monthly aggregate payments of $207,055 of principal and interest at 2.25%, secured by equipment, with maturities through November 2026.	10,813,950	-
Note payable to a bank due in monthly aggregate payments of $407,497 of principal and interest ranging from 2.35% to 2.75%, secured by equipment, with maturities through November 2025.	14,406,066	9,178,884
Note payable to a bank due in monthly aggregate payments of $148,043 of principal and interest ranging from 2.65% to 2.85%, secured by equipment, with maturities through November 2026.	8,157,717	-
Note payable to a bank due in monthly payments of $140,917 of principal and interest at 4.82%, secured by equipment, matures September 2023.	1,155,219	4,347,071
Note payable to an equipment financing company due in monthly aggregate payments of $48,204 of principal and interest at 4.25%, secured by equipment, with maturities through March 2024.	1,239,116	2,608,134
Note payable to an equipment financing company due in monthly aggregate payments of $29,993 of principal and interest at 0.00%, secured by equipment, with maturities through May 2025.	1,183,090	1,126,501
	54,656,561	52,211,582
Less installments due within one year	14,272,166	13,600,871
	$ 40,384,395	$ 38,610,711

NOTE 7 - INSTALLMENT NOTES PAYABLE - (Continued)

Maturities of installment notes payable are summarized as follows:

Year ending December 31,	
2022	$ 14,272,166
2023	14,514,645
2024	17,274,668
2025	5,318,834
2026	3,276,248
	$ 54,656,561

Certain notes payable and a line of credit are governed by a loan agreement that includes covenants which require maintenance of a minimum tangible net worth of $75,000,000, a total liabilities (excluding lines of credit) to tangible net worth ratio not to exceed 1.5 to 1 (measured quarterly) and a debt service coverage ratio of 1.2 to 1 (measured quarterly). Per managements calculations the Company is in compliance with these covenants at December 31, 2021.

NOTE 8 - RELATED PARTY NOTE RECEIVABLES

As of December 31, 2021 and 2020, related party note receivables from Hydrozonix, LLC consisted of $887,579 and $887,579, respectively. The Company has not established set payment terms, however the amounts are due on demand. Although the note bears interest at 5.00%, management has chosen not to recognize interest income until such time the interest is collected. The note is recorded net of amounts previously recognized as related party receivables. The note is set to expire December 31, 2022.

NOTE 9 - RELATED PARTY AND INTERCOMPANY TRANSACTIONS

During the years ended December 31, 2021 and 2020 the Company entered into various activities for certain related parties. Related party activities can be summarized as follows:

	2021	2020
Construction and lease revenues	$ 47,556,156	$ 19,265,597
Subcontractor costs	$ 615,821	$ 793,171
Equipment and building rent	$ 21,811,650	$ 19,236,684
Management Fees	$ 9,050,000	$ 7,200,000
Acquisition of Equipment	$ -	$ 1,394,893

NOTE 10 - STATE INCOME TAXES

Deferred state income taxes on the consolidated balance sheets include deferred tax liabilities as follows:

	2021	2020
Deferred state income tax liabilities:		
Gross profit on contracts	$ (431,000)	$ 37,400
State net operating loss carryforwards	(305,500)	(244,079)
Accrued incentives	385,200	67,300
Non-qualified deferred compensation plan	(114,929)	(60,954)
Cash basis conversion	(100,750)	(43,250)
Accelerated depreciation methods	1,341,179	1,158,783
Total deferred state income tax liabilities	$ 774,200	$ 915,200

NOTE 11 - STOCKHOLDERS' INCOME TAXES

As explained in Note 1 above, the Company has elected to be taxed under Subchapter S of the Internal Revenue Code. As an "S Corporation", the Company passes through items of income and deductions to the stockholders each year as earned and pays no corporate federal income tax or state income taxes in states in which the Company is classified as a Subchapter S corporation. For the year ended December 31, 2021, it is anticipated that the Company will pass through approximately $17,190,000 of federal taxable income to the stockholders.

Although not accrued in the accompanying financial statements, deferred federal taxes would be based on the following temporary differences passed through to the stockholders at December 31, 2021 and 2020, respectively:

	2021	2020
Gross profit on contracts	$ (14,935,909)	$ 1,307,131
Accrued incentives	13,318,110	2,577,198
Deferred state income taxes	(771,200)	(794,600)
Non-qualified deferred compensation plan	(684,251)	(662,816)
Deferred compensation	2,266,519	142,372
Cash basis conversion	2,386,048	(3,772,260)
State net operating loss carryforward	7,222,042	6,532,290
Differences in methods for depreciation	(11,449,257)	(7,176,696)
	$ (2,647,898)	$ (1,847,381)

NOTE 12 - EMPLOYEE BENEFIT PLANS

The Company has a 401(k) retirement and savings plan (the "Plan") covering substantially all employees. Employees may defer up to 90 percent of their compensation. The Company may make a matching contribution on behalf of each participant in an amount determined by the Company on an annual basis. The matching contribution is based on either a specific dollar amount or limited to an amount deferred as a percentage of compensation by the participant as determined by the Company. Employees vest in Company contributions over a period of five years. Contributions to the Plan for the year ended December 31, 2021 and 2020 were $1,964,929 and $1,938,444, respectively.

The Company has a VEBA trust through which employee health insurance claims are funded. The Company makes periodic payments to the trust, comprised of both employee and employer funds, which amounted to $7,496,656 and $7,261,555 during 2021 and 2020, respectively. As of December 31, 2021 and 2020, assets held in the VEBA trust amounted to $842,657 and $542,153, respectively.

NOTE 12 - EMPLOYEE BENEFIT PLANS - (Continued)

During 2018, the Company established a deferred compensation program, which permits key employees to defer a portion, not exceeding 50%, of their annual profit sharing compensation. The Company reserves the right to make discretionary credits to the accounts of active participants. Employees vest in Company credits 100% after three years of service following the credit. The Company has provided no discretionary employer credits. At December 31, 2021 and 2020, $8,004,154 and $6,436,198, respectively is included in "deferred compensation liability" relating to the plan. To assist in funding the deferred compensation liability, the Company has invested in corporate-owned life insurance policies, which are included in "investments and other assets," to ensure all future liabilities can be paid.

NOTE 13 - CONTINGENCIES AND LITIGATION

In the normal course of business, the Company is also subject to various claims and litigation arising out of other contract claims, disputes, and indemnification agreements. Litigation is subject to many uncertainties, the outcome of individual litigated matters is not predictable with assurance, and it is reasonably possible that some of the legal actions and claims could be filed and decided as unfavorable to the Company. Although the amount of ultimate liabilities with respect to such aforementioned matters cannot be ascertained, management, after providing for certain know claims, believes that any resulting liability should not materially affect the financial position of the Company.

During March 2013, the Company issued a guarantee for a loan on a multi dwelling unit residential development for which the stockholder is a major investor. As of December 31, 2021, the total guarantee was approximately $10,363,000 As of April 1, 2022, approximately $8,216,000 was drawn on the loan. Although the loan is collateralized by real estate, an additional investor has also issued a similar joint and several guarantee should the development become unable to meet its obligations under the related debt instrument. The Company could potentially be liable for a portion or the entire obligation. There is an agreement between the guarantors that in the event of a default, if either guarantor cannot fund their required portion of the obligation, a collateralized loan between the funding guarantor and the non-funding guarantor will be created.

On March 11, 2020, the World Health Organization designated COVID-19 a world health pandemic. Our existing contingency and disaster preparedness plans give management the tools necessary to guide the company through such circumstances. We have evaluated the short-term and long-term impacts of this pandemic on the Company, the outcome of which is not predictable with assurance, and it is possible that the Company could be affected negatively by these circumstances. Although the ultimate financial impact of this pandemic cannot be ascertained, through a thorough evaluation of contracts in place, our customer base, and our overhead projections, management believes that any resulting financial impact should not materially affect the financial position of the Company as of December 31, 2021.

NOTE 14 - BUSINESS CONCENTRATIONS

Approximately 44% of the Company's cash receipts were made up of three customers as of December 31, 2021. Approximately 27% of the Company's cash receipts were made up of two customers as of December 31, 2020.

NOTE 15 - RECENT ACCOUNTING PRONOUNCEMENTS

In February 2016, the FASB issued ASU 2016-02, Leases (Subtopic 842) ("ASU 2016-02"). ASU 2016-02 provides revised guidance for lease accounting and related disclosure requirements, including a requirement for lessees to recognize lease assets and lease liabilities for certain operating leases. All leases with lease terms greater than one year are subject to ASU 2016-02, including leases in place as of the adoption date. Under the previous guidance, lessees were not required to recognize assets and liabilities for operating leases on the balance sheet. ASU 2016-02 is effective for fiscal years, and for interim periods within those fiscal years, beginning after December 15, 2021, with early adoption permitted. The Company is currently evaluating the potential effect of this ASU on its consolidated financial statements, including the potential amount of incremental lease assets and liabilities that are expected to be recognized upon adoption.

NOTE 16 - SUBSEQUENT EVENTS

In March 2022, management of Phillips & Jordan, Inc. formed a resolution to declare and pay a divided to Phillips Infrastructure Holding, Inc. in the amount of $30,000,000. Phillips Infrastructure then made a contribution to National Fleet Services, LLC of the same amount of which the majority of the proceeds were used to pay off a related party payable due to Phillips & Jordan. As a result of this resolution, all amounts owed to related parties have been recognized as current.

6.3 Litigation

PJE does not have any past or current bankruptcies, lawsuits, liens, or judgments that may affect financial integrity or stability.

6.4 Concurrent Project Load, Current and Anticipated Workload

PJE is currently finishing up debris removal projects resulting from Hurricanes Helene and Milton in several municipalities throughout the State of Georgia and is also completing waterway debris removal work for Tennessee Emergency Management Agency (TEMA) in several Counties in the State of Tennessee. As previously noted, an anticipated workload for the upcoming storm season is unknown due to the unpredictability of disaster work.

We can assure the City that PJE is fully capable of handling simultaneous commitments without overextending our resources. Additional information on our proven track records of successful simultaneous contract activations is demonstrated in Section 3.10 of this proposal.

7 PROJECT COST

Please find PJE's completed Exhibit A – Price Proposal on the following pages.

PRICE PROPOSAL FORM

The Price Proposal Form for RFP # 25-05-PW is attached as EXHIBIT "A".

All Proposers **must fill out the Price Proposal Form** (EXHIBIT "A") and submit the completed and signed form with the Proposal.

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

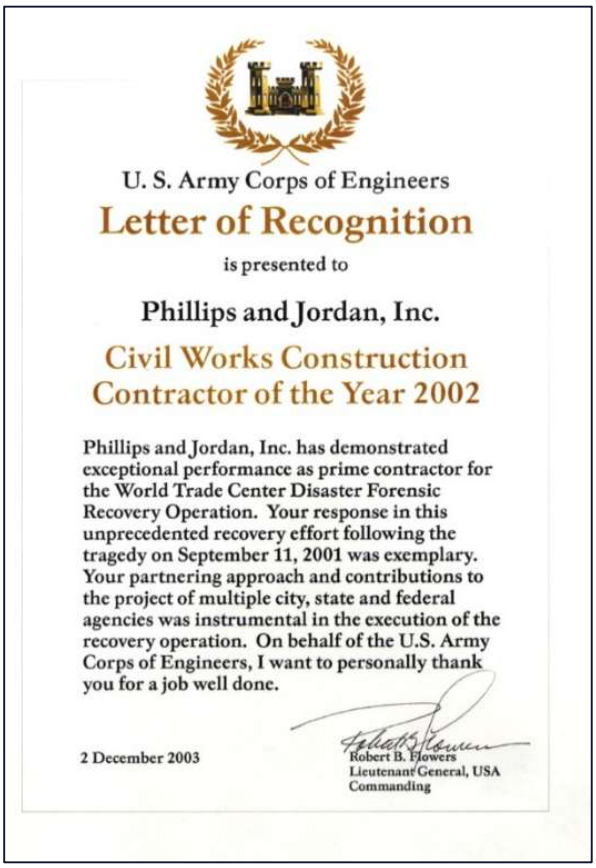
9 ADDITIONAL INFORMATION

9.1 Awards and Recognition

Due to our superior execution of the challenging debris management missions following Hurricane Andrew in 1992 and Hurricane Fran in 1996 for the U.S. Army Corps of Engineers (USACE), Phillips & Jordan (P&J) was the first Advanced Contracting Initiative (ACI) contractor to be activated by the USACE to perform debris management and other support for recovery operations following the terrorist attacks at the World Trade Center (WTC) in 2001. P&J was subsequently activated to support three additional disaster events (Hurricane Ivan, Hurricane Katrina, and State of Alabama Tornado Super-Outbreak) – the most ACI activations of any disaster debris management contractor in the United States.



U. S. Army Corps of Engineers

Letter of Recognition

is presented to

Phillips and Jordan, Inc.

Civil Works Construction Contractor of the Year 2002

Phillips and Jordan, Inc. has demonstrated exceptional performance as prime contractor for the World Trade Center Disaster Forensic Recovery Operation. Your response in this unprecedented recovery effort following the tragedy on September 11, 2001 was exemplary. Your partnering approach and contributions to the project of multiple city, state and federal agencies was instrumental in the execution of the recovery operation. On behalf of the U.S. Army Corps of Engineers, I want to personally thank you for a job well done.

2 December 2003

Robert B. Flowers
Lieutenant General, USA
Commanding

In recognition of our outstanding support provided during the WTC recovery mission; which involved the most complex debris stream the nation had ever seen and required coordination of activities being conducted by FEMA, USACE, the Federal Bureau of Investigation (FBI), the New York Police Department (NYPD), the New York City Office of Emergency Management, 11 other government agencies, and 4 subcontractors; P&J received awards from the FBI and the NYPD, earned an Outstanding Performance Evaluation from the USACE, and was named the "Civil Works Contractor of the Year" (2002) by USACE for the exceptional performance and true partnering spirit with which we undertook this tasking – ***the only disaster response contractor to ever receive this honor.***

U.S. Army Corps of Engineers
Louisiana Recovery Field Office
New Orleans, Louisiana

Certificate of Appreciation

Presented To

Phillips and Jordan, Inc.

For contributions to the safety program during Hurricanes Katrina and Rita recovery operations in south Louisiana by executing the hazardous debris mission for 4,329,000 man-hours without a lost-time accident from September 18, 2005 to January 9, 2006. Your efforts reflect great credit on your commitment to safety and the quality of your management and workforce.

Charles O. Smithers III
Colonel, EN
Commanding

May 9, 2007
Date

Michael F. Park
Director
Louisiana Recovery Field Office

Additionally, as a credit to P&J's commitment to safety and to the quality of our workforce, the USACE Louisiana Recovery Field office in New Orleans awarded P&J a safety Certificate of Appreciation following our Hurricane Katrina debris management mission for safely executing 4,329,000 man-hours without a lost-time accident from September 18, 2005, to January 9, 2006.

PHILLIPS & JORDAN
ENVIRONMENTAL

WRITTEN CONSENT OF SOLE MEMBER

July 10, 2023

The undersigned, being the sole Member (the "Member") of Phillips & Jordan Environmental Services, LLC, a Delaware limited liability company (the "Company"), acting by written consent without a meeting in accordance with the provisions of the Delaware Limited Liability Company Act, does hereby take the following action without a meeting and hereby directs that an executed copy of this document shall be filed with the official minutes of the proceedings of the Company:

Appointment of Officers

Pursuant to Section 5 of the Limited Liability Company Agreement of the Company, the undersigned Member of the Company hereby appoints the following individuals to serve as officers of the Company in the positions set forth beside their names below to hold office until his or her successor shall have been duly elected and shall have qualified, or until the death or resignation of any such officer, or until any such officer shall be been removed in the manner provided in the Limited Liability Company Agreement of the Company:

William T. Phillips, Jr.	Chief Executive Officer
J. Patrick McMullen	President
Bryan McIsaac	Chief Financial Officer and Treasurer
James F. Rose	Secretary

The Officers listed above are the only officers of the Company as of the date hereof, any others previously serving having been hereby removed or no longer serving due to death or resignation.

The Officers listed above are each authorized by the Company to sign, execute and deliver construction proposals, construction contracts and other contracts related to the business of the Company, and any and all documents related thereto, on behalf of the Company. Further, the Officers listed above, or any one of them acting alone, are authorized to be a signer on any bank or investment account of the Company.

IN WITNESS WHEREOF, the undersigned sole member of the Company has duly executed this Written Consent as of the date first written above.

PHILLIPS INFRASTRUCTURE HOLDINGS, INC.,
a Delaware corporation

Avis A. Phillips, Chairperson

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, Phillips & Jordan Environmental Services, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

Signature of Contractor's Authorized Official

Date

Bryan McIsaac, Chief Financial Officer

Name and Title of Contractor's Authorized Official

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).
This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. 25-05-PW

   for Disaster Debris Management.

2. This sworn statement is submitted by Phillips & Jordan Environmental Services, LLC
   [name of entity submitting sworn statement]

   whose business address is 10142 Parkside Dr. Ste 500 Knoxville, TN 37922
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 82-3396481

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is Bryan McIsaac and my relationship to
   [please print name of individual signing]

   the entity named above is Chief Financial Officer.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

_Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

____There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

__The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

RE: THREE-YEAR PRE-POSITIONED CONTRACT FOR DISASTER DEBRIS MANAGEMENT SERVICES

Destin City Hall
4200 Indian Bayou Trail, Destin, Florida, 32541
Attention: City Clerk

Dear Sir or Madam:

Southern Disaster Recovery (SDR) is pleased to submit the enclosed proposal for the RFP - Positioned Contract for Disaster Debris Management Services for the City of Destin, Florida, which sets forth our ability to perform the services requested. We have included detailed information regarding SDR's organizational structure, qualifications, resources, and experience we bring to our clients. We strive for excellence and integrity in our business practices and recognize the seriousness of compliance with all laws, specifically FEMA regulations. It is our pledge to provide the City of Destin, Florida with the utmost in ethical and professional disaster debris management services.

Since its inception, SDR has delivered superior debris recovery and removal services for the entities to which we have been contracted. When a disaster strikes, communities want the assurance that the contractor they have chosen to aid in recovering their community will provide efficient and comprehensive services. SDR has the experience and reputation to accomplish the contract requirements to the satisfaction of all parties involved.

SDR has significant available resources to manage disaster debris operations for all entities to whom we are contracted. SDR personnel have over 300 years combined experience in disaster recovery and debris management. With our management staff and safety officers, assets of over $20 million, and annual sales exceeding $40 million, we are large enough to manage multiple contracts simultaneously, without sacrificing the hands-on attention required by every entity's unique situation. In the past ten years, SDR has safety and successfully completed over 150 disaster debris contracts managing and disposing of over 11 million cubic yards of debris, valued over $250 million.

SDR is a corporate member of the Florida Emergency Preparedness Association as well as the Disaster Recovery Contractors Association (a Washington, DC based trade organization). Chip Patterson, our project principle, has been an officer in the Florida association (FEPA) as well as having direct responsibility for administering FEMA public assistance programs in a neighboring county. Mr. Patterson was Florida's emergency manager of the year for 2005 in part due to disaster response and recovery leadership that year. Al McClaran, SDR's CEO, is a Board member of the Disaster Recovery Contractors Association and has provided key leadership on important FEMA recovery policy issues.

If awarded this contract, SDR will work closely with the City officials, Emergency Management, and Public Works to complete the project efficiently. Our commitment extends into the community with our intention to utilize the maximum amount of local resources to fulfil our contractual responsibilities. Once the Notice to Proceed is received, SDR will begin promptly with the debris recovery and removal process.

This proposal is in all respects fair and in good faith without collusion or fraud.

Al McClaran, the signer of this proposal, has the authority to bind Southern Disaster Recovery, LLC in all representations of this proposal.

SDR intends to be bound by the terms of this proposal and the prices provided herein. We look forward to the opportunity to be your supplier of Disaster Debris Management Services.

Sincerely,

Al McClaran, CEO
Southern Disaster Recovery, LLC

TAB 3 - EXPERIENCE AND ABILITY

COMPANY BACKGROUND OVERVIEW

Southern Disaster Recovery (SDR) is a rapid-response contractor serving public and private clients. We are there for you in difficult times. Our service delivery includes:

- ☑ Disaster Debris Removal
- ☑ FEMA Public Assistance Expertise
- ☑ Environmental Response
- ☑ Hazardous Tree Mitigation,
- ☑ Utility Right of Way Services

Southern Disaster Recovery's (SDR) specializes in environmental disaster preparedness, response, and recovery. We are experts in disaster recovery project management and the Federal reimbursement programs that fund them. Our City, County and State customers are served out of our Greenville, SC Corporate office as well as regional offices in Orlando, Florida; Fairmount, Georgia; further strengthening our ability as a rapid-response contractor. SDR brings together the professionalism and combined strength of its associated companies to produce a disaster recovery division that meets the pressing needs of communities recovering from natural or man-made disasters.

SDR's significant range and breadth of technical and operational resources are applied to your disaster response and recovery. In the past twelve years, SDR has safely and successfully completed over 150 disaster debris contracts managing and disposing of over 11 million cubic yards of debris, valued over $250 million. SDR is large enough to successfully fulfill our contract obligations to the satisfaction of all parties.

SDR 's professional staff consists of:

- **Professional Engineers**
- **ISA Certified Arborists**
- **Former Local Government Public Works Directors**
- **Former State and Local Government Emergency Management Directors**
- **Certified Emergency Managers**
- **Licensed Landfill Operators**
- **Certified Public Accountant**

Corporate Information

- **Formed in 2012 as an LLC, SDR has been in disaster debris business for 12 years**
  FEIN: *45-5312400*

  Ocean Isle Beach, NC 28469
- **Office in GA**
  2448 US Highway 411 Fairmount, GA 30139
- **Office in Orlando, FL**
  390 North Orange Avenue Suite 2300,
  Orlando, FL, US 32801
- **Formed to provide excellent service in disaster recovery programs**
- **Have successfully completed over 150 Federally funded or Federally reimbursed projects for State and Local Government.**
- **SDR has 18 contract and full-time employees. Disaster project staffing is consistent with the size of the job; ranging from 20+ people to over 200 people working as subcontractors.**

We excel at mobilizing and getting to work quickly, following an aggressive project management plan that safely supported rapid disaster debris removal. Our project managers, superintendents and foremen are experienced in disaster debris removal in strict adherence to FEMA Public Assistance requirements.

Our technically diverse management team is uniquely equipped to address the complexity of issues in post disaster recovery work. In addition to SDR's expertise in disaster recovery; our management and supervision team has experience in leadership positions in Public Works, Solid Waste, Emergency Management, Public Safety and Disaster Recovery program monitoring.

SDR principals and leadership team have over 300 years collective experience in disaster recovery programs and program management dating to Hurricane Hugo in 1989. With the comprehensive abilities and experience of our principals, project managers, liaisons, and safety officer, assets of over $12 million, and annual sales exceeding $40 million, we are large enough to manage multiple contracts simultaneously, without sacrificing the hands-on attention required by every community's unique situation.

SDR has the broad experience needed to manage disaster recovery operations – program planning, project management, safety, quality control and un-paralleled success in project execution. Our staff are knowledgeable in all aspects of FEMA documentation and reimbursement criteria, thus ensuring that you receive all federal disaster funding to which they are entitled. SDR is committed to excellent business practices and pledges to conduct our endeavors safely, professionally, and ethically.

SDR is committed to excellence in our service delivery. We pledge to conduct business in a consistently safe, professional, and ethical manner.

Company's Technical and Construction Capabilities

Contract management, Accounting, Administrative Practices

Southern Disaster Recovery, LLC

- ✓ Headquartered in the South Carolina Upstate in Greenville since 2012.
- ✓ Centrally located between Charlotte, North Carolina and Atlanta, Georgia.
- ✓ Near 3 international airports
- ✓ Satellite locations in Fairmount, GA, Orlando, FL, Ocean Isle Beach, NC and Virginia Beach, VA

Our strategic location enables us to respond quickly to the needs of our clients.

We specialize in environmental disaster preparedness, response, and recovery, and we have the resources, skills, and expertise to assist local, state, and federal entities. Southern Disaster Recovery, LLC's (SDR) management and support staff have the knowledge to assist entities with:

- ✓ Developing a Debris Management Plan
- ✓ Training appropriate entity staff in all aspects of debris disaster recovery
- ✓ Managing comprehensive debris recovery operations:

Response | Demolition | Collection | Reduction | Final disposal

SDR is skilled in all aspects of FEMA documentation criteria, which is paramount for entities to receive accurate and complete reimbursement. We ensure entities receive all federal disaster funding to which they are entitled. We have retired local EM Directors on staff who are deeply experienced in FEMA's PA program and a full-time CPA with a committed administrative staff to ensure compliance with all industry standards of superior debris operations. Rest assured, SDR is able to successfully fulfill our contract obligations to the satisfaction of all parties.

As a premier Disaster Debris Recovery and Removal Contractor, SDR is committed to:

- ✓ Excellent business practices
- ✓ Professional, ethical, and safe operations
- ✓ Strict adherence to all FEMA requirements for procurement, debris tracking & invoicing

Accurate records are paramount for entities to receive the maximum amount of funds available to facilitate a full economic recovery. To that end, SDR is reliant upon the records provided by the entity's monitoring company during any recovery project. We carefully review and verify all documentation provided since this information becomes the basis for our invoicing. If an entity chooses to self-monitor, we have an automated debris management system that can be used by the applicant for accurate tracking of billable items in debris operations.

SDR has refined our debris management processes to become a leading regional debris recovery and removal contractor. There are several factors that make SDR a noteworthy provider of debris recovery and removal services:

- ❖ Our principals and management have collective experience of over 300 years in disaster recovery and debris management.
- ❖ The comprehensive abilities and experience of our project managers and safety officers.
- ❖ Assets of over $20 million.
- ❖ Annual sales exceeding $40 million.

SDR has safely and successfully completed over 150 disaster debris contracts managing and disposing of over 11 million cubic yards of debris, valued over $300 million.

Since our beginning in 2012, SDR has experienced rapid, sustainable growth. Following a catastrophic 2014 ice storm in South Carolina, **SDR processed over 2,000,000 CY of debris valued at over $48 million**. Of that amount, we were the Prime Contractor for nearly 75 percent of the work. Hurricane Matthew provided opportunities for SDR to manage 19 separate contracts throughout North Carolina, Georgia, and South Carolina with a **combined debris total of over 1,000,000 CY**.

Following Hurricanes Irma and Florence in 2018-2019, SDR handled **nearly 1,845,000 CY of debris.** Simultaneously, we also successfully undertook a beach debris removal and berm restoration project in Florida valued at over $7.5 million and completed debris clearing as a result of the catastrophic California wildfires that has continued ongoing.

Hurricane Dorian made landfall in North Carolina and produced devastating storm surge in 2019, SDR operated 7 TDMS locations and reduced debris by grinding, air curtain incineration, and compaction for the total $7.5 million value and 316,890 CY.

In 2020, a Derecho hit much of central and eastern Iowa with straight line winds over 100 mph, SDR was selected by **the City of Marion, IA for their debris collection & disposal efforts and Waterway Debris Remova**l. SDR has collected 730,000 cubic yards of debris and 289,188 cubic yards of waterway debris for this FEMA Public Assistance (PA) funded project, the total value is at $24,368,800.

After Georgia Tornados in 2021, SDR responded rapidly to support City of Newnan's disaster response and recovery efforts. From 3/29/2021 to 8/6/2021, SDR processed over 388,000 CYD of debris valued at $5,481,300.00.

Following 2021 Winter Storm Uri in KY, SDR operated Debris Removal for the 4 Counties in KY, SDR reduced debris for the total 641,800 CYD, 540 tons and the total value at $ 18,574,100.00.

2023 – GA Tornado, After Georgia Tornados in 2023, SDR responded to support Butts Co., City of Griffin and Spalding County's Debris Removal Services. From 1/18/2023 to 9/21/2023, SDR processed 303,877 CYD of debris valued at $5,026,758.00 in the City of Griffin. From 1/19/2023 to 8/1/2023, SDR processed 487,913 CYD of debris valued at $6,588,294.00 in Spalding County. From 1/21/2023 to 4/15/2023, SDR processed 127,737 CYD of debris valued at $3,002,290.00 in Butts Co.

2024-2025 Hurricane Helene Project Description for Simultaneous Contracts Within Four States and 35 Independent Political Jurisdictions, SDR successfully executed large-scale debris management across four states and Collected 9,400,000 cubic yards of debris within 35 jurisdictions. The project encompassed ROW debris collection, waterway debris removal, and private property debris removal. Utilized cutting-edge technology and specialized equipment to ensure efficiency and compliance with FEMA guidelines. Prioritized safety, financial integrity, and operational excellence throughout the project. Delivered results with unwavering commitment to subcontractor support and environmental stewardship

All our projects have been completed safely and prior to established deadlines.

FEMA REIMBURSEMENT PROCESSES

Southern Disaster Recovery (SDR) is highly experienced and qualified to assist the City of Destin with all aspects of FEMA reimbursement and documentation as it relates to disaster debris removal. We have the expertise to perform the tasks of the project to meet the needs of the entity and maximize funds reimbursement. Our operations are based on the Public Assistance Program as stipulated in The Stafford Act and clarified in 44 CFR, FEMA's Public Assistance Program and Policy Guide (PAPPG) and archived debris removal technical documents (FEMA's 325 Guide, the 9500 series) and various other FEMA publications on the subject of disaster debris management.

We have found that the best way to maximize your Federal reimbursement is to conduct and document our work that is fully in adherence with our contract, FEMA's Public Assistance program, national safety standards and state/federal environmental standards. As you will see in the following table; our company is aligned with this statement from top to bottom. Additionally, you will notice the expertise noted in this table is tremendous in addressing those issues that are a matter of interpretation by FEMA field reps and administrators; helping ensure your full eligible reimbursement!

To date, all SDR's clients have received their full eligible reimbursement from the FEMA Public Assistance program.

SDR EMPLOYEE	ROLE WITHIN COMPANY	SPECIFIC EXPERIENCE WITH FEMA PUBLIC ASSISTANCE REIMBURSEMENT AND OTHER GRANT PROGRAMS
Johnny Deloach	FEMA Liaison	• Retired FEMA employee, deputy for debris in FEMA Region IV • Consultant to states/counties • Consultant to US Army Corps of Engineers • Expertise in: Preliminary Damage Assessments (PDA's), preparation and review of Project Worksheets (PW's), securing Immediate Needs Funding and Expedited Funding

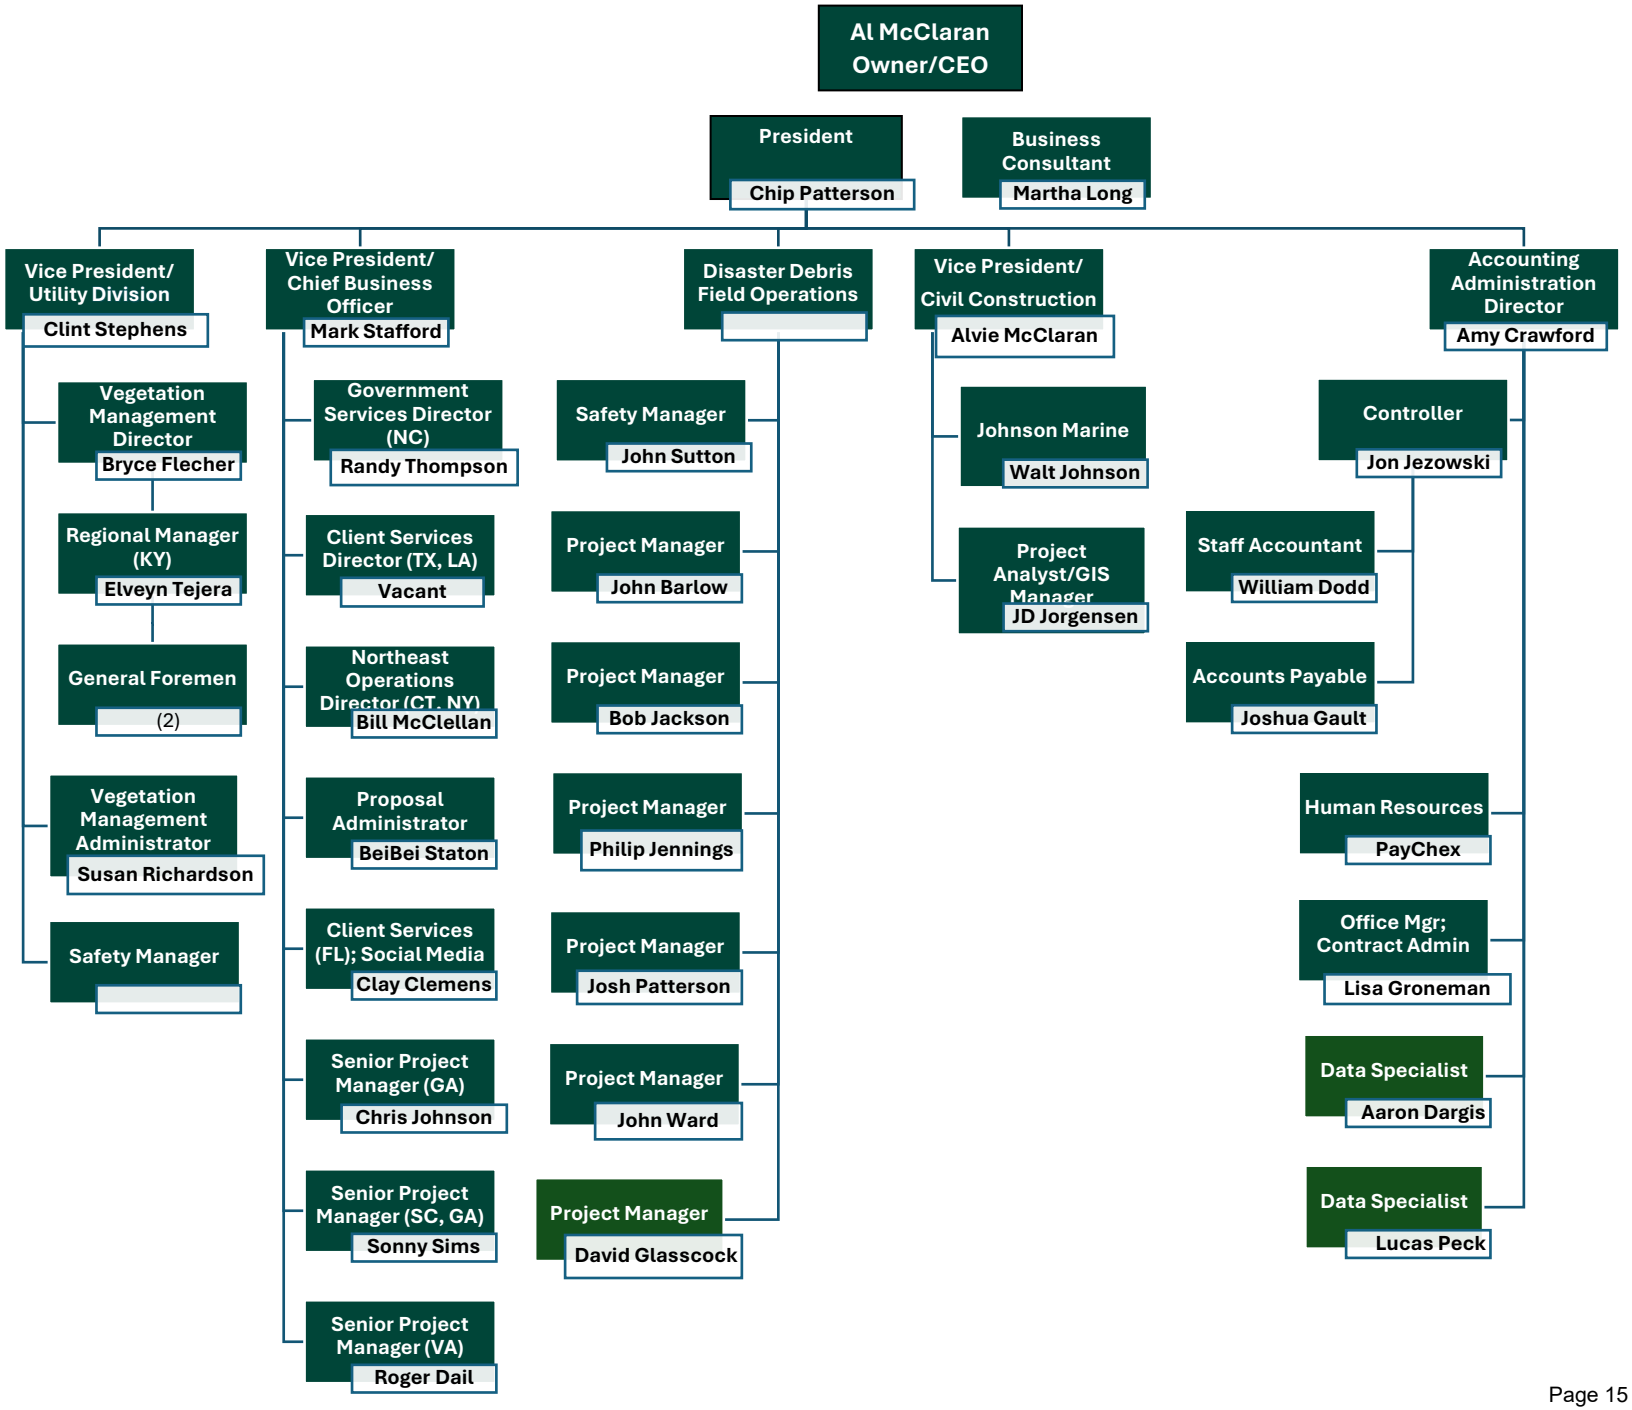
SDR CORPORATE ORGANIZATION STRUCTURE – 2025



KEY PERSONNEL FOR CITY OF DESTIN, FL

Al McClaran – Chief Executive Officer
Mr. McClaran is responsible for the day-to-day operations of Southern Disaster Recovery (SDR). He is knowledgeable in all aspects of FEMA criteria for debris recovery operations and has completed numerous courses with FEMA's Emergency Management Institute Independent Study Program. He works closely with Emergency Management and other government agencies both before and after disaster events. Prior to an event, he helps with readiness planning and preparation, including developing debris management plans and training government personnel in debris recovery operations. After disaster strikes, Mr. McClaran coordinates all aspects of the recovery and the documentation process to assure that the applicant receives the funding to which they are entitled. He has overseen debris removal projects following hurricanes, tornados, floods, wildfires, and winter storm disasters.

Chip Patterson – President
Robert "Chip" Patterson has over 30 years of experience in disaster management. Chip's career includes service as Chief of Operations in State Emergency Operations Centers in two states North Carolina and Florida; organizing and leading disaster resources to support some of the largest natural disasters in the nation during the 90's. Chip also served as a local government appointed official for over 10 years where he was responsible for leading disaster operations and administering a number of grant programs including FEMA's Public Assistance Grant Program. His work in leading the nation's first local government to be accredited in emergency management and leading Incident Management Teams to support disaster operations in Hurricane Katrina and Hurricane Wilma. He has been leading disaster debris removal operations for the past 15 years and is responsible for SDR's disaster response and recovery operations.

John Ward - Quality Assurance Director
John Ward is ensuring that the SDR provides exceptional service to all communities we serve. He is experienced in public administration, operations management, and strategic planning and implementation. He is capable of analyzing processes to identify and address opportunities for improvement, assessing problems, and executing feasible solutions. Furthermore, he excels in hiring, training, and developing teams to ensure the attainment of goals and objectives.

John Sutton - Site Safety Health Officer
Experienced professional offering more than 25 years in health and safety management, with strengths in a broad range of areas. He has accomplished manager with a reputation for maintaining the highest safety standards, and keen ability to conduct root cause analysis, establish safety rules and codes of practice and monitor and implement environmental, health and safety programs and practices. Consistently achieves safety goals by establishing, maintaining and managing effective business relationships at all levels of the organization. Skillful in protecting workers, assets and the community in the most cost-effective manner.

Alvie McClaran – Vice President of Civil Division
Alvie McClaran, SDR VP of Civil Division, Registered Professional Engineer has 10+ years of experience in civil engineering design and project management. Experience with various government entities including EPA, FEMA, USACE, and DOT

Sonny Sims – Senior Project Manager
Sonny Sims, SDR's Senior Project Manager, an experienced and Disaster Debris Removal Project Manager who is consistent in delivering client satisfaction in our safe practices, quality control and pace of work. Mr. Sims is an ISA certified Arborist, and has completed over 89 disaster debris removal projects over 30 years.

Jon Jezowski – Controller
Mr. Jon Jezowski manages accounts payable and provides weekly progress payment reports to subcontractors ensuring on-time progress payments. Attentive to detail and committed to accuracy, ensuring SDR clients are served with integrity and efficiency. Oversees an office staff who supplement his skills, further extending the overall precision with which disaster response and recovery project records are maintained. The administrative operations of SDR often receive high praise from the clients served, stating records are correct, often requiring little review or oversight.

WORK EXPERIENCE

Southern Disaster Recovery, LLC
Quality Assurance Director, August 2023 – Present

- Ensuring SDR provides exceptional service to all communities we serve.

Clay County Division of Emergency Management – Clay Co., FL
Director, 2015 – 2023 Retired

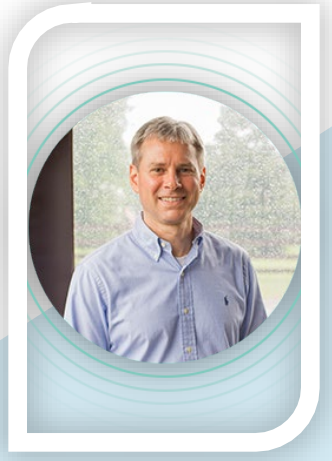
- Assume responsibility for the management of overall functions of emergency operations center (EOC) during EOC activations.
- Organize and facilitate a variety of public education events/speeches for emergency preparedness.
- Create and execute a number of large-scale multi-hazard and multi-jurisdictional training exercises for city, county, state, and federal levels.
- Hold accountability in managing multimillion-dollar budgets, grants, and recovery processes for the Emergency Management Division and County government.
- Serve as the incident commander lead for the State of Florida's Disaster Incident Management Team (IMT), responsible for the deployment of teams to areas affected by disasters all over the nations to support the state and local governments' response and recovery efforts for catastrophic events.
- Overseen 15 federally declared disaster events.

Key Highlight:

- Revamped the emergency management plans and structure upon relocation from a 900 sq. ft. EOC to a 12,000 sq. ft that enabled "normal" EOC functions.
- Received fast-track, progressive promotions for demonstrating excellent work performance.

Deputy Director, Public Safety 2010 - 2015

- Built strong relationships and work with all partner agencies involved with event management, response, and recovery within Clay County and throughout the state of Florida.
- Contributed to the development and execution of a number of large-scale multi-hazard and multi-jurisdictional training exercises for city, county, state, and federal levels.
- Developed and organized the county training programs for employees and partner agencies in a disaster response.
- Backfilled and supported the Director's duties as needed.



Jon Jezowski
Controller

PROFILE

- Financial Administrator with 28 years of experience managing the financial needs of a church that had grown in attendance from 500 to 800 with church revenue in 2021 of $1.9 million.

ACCOMPLISHMENTS

- Prepared documents for real property transactions and a construction loan.
- Disbursed payments and provided reporting on a $5 million church construction project and five building renovation projects.
- Negotiated and prepared documents for refinancing $4.5 million in debt.
- Provided information for debt-elimination plan.
- Researched employer-provided benefits for health care and retirement.
- Restructured chart of accounts to improve reporting and transitioned to new accounting software to increase efficiency and automation.

SUBCONTRACTOR PROTOCOL

MBE | WBE | DBE | Local Participation

Southern Disaster Recovery (SDR) is committed to the localities we serve and pledge to further assist in their recovery by offering subcontracting opportunities to local contractors. To ensure we have the labor resources needed, we will reach out to other subcontractors who have previously worked for us if local resources are inadequate. Depending on the size of the project SDR may subcontract up to sixty percent of the debris operations.

Our highest priority is to provide the necessary resources for your entity's full physical and economic recovery.

SDR will enlist the services of subcontractors that have been carefully vetted. SDR subcontractors:

- ✓ Meet federal and contract standards of safety
- ✓ Are experience and highly skilled
- ✓ Have all necessary liability and workers compensation insurances
- ✓ Adhere to our strict safety and drug-free work zone policies

SDR contractors are our responsibility. All management, bonding, funding, safety compliance, and documentation of subcontractors are handled by SDR's administrative staff. We utilize a comprehensive subcontractor agreement, which must be signed and on file in our office before any subcontractor begins operations on a debris removal project. That mutual agreement subordinates the subcontractor to the entity's contract with SDR.

MBE | WBE | DBE | Local Participation

While we have a large fleet of debris removal equipment, we strive to use local, minority businesses, women's business enterprises, and labor surplus area firms are used when possible whenever possible. Upon award of a disaster debris removal contract, SDR will advertise locally announcing the opportunity for area contractors to join our efforts as a viable subcontractor. Respondents then begin SDR's vetting and training process.

SDR takes all necessary affirmative steps to assure that minority businesses, women's business enterprises, and labor surplus area firms are used when possible.

1) Placing qualified small and minority businesses and women's business enterprises on solicitation lists.
2) Assuring that small and minority businesses, and women's business enterprises are solicited whenever they are potential sources.
3) Dividing total requirements, when economically feasible, into smaller tasks or quantities to permit maximum participation by small and minority businesses, and women's business enterprises.
4) Establishing delivery schedules, where the requirement permits, which encourage participation by small and minority businesses, and women's business enterprises.

5) Using the services and assistance, as appropriate, of such organizations as the Small Business Administration and the Minority Business Development Agency of the Department of Commerce; and
6) Requiring the prime contractor, if subcontracts are to be let, to take the affirmative steps listed in paragraphs (1) through (5) of this section.

The involvement of the entire community is crucial to the full economic and social recovery from a disaster situation. To the that end, we encourage all subcontractors in our employ to patronize and support other local businesses to further strengthen and revitalize the area throughout recovery operations.

Your satisfaction with SDR depends largely upon our subcontractors' performance. To ensure efficient and seamless operations, SDR provides:

- ✓ Quality control
- ✓ Teaming efforts with the monitoring firm
- ✓ Clear and frequent communication to ensure satisfactory outcomes

PAST PERFORMANCE SUMMARIES

2024-2025 Hurricane Helene Project Description for Simultaneous Contracts Within Four States and 35 Independent Political Jurisdictions, SDR successfully executed large-scale debris management across four states and Collected 9,400,000 cubic yards of debris within 35 jurisdictions. The project encompassed ROW debris collection, waterway debris removal, and private property debris removal. Utilized cutting-edge technology and specialized equipment to ensure efficiency and compliance with FEMA guidelines. Prioritized safety, financial integrity, and operational excellence throughout the project. Delivered results with unwavering commitment to subcontractor support and environmental stewardship.

2023 – Hurricane Idalia, Hurricane Idalia was a late August, western Caribbean tropical system that threatened the entire western peninsular Florida and Big Bend Florida. SDR pre-staged Project Managers all along the projected impact area from the Tampa Bay region to Big Bend Florida and Southern Georgia. SDR was in place with our pre-event contract in Gilchrist County, FL and because of past years' training and exercises, we moved seamlessly with the County response and recovery. SDR provided emergency resources to Books County, GA and Clinch County, GA. Crews initially worked to "make safe" the transportation corridors and then begin the task of debris removal and the recovery process.

2023 – GA Tornado, After Georgia Tornados in 2023, SDR responded to support Butts Co., City of Griffin and Spalding County's Debris Removal Services. From 1/18/2023 to 9/21/2023, SDR processed 303,877 CYD of debris valued at $5,026,758.00 in the City of Griffin. From 1/19/2023 to 8/1/2023, SDR processed 487,913 CYD of debris valued at $6,588,294.00 in Spalding County. From 1/21/2023 to 4/15/2023, SDR processed 127,737 CYD of debris valued at $3,002,290.00 in Butts Co.

2022 – Hurricane Ian, City of Edgewood, FL: SDR responded to Hurricane Ian damage in the City of Edgewood, FL. Work included removal of woody/vegetative disaster debris as well as removal of dangerous leaning trees and hanging limbs as well as hazardous stumps. A later hurricane, Hurricane Nicole, caused additional damage in the City that was removed as well. These small projects were completed in record time and to the satisfaction of the City.

2022 – Mitigation and Repair Projects, FL: SDR completed mitigation and repair projects in the State of Florida. SDR conducted emergency Beach and Dune Restoration in St. Lucie County, FL. These work efforts restored the dune line in the southern end of St. Lucie County and mitigated the impact of future storm surge flooding events. SDR also completed road repair in the Northwest Florida Water Management District to restore access following damage from Hurricane Michael and subsequent storms.

2022 – Hurricane Ida, LA: SDR teamed with Dynamic Corporation to win disaster debris removal contracts in Plaquemines Parish and South LaFource Levee District, LA.

Construction & Demolition Debris

- All waste streams are safely collected consistent with contractual requirements, environmental sensitivity and organized to expedite community recovery
- C&D collected as a separate waste stream and either direct hauled to final disposal or hauled to a TDMS for further segregation of materials and/or reduction

PAST PERFORMANCE SUMMARIES

Hurricane Ida made landfall as 1 of the 3 historical Category 4 hurricanes that have impacted Louisiana. Hurricane Ida made landfall at Port Fourchon; putting the strong side of the storm and storm surge to devastate Plaquemines Parish. SDR removed 549,000 CY of debris in Plaquemines Parish and 282,390 CY of debris in South Lafource Levee District. Waste streams included marsh grass, woody/vegetative, C&D, HHW, White goods.

2021 – Tropical Storm Fred, NC: SDR's NC State disaster debris removal contract was activated by Haywood County, Town of Clyde, Town of Canton and Buncombe County, NC to provide rapid debris removal from the devastating effects of the tropical system rains in mountainous terrain. Tropical Storm Earl produced extraordinary rainfall resulting in the Pigeon River swelled 19.6 feet above normal flow; the resulting flood and damage resulted in 6 deaths and over $300 million in damage. SDR removed over 66,000 CY of flood debris from the road ROW and river to protect property and help recover the community. Source location, debris type, and volumes were documented using ADMS supporting accurate invoicing and FEMA reimbursement.

2021 – Winter Storm Uri, KY: SDR was chosen by Carter Co., Boyd Co., Elliott Co and Lawrence Co. KY to help their Counties recover from the devastation of the ice storm Uri North – Eastern, KY in March 2021. From March 4th to August 30th, SDR removed in total 641,800 Cubic Yards and 540 tons of the debris valued at $18,574,100.00. Source location, debris type, source and documentation tracked using an ADMS system for 2 of the counties; the 3rd county self monitored and used the SDR paper ticketing system for documentation.

2021 – Oconee Co. Creek/Stream Debris Removal The project is limited to the area 40 feet of top of bank on the creek/stream and includes the removal of fallen/damaged trees within 2020's tornado path in the City of Seneca/Oconee County. From 4/22/2021 to 6/19/2021, SDR processed over 62,000 CYD of water debris valued at $1,575,300. Source location, debris type, source and documentation tracked using the SDR paper ticketing system for documentation.**2021 – GA Tornado, City of Newnan, GA:** After Georgia Tornados in 2021, SDR responded rapidly to support City of Newnan's disaster response and recovery efforts. SDR's contract with the City of Newnan including disaster debris removal of numerous waste streams (woody, vegetative; C&D, HHW, white goods/appliances, etc.) as well as removal of dangerous leaners, hangers and stumps. Woody, vegetative debris was reduced by grinding and then hauled for beneficial re-use. Source location, debris type, source and documentation tracked using an ADMS system. From 3/29/2021 to 8/6/2021, SDR processed over 388,000 CYD of debris valued at $5,481,300.00.

Household Hazardous Waste

- All waste streams are safely collected consistent with contractual requirements, environmental sensitivity and organized to expedite community recovery
- HHW is typically collected following first pass of Vegetative and C&D material. HHW is manually loaded into a lined or non-permeable container on a trailer or truck and hauled to a County aggregation site or final processing site.
- In large scale C&D producing events; a field expedient HHW cell is constructed in the TDMS for any material that inadvertently arrives at the TDMS

PAST PERFORMANCE SUMMARIES

2020 – Iowa Derecho, Waterway Debris Removal, City of Marion, IA: After the Derecho hit much of central and eastern Iowa in August 2020, Crop damage was extensive across the state and tree damage was catastrophic in the City of Marion. SDR was selected by the City of Marion for their Waterway Debris Removal. Source location, debris type, source and documentation tracked using an ADMS system From Dec. 1, 2020, to June 30, 2021, SDR has collected 289,200 cubic yards of waterway debris for this FEMA Public Assistance (PA) funded project debris at $11,379,600.00.

2020 -- SC Tornado Oconee Co. SC: In April of 2020, a strong line of storms went through Oconee County, SC and was later confirmed a tornado. SDR was selected by the South Carolina Department of Transportation (SCDOT) for debris grinding and haul out in Oconee County. Throughout the duration of the 10-week debris grinding and disposal project, from 4/21/2020 to 6/26/2020, In total, SDR processed over 501,504 cubic yards of debris valued at $2,748,000.

2020 – Iowa Derecho, Debris Removal, City of Marion, IA: On August 10, 2020, a Derecho hit much of central and eastern Iowa with straight line winds over 100 mph that was sustained for nearly 30 minutes in many locations. Crop damage was extensive across the state and tree damage was catastrophic in the City of Marion. SDR was selected by the City of Marion for their debris collection and disposal efforts. Source location, debris type, source and documentation tracked using an ADMS system From 8/17/2020 to 12/16/2020, SDR collected 730,000 cubic yards with a total project value of $12,988,800 of debris for this FEMA Public Assistance (PA) funded project.

2019 – Hurricane Dorian, BEACH BERM RESTORATION BREVARD COUNTY, FL: Due to damage to public beach access areas as a result of Hurricane Dorian in 2019, South Beaches from R-142 to R-213 in Brevard County, Florida shoreline required beach and dune restoration. From 10/15/2019 to 4/21/2020, SDR successfully completed the original unit price contract by placing 99,841 CY of sand, which was sourced from quality local mines, with a total project value of over $3.3 million. The scope of work mandated that only high-quality sand sources be utilized, and that the project's stringent timeframe be adhered to. Southern Disaster Recovery successfully met both criteria to the satisfaction of the client's Project Manager.

2019 – Hurricane Dorian Debris Removal; Outer Banks, North Carolina: Hurricane Dorian impacted Outer Banks North Carolina with significant storm surge flooding and wind damage. SDR had eight (8) local government contracts activated; Hyde County, Tyrrell County, Town of Columbia, Dare County, Currituck County, Town of Kill Devil Hills, Town of Duck, Town of Southern Shores. Each contract included debris management (ROW removal for woody, vegetative material; Construction and Demolition debris; Household Hazardous Wastes; White goods/Appliances). SDR operated seven (7) Temporary Debris Management Sites (TDMS); three (3) of them were in environmentally sensitive areas within the National Park Service boundaries. Source location, debris type, source and documentation tracked using an ADMS system. From Oct 2019 to May 2020, SDR processed over 316,890 CYD of debris valued at $7.5 million.

2018-2019 - California Wildfire Pacific Gas & Electric Utility Line Debris Removal: In November 2018, California suffered the most devasting wildfire in its history. The Camp Fire burned for approximately two weeks, until it was considered 100% contained. The ensuing tree debris caused perilous conditions in many areas serviced by Pacific Gas and Electric. As a result, Southern Disaster

PAST PERFORMANCE SUMMARIES

Recovery was contracted to remove debris from those areas. In an effort to be proactive in preventing subsequent property damage and power outages, From Nov 13, 2018 to April 30,2020 Southern Disaster Recovery completed dangerous tree removal projects for Pacific Gas and Electric in California. Thousands of trees have been cut using multiple work crews. The project total is valued at over $48 million.

White Goods

- All waste streams are safely collected consistent with contractual requirements, environmental sensitivity and organized to expedite community recovery
- White goods are typically collected between 1st and 2nd pass. White goods are manually loaded onto a trailer or truck and hauled to a staging area for processing. White goods are inspected, putrescent material removed, and refrigerant removed by a certified technician.
- White goods taken to a recycler following processing.

2018 - Hurricane Michael Debris & Tree Removal Wiregrass Electric Cooperative, Inc., Hartford, AL: Following Hurricane Michael, Southern Disaster Recovery was contracted by the Wiregrass Electric Cooperative, Inc. (Wiregrass), with headquarters in Hartford, Alabama, to collect, remove, and dispose of hurricane generated debris along their 30-foot utility rights-of-way. The project scope included all the Wiregrass managed territory in Houston County, Alabama. In total, From March 12, 2019 to April 28 2019, SDR processed over 52,000 cubic yards of debris valued at nearly $2.1 million. Source location, debris type, source and documentation tracked using the SDR paper ticketing system for documentation.

2018 – Tree Removal, Alligator Creek & Sampson River Flood Abatement, Board of County, FL: Following Hurricane Irma in 2017, the Bradford County, Florida Alligator Creek and Sampson River waterways were obstructed with debris and uprooted and/or fallen trees/tree limbs. Southern Disaster Recovery successfully completed not only the original fixed price contract of 14.7 miles of waterway at $1.6 million, but also additional contract amendments, for a total project amount exceeding $2.5 million. The original project began in September 2018 and was to last no more than 220 days. With the added tributaries, the project completion date extended to April 2019.

2018 - Hurricanes Michael & Florence: Hurricane's Michael and Florence ravaged the Southeastern and Gulf Coasts. As the Prime Contractor for several debris removal projects, Southern Disaster Recovery (SDR) managed eleven contracts in North Carolina and South Carolina. From Sep 2018 to Jan 2019, SDR successfully processed over 248,200 cubic yards of Vegetative and C&D debris valued at over $5.2 million while also simultaneously performing debris removal as a result of the catastrophic California wildfires that has continued into 2019.

2017 - Hurricane Irma: Southern Disaster Recovery (SDR) managed multiple vegetative and C&D debris removal contracts resulting from Hurricane Irma. In Georgia, we were the prime contractor on five debris removal contracts and operated as the prime sub on eight contracts in Florida and Georgia. In total, From Oct 2017 to March 2018, SDR processed over 1,500,000 cubic yards of Vegetative and C&D debris on contracts totaling $18.7 million. Outside of debris recovery and removal, SDR completed a Florida beach berm restoration project hauling over 317,000 tons of sand with a total contract valued at over $7.5 million.

PAST PERFORMANCE SUMMARIES

2016 - Hurricane Matthew: Hurricane Matthew affected the coasts of Georgia, South Carolina, and North Carolina in October 2016. SDR managed multiple vegetative and C&D debris removal contracts in eight SCDOT Counties; Hunting Island, SC; the town of Summerville; the city of Lumberton, NC; and seven GDOT Counties. From Oct. 2016 to Feb 2017, SDR processed over 1,000,000 cubic yards of Vegetative and C&D debris on contracts totaling $16.5 million.

2015 - Historic SC Flooding: Severe flooding caused catastrophic damage in South Carolina during 2015. SDR managed debris removal contracts for C&D debris on state SCDOT roads in Horry and Georgetown counties, Georgetown County roads, and roads within the city of Georgetown, SC.

2015-2016 - Butte Wildfires, California: Following wildfires along utility lines in San Andreas, California, SDR was contracted to do a $3.5 million tree removal project employing and managing up to 100 laborers comprising 25 work crews. The completion date is from Oct 21, 2015, to Dec 23, 2015.

2014 - Winter Storm Pax: SDR simultaneously directed debris removal and hauling operations for seven different contracts in four South Carolina counties, including county and SCDOT maintained roads, school and county properties, and public service authority rights-of-way as well as creek debris removal. In total, from Feb 13, 2014 to Aug 8, 2014, SDR collected and processed over 2,000,000 cubic yards of debris valued at over $48 million.

2012 - Hurricane Isaac, Louisiana: Al McClaran oversaw vegetative, as well as construction and demolition (C&D) debris removal in parts of LaPlace, Louisiana (St. John the Baptist Parish). The C&D debris in the parish was the result of flooding from the hurricane. Approximately 25,000 cubic yards of debris was collected.

2011 - Winter Storm Alfred, Connecticut: Al McClaran, as Senior Project Manager, oversaw debris removal operations in fifteen townships of western Connecticut on DOT roads. This project lasting three months required the use of forty debris hauling units and thirty-two bucket truck crews. Approximately 100,000 cubic yards of debris were collected.

2011 - Hurricane Irene, North Carolina: Al McClaran, as Senior Project Manager, oversaw debris removal operations for North Carolina DOT in Edgecombe, Wayne, and Halifax counties. This operation involved the collection of vegetative debris and the removal of hazardous trees and stumps. Operations began in Edgecombe County but within a couple of weeks spread to additional counties because of the non-performance of other contractors. Debris operations in these counties were then conducted simultaneously. The work included all county roads and Federal Aid Highways (FHWA) including sections of Interstate 95. Operations on I-95 required lane closures. Debris collected was hauled directly to county landfills where it was later reduced by grinding. Nearly 20,000 tons of debris (roughly 100,000 cubic yards) was collected.

PAST PERFORMANCE SUMMARIES

2011 - April Tornado, Rabun County Georgia: Al McClaran, as Senior Project Manager, oversaw disaster debris recovery operations. Mr. McClaran and the County Project Manager reviewed the two TDRS sites prepared by the county near Lake Burton. Mr. McClaran advised the county that they would save money by using only one site nearest to the largest concentration of damage. Within forty-eight hours of the Notice to Proceed, debris pickup commenced. This operation was primarily the collection of vegetative debris (around 50,000 cubic yards) which was reduced by grinding. Most of the mulch produced was hauled to a biomass plant in Dillard, GA for the production of electricity.

DEBRIS MANAGEMENT SITE PLAN

1. General

Southern Disaster Recovery (SDR) will provide all management, equipment, operators, and laborers required for the establishment, operation, and maintenance to accept, process, reduce, incinerate, and dispose of disaster related debris. These Temporary Debris Management Sites (TDMSs) may utilize air curtain incineration and/or mechanical chipping/grinding to reduce vegetative and clean woody debris. The TDMSs may also be used as transfer points for depositing mixed Construction and Demolition (C&D) or reducing C&D material by compaction prior to reloading for final transport to an authorized landfill. SDR will manage the TDMSs to accept debris collected under other contracts.

2. Site Operations Plan

Following identification by the contracting authority of the TDMSs, SDR will develop a unique Site Operations Plan for each site.

The plan will address the following:

- ✓ Site management, to include point-of-contact and organizational chart
- ✓ Site ingress and egress
  - Tracking rock coming on/off roadway
- ✓ Site preparation, including clearing, erosion control, and grading
  - Silt fencing in those areas that require it.
- ✓ Traffic control procedures
- ✓ Site security
- ✓ Site safety and health
  - Fire Extinguisher
  - First Aid kit
  - personal sanitation (porta-a-let)
  - hand washing station
- ✓ Site layout/segregation plan, to include as appropriate: air curtain incineration areas, mechanical chipping/grinding areas, ash storage or disposal areas, hazardous waste containment area, contractor work area, inspection tower, and safety zone clearance areas (100-foot clearance area between stockpiled debris and incineration operations, and 1000-foot clearance area from structures)
- ✓ Appropriate Heavy Equipment for the Operation
  - 1000 hp horizontal grinder
  - Air curtain incinerator (ACI)
  - Tracked or wheeled Excavator; bucket with thumb to load Grinder or ACI
  - D-4 or Greater Dozer for mulch pile management
  - For high capacity TDMS locations; a second tracked Excavator to stack woody, vegetative material
  - Water truck for dust control and for air curtain incineration operations
- ✓ Environmental mitigation plan, including considerations for smoke, dust, noise, traffic, safety buffer zones, storm water runoff, historic preservation, wetlands, and endangered species as appropriate

3. Worksite Evaluation

While an entity's Risk Management Department may employ the appropriate and available loss control resources to evaluate and identify any potential exposures to worksite safety or health vulnerabilities, Southern Disaster Recovery (SDR) is committed to practices that reduce or eliminate incidences of or exposure to falls, electrocution, noise, cut/laceration hazards, high ambient temperatures, hazardous substances, or infectious materials.

Standard Safety Training

SDR is committed to deliver comprehensive health and safety training prior to employees being deployed to a project. We provide:

- General hazard instruction, including site conditions and work expectations.
- Dialogue regarding the common stressors for response and recovery workers, such as extended work shifts, adaptation issues, less than ideal sleeping and eating conditions, and critical incident stress concerns.
- Site-specific training as to unique hazardous conditions and the proper identification of specialized controls, equipment, work practices, and the PPE required. (NOTE: The additional controls may be identified in a Job Hazard Analysis (JHA) specifically developed for the task or operation.)
- Daily job briefings for the work plan, anticipated hazards, and required exposure controls.

Hazard Control

In conjunction with the entity, we will employ all appropriate actions to mitigate hazards according to the hierarchy of controls listed below:

- **Elimination or substitution:** Eliminate the hazard from the work area (e.g., repair or remove fallen electrical power lines before allowing other work to proceed in the area). Although desirable, elimination and substitution may not be options for most airborne/chemical hazards created by a natural disaster.
- **Engineering controls:** Take steps to reduce or eliminate exposure to a hazard by guarding the pinch points associated with a machine's moving parts, providing ventilation to a permit-required confined space, using heavy equipment with temperature-controlled cabs, and placing barriers around the swing radius of rotating heavy equipment.
- **Work practice or administrative controls:** Implement work procedures that reduce the probability of exposure. For example, use well-rested crews and daylight hours to perform hazardous or unfamiliar tasks, take frequent breaks during hot weather, remove non-essential personnel from the area during certain task/operations, and decontaminate equipment and personnel after contact with contaminated floodwater or chemicals. When possible, use water to suppress dust and work up-wind in dusty conditions. Where extensive hot-work is performed in the form of cutting and burning, use extended length torch handles to increase the distance from the individual's breathing zone to the generation of toxic fumes.
- **Personal Protective Equipment (PPE):** As appropriate, use proper PPE for the hazard and level of exposure. SDR will provide all necessary PPE for its employees at no cost to the employee.

General PPE recommended for all response/recovery tasks:

- **Foot protection:** ANSI-approved protective footwear for the activity being performed. Give special consideration to water protection in wet or flooded areas.
- **Eye protection:** Have safety glasses with side shields for those tasks requiring this PPE..
- **Head protection:** Hard hats or helmets in areas where overhead or electrical hazards exist.

- **Appropriate work clothing:** Ensure protection where there is potential for cuts, abrasions, irritation, or overexposure to sunlight. Consideration should be given to heat and cold stress issues.
- **Hand protection:** Protection should be specific to job hazards (e.g., heavy-duty leather work gloves for handling debris with sharp edges and/or chemical protective gloves appropriate for chemicals potentially contacted).

Provide the following additional PPE, as required:

- **Eye and face protection (specialty):** Goggles, full-face shields, or other suitable protection as needed to protect against flying objects and liquid splash hazards.
- **High-visibility apparel:** High-visibility safety apparel and headwear along with other traffic safety measures, in areas where vehicles or heavy equipment are used. This is especially important when working in temporary roadway work zones.
- **Hand protection (specialty):** Appropriate gloves suitable for the tasks being performed (balancing dexterity with protection). Considerations include biological hazards (blood borne pathogens), chemical hazards, and physical hazards (abrasions, cuts, punctures, and heat). Vibration-dampening gloves should be used when vibration hazards exist (e.g., during jackhammer use).
- **Work clothing and gear (specialty):** Lanyards, harnesses, and supports for fall protection, and chemical protective clothing where contact with chemicals may occur.
- **Leg protection:** Snake boots or snake gaiters to protect against snakebites in areas where snakes are indigenous. Chaps when using chain saws.
- **Respiratory protection:** Appropriate respiratory protection necessary for the circumstances will be provided. **In all cases, surgical masks and dust masks that are not NIOSH-approved are not considered suitable respiratory protective devices.**
- **Hearing protection:** Earmuffs and/or earplugs should be utilized when working around potential noise sources. Hearing protection must be worn when noise levels exceed 90 dBA. (NOTE: If a conversation cannot be maintained in a normal speaking voice with a person who is standing at arm's length (approximately 3 feet), the noise level may exceed 90 dBA.)

Specialized PPE and procedures are required for employees who may be exposed to other hazards for which additional protection and procedures are needed (e.g., structural firefighting, confined-space entry, response to hazardous materials releases, asbestos or lead abatement, welding, cutting, and burning). If the evaluation of the work area/conditions reveals the presence of these explicit situations, the operation will be reassigned to a specialized contractor or employee(s) specifically trained and equipped to handle the hazard.

Training

Employees should be properly trained to recognize and avoid unnecessary hazards while performing any disaster debris related tasks. It is preferable to only use employees who are already trained and proficient in the required skills for the job; however, should other employees be needed, job-specific training will be provided prior to the assignment. This training will typically be provided by the appropriate supervisory personnel and includes specific safety training, selection and use of appropriate PPE, and any other instruction as deemed necessary for the task or operation.

Note: Contracts with private vendors will require that they adhere to all industry safety standards including, but not limited to OSHA regulations where applicable, as well as the above outlined standards. Entity and contractor personnel may participate in general training/briefings as the

situation warrants. Verification of any required training will be maintained by the appropriate personnel department and be available for inspection upon request.

Instances of observed non-compliance with any required procedure or regulation will be reported to the onsite Project Manager with appropriate remedial action taken as necessary

4. TDMS' Foreman -Day/Night Operations

SDR will provide working foremen for both day and night operations (if night operations conducted), who will be responsible for all oversight, including traffic control, dumping operations, segregation of debris, incineration and mechanical grinding operations, and site safety. This information will be compiled with other daily reporting data and will be provided to the contracting authority by the Debris Operations Manager.

5. Site Assessment

Immediately upon taking occupancy of any site, SDR will conduct an initial site assessment to determine baseline conditions. This assessment will include visual inspection in the presence of a Contracting Authority representative, documentation of any existing improvements to or on the site, aerial and/or ground photography/videography, random soil samples if warranted, water samples from any existing wells located on the site, and review for any volatile organic compounds if warranted. Spot soil samples will be taken at the areas considered for the temporary storage of household hazardous waste, ash, and fuel storage areas. Photographs and/or maps will be updated as the use and configuration of the site changes.

6. Site Design

The sites will be designed so that air curtain incinerators are located a minimum of 1,000 feet from the nearest occupied building or as specified by the applicable state or local environmental regulatory entity. The area within 50 feet of the burn pits will be cleared of vegetative cover to reduce fire hazard. If pit burning is utilized, and the pit is situated on pervious soils, an impervious layer of clay, limestone, or synthetic material will be provided.

Vegetative debris will be centrally stored near the air curtain incinerators, but at a minimum of 100 feet away from the air curtain incinerators to reduce potential fire hazard. Roads should be designed with separate ingress and egress, where possible, to expedite truck flow in and out of the site. If possible, large turnaround areas will be constructed to enable simultaneous movement of multiple trucks.

To reduce hazards from flying debris, wood chipping operations will be located a minimum of 250 feet from all areas where personnel are actively working. If needed, access roads will be constructed at each site. Crushed rock or gravel will be used to form a base that will prevent soil erosion, reduce dust generation, and provide truck access during inclement weather.

Additional applications of rock may be necessary for road maintenance as the project progresses.

7. Site Preparation

SDR will be responsible for preparing the TDMSs to accept debris. This preparation may include clearing, erosion control, grading, constructing and maintaining haul roads, entrances, dumping pads, and burn pits. SDR will provide portalets, if needed. SDR will protect existing structures at the site(s).

8. Site Security

The TDMS is not a public access site. SDR will place signs up identifying the purpose and nature of the site and that it is not open for public access.

9. Inspection Towers

SDR will construct and maintain one Inspection Tower at each TDMS site. SDR and Contracting Authority personnel will conduct inspections, load volume estimations, and photograph each load of debris delivered to the site from the tower. Existing structures serving this purpose may be utilized following coordination between SDR and the Contracting Authority. Tower locations may be changed to support the progression of debris storage and reduction as well as normal traffic patterns on the site.

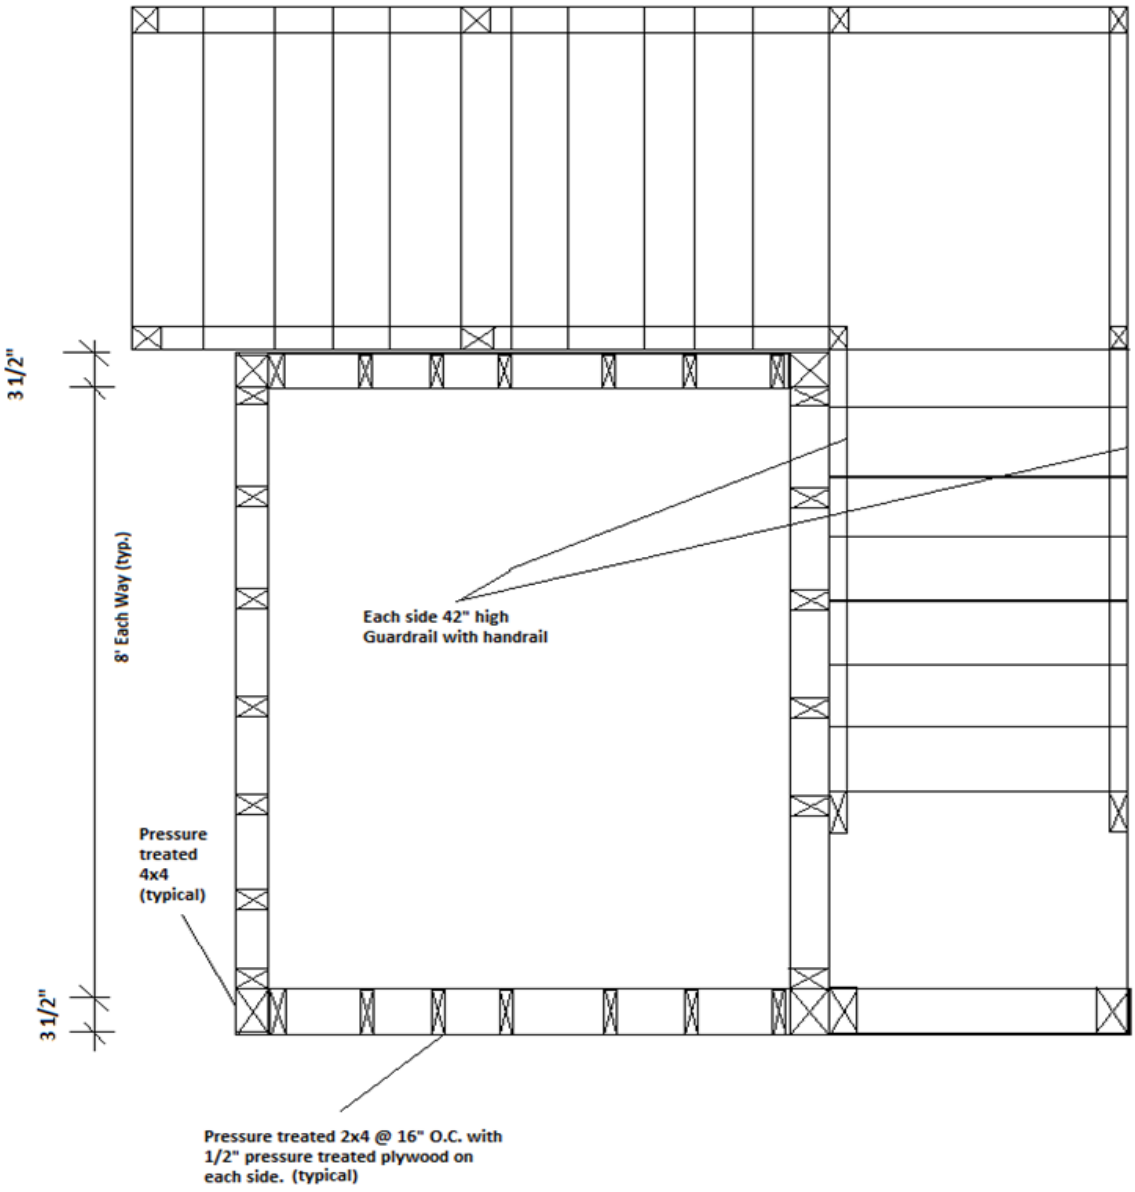
The towers may be constructed using pressure treated wood or metal scaffolding materials. The floor elevation of the tower will be such that it affords the Contracting Authority representative(s) and SDR personnel a complete view of the load bed of each piece of equipment that hauls debris to the site while allowing for the easy transfer of the debris removal load ticket between the Contracting Authority representative and the vehicle driver. The floor area will be a minimum of 8' x 8'. A 4' high wall, sturdily fastened to the structure to eliminate fall hazards, will protect the perimeter of the floor area. A roof will be constructed over the floor area, constructed to provide a minimum of 6'-6" of headroom. Steps with a handrail will provide access to the Inspection Tower.

In lieu of tower construction; properly sized all terrain scissor lifts may be used.

- ***(Tower design is shown in the following two pages)***

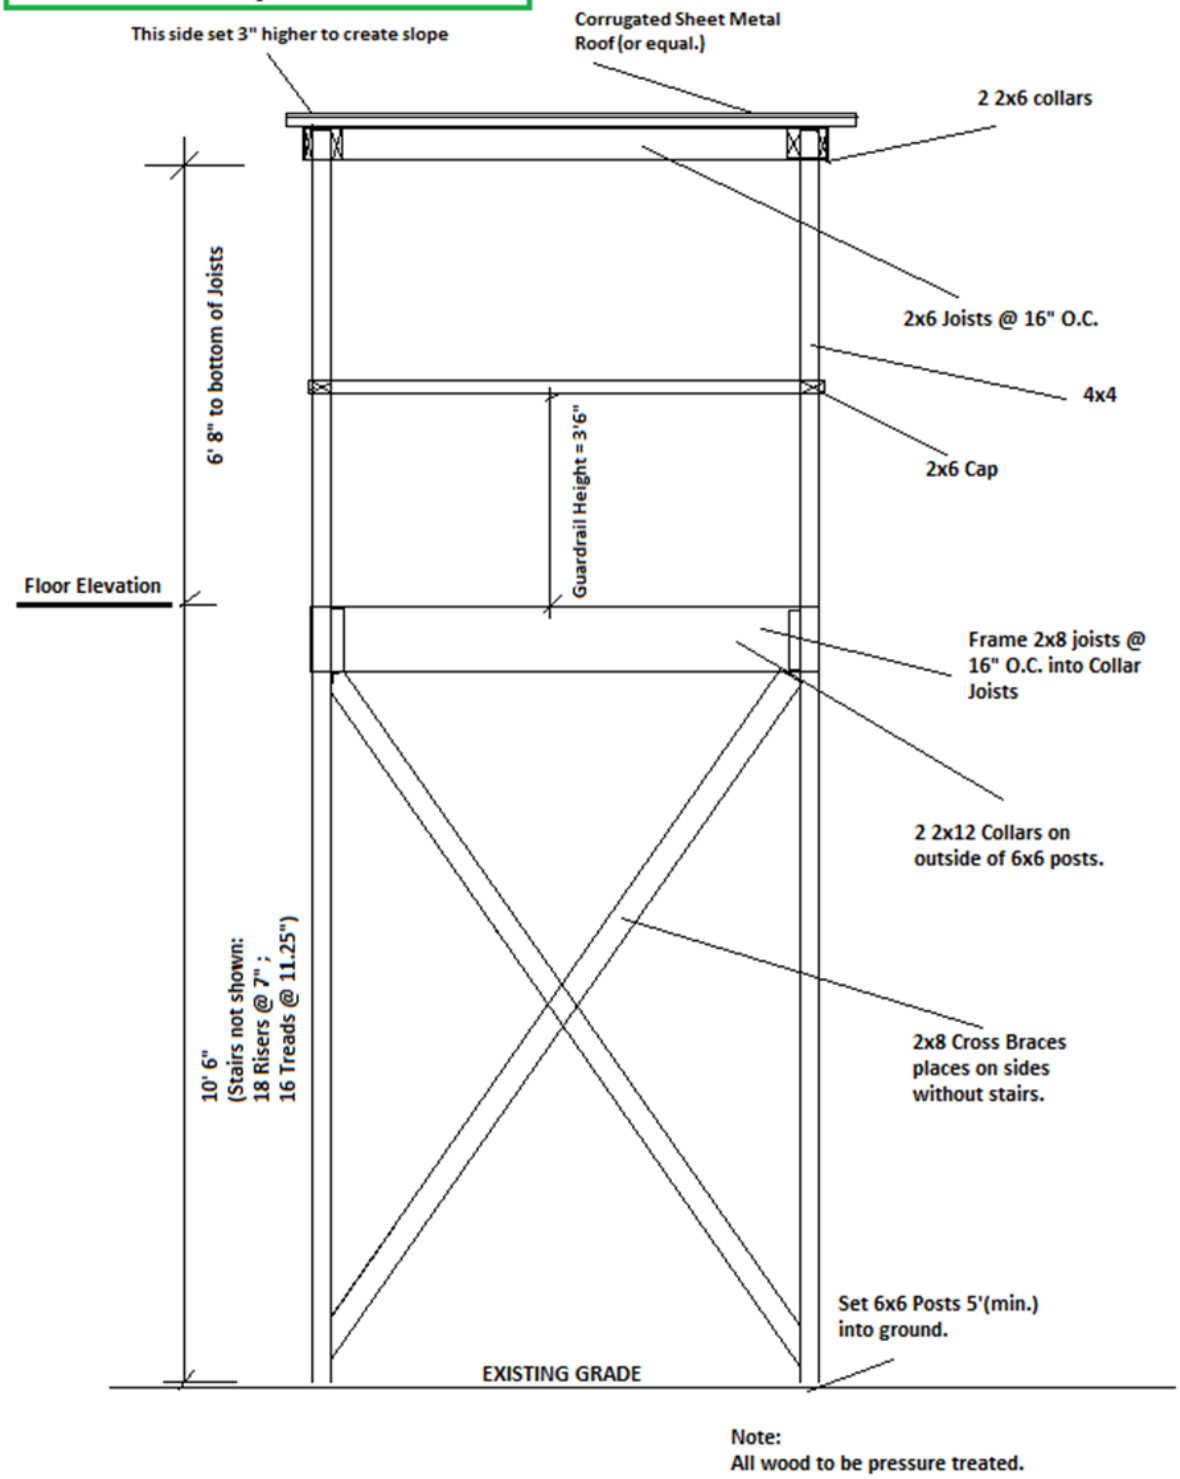
DEBRIS MANAGEMENT SITE PLAN

Plan View -
Standard Inspection Tower



DEBRIS MANAGEMENT SITE PLAN

Section View - Standard Inspection Tower



Note:
All wood to be pressure treated.

10. Debris Unloading and Segregation

Trucks containing any waste other than vegetative debris will be directed through the disposal site to the C&D debris area of the disposal site.

Trucks insufficiently loaded will be noted and reported. Photos and live video may be utilized to record actual hauling equipment.

Trucks containing vegetative debris will be directed to the debris depository areas of the sites in an orderly manner via the ingress. Upon obtaining clearance from the designated flag person at the depository area, the trucks will back up, dump their load, and exit the site via the egress.

Once the debris has been deposited at the base of the debris storage pile, dozers and track hoes will be used to move and pile the debris. Debris piles will be compacted and constructed with a slope to prevent loose debris from rolling or falling down the sides of the piles.

When feasible, effort will be made to salvage and/or recycle debris.

11. Debris Incineration

Debris eligible for incineration will be moved to the air curtain incinerator by a front-end loader. The air curtain incinerator will be loaded using a trackhoe. Burning will continue until the box/pit is approximately 1/3 full of ash. At that point, any large, partially burned logs will be removed and placed on an earthen area near the box/pit. After the ash has cooled, it will be removed and placed in an adjacent storage area. The storage area will be bermed or diked to prevent ash from being transported from the pit by storm water runoff during a rainfall event.

12. Debris Chipping

Horizontal grinders will be set up at each disposal site to convert some of the debris into wood chips suitable for use as mulch or fuel chips. A knuckleboom loader or trackhoe will be used to load debris into the grinder. The grinders will be primarily used for debris with high soil content such as stumps, which are not suitable for incineration. Due to the noise generated by the grinders and the hazard of debris being ejected from the tub, the grinders will be set up at least 150 to 200 feet from all other work areas. The 200-foot boundary will be marked by physical barriers, caution tape, and have appropriate signage.

A dozer should be used to stockpile mulch as it is processed by the tubgrinders. Large amounts of processed debris will produce large mulch piles. Consideration should be given to the amount of material that will be chipped and adequate space should be allotted for stockpiled mulch. The piles should be at least 50 feet away from the tubgrinder.

The temperature of the stockpiled mulch should be monitored to prevent spontaneous combustion. If the temperature approaches or exceeds 150 degrees Fahrenheit, the stockpile should be rolled to release the heat buildup. The environmental monitors will record the temperatures of all debris piles on a daily basis.

13. Fire Protection

SDR will manage all site operations to minimize the risk of uncontrolled/uncontained fire. Twenty-pound all-purpose fire extinguishers should be strategically stationed around the incinerators/burn pits and around the Monitor tower. The number of fire extinguishers will vary

depending on the size of the TDMSs. Site conditions may necessitate having additional water-filled extinguishers and readily available hand tools, such as fire rakes.

14. Ash Containment Area

SDR will contain, store, and remove ash from all incineration operations. The ash containment area will be wet down periodically for the duration of operations to prevent particles from becoming airborne.

15. Household Hazardous Waste Containment

SDR will construct a containment area at each TDMS for any hazardous waste inadvertently delivered to the site. The perimeter of the containment area will be constructed with an earthen berm or hay/straw bales that are staked in place. The area will be lined with a heavy gage, non-permeable plastic to provide a waterproof barrier. Additional heavy gage, non-permeable plastic sufficient in size to cover the entire containment area will be kept on site and used to prevent rain from entering the containment area. To direct run-off away from the protected area, the site will be sloped appropriately to provide necessary grading.

16. Site Closure

SDR will close each TDMS within 30 calendar days of completing the reduction or transfer all delivered debris to an authorized landfill. Site closure will include removing site equipment, debris, and all remnants from the processing operation; grading the site; and restoring the site to pre-occupancy conditions. The site(s) will be restored in accordance with all state, tribal, and local requirements.

SDR will be responsible for the proper disposal of non-burnable debris, ash, wood chips, and hazardous and toxic wastes.

SDR will conduct a final inspection of the site along with a Contracting Authority representative to receive final approval of the site closure.

SDR Actions to Support the City of Destin Readiness

This plan is prepared uniquely for the City of Destin and will be updated following contract award and consultation with the City.

PLANNING:

FEMA states that "applicants with a FEMA accepted Debris Management Plan at the time of an event can increase effectiveness of its debris management mission". SDR has written and supported planning for numerous FEMA approved plans. Our management team includes experienced State and Local government emergency managers who are deeply experienced in disaster debris removal operations. We will support the City of Destin in all debris removal planning activities.

TRAINING:

SDR is proficient in leading training and workshops to improve disaster readiness. We teach the FEMA Debris Management Course and conduct readiness workshops for our customers. SDR would lead or support debris management training efforts of the City of Destin.

EXERCISES:

Disaster debris management operations are a multi-discipline effort for most jurisdictions. Tabletop exercises (scenario-based discussions) are an important readiness activity to reinforce principles learned in Planning and Training. SDR would lead or support tabletop exercise (TTX) development and conduct for the City of Destin and the debris management team.

TEMPORARY DEBRIS MANAGEMENT SITE ASSESSMENTS:

Detailed site assessment for Temporary Debris Management Sites and "pre-permitting", if possible, are important pre-cursers to starting disaster debris removal operations rapidly. If TDMS locations are not properly permitted and constructed, debris removal operations cannot commence. SDR uses a very thorough documentation tool to organize TDMS assessments and document site conditions for proper permitting and construction. SDR will lead or support the City of Destin in conducting TDMS site assessments.

Mobilization and Operations Plan Objectives

- **Debris Clearance** – Roadways shall be cleared of debris as soon as possible to enable emergency and relief organizations to complete their missions in serving the public.
- **Debris Removal** – Debris shall be removed quickly and efficiently to support the community's social and economic efforts by adhering to federal funding/reimbursement requirements to maximize recovery funds for the City.

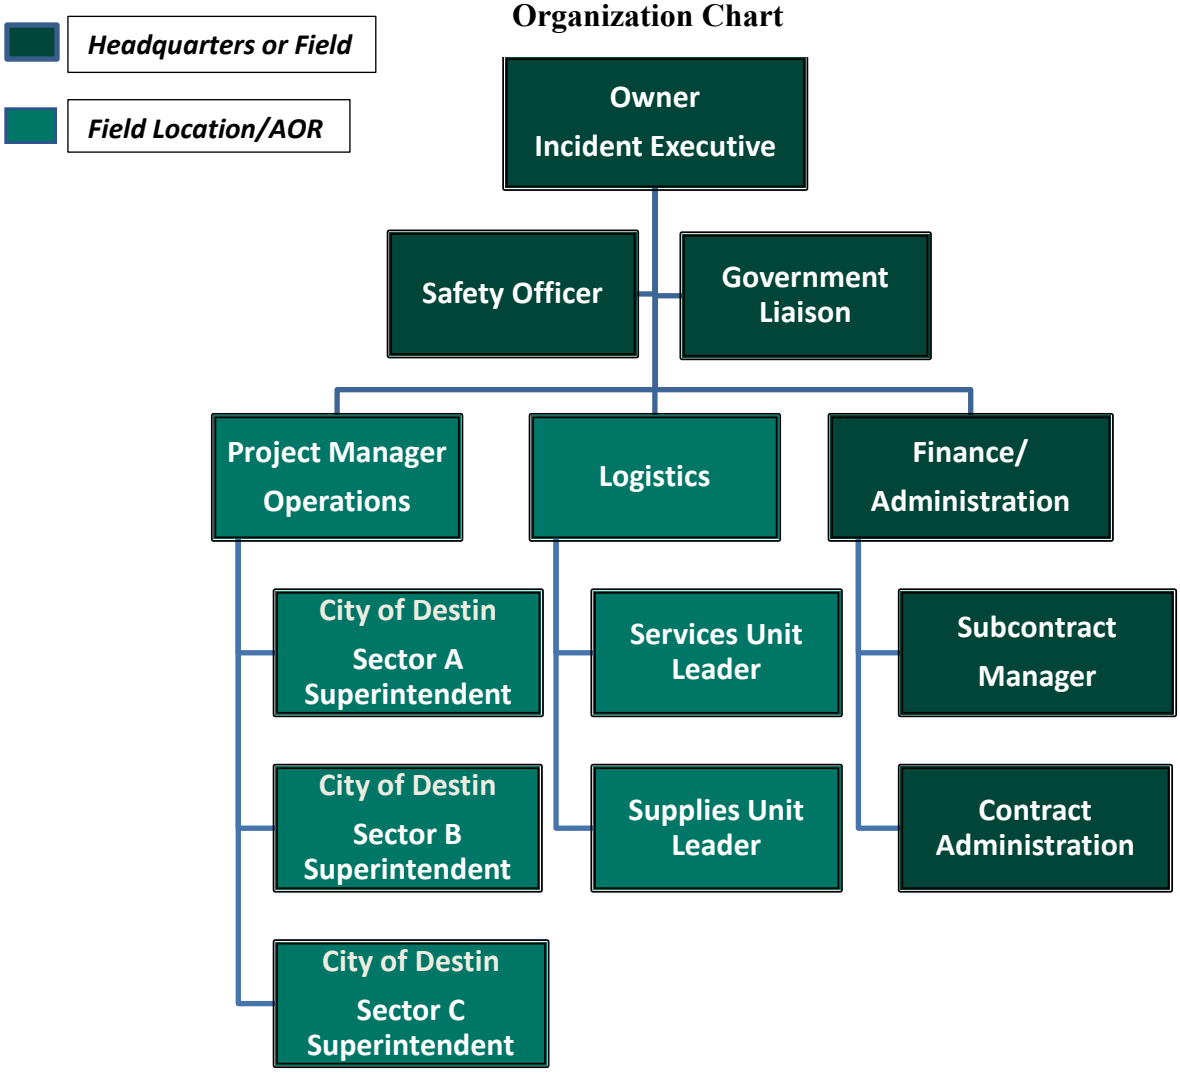
SDR Organizational Structure to Support the City of Destin Disaster Recovery

SDR uses incident command system principles to organize and manage our mission to clear disaster debris in the City of Destin. Important ICS principles in our concept of operation include; a manageable span of control, unity of command, an action planning process (work plan) and an organization structure that can expand or contract based on the work plan's objectives. The following Organization Chart illustrates our disaster operations organization chart that is then tailored to the specific disaster size and complexity.

Experienced Management Team

SDR has successfully managed to completion over 60 separate debris contracts in the Northeast US, Southeast US, Mississippi Valley and California exceeding over $120M in revenue!

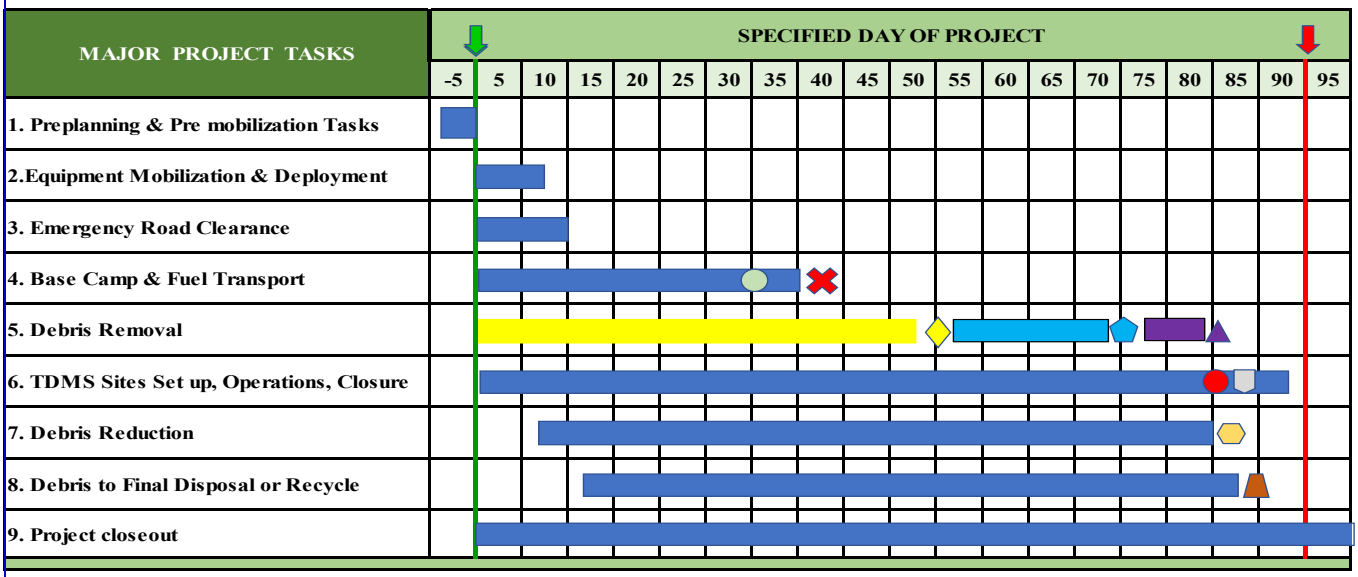
SDR Project Management Organization Chart



Disaster Debris Removal Mission General Process Map

This General Process Map (Gantt Chart) illustrates major aspects of the Scope of Work, their scheduling and timing relationship. The significance of the disaster and the interests of the City of Destin will dictate the actual length of the disaster debris removal mission.

Sample Task Order Timeline



Legend
First Pass Work
Second Pass Work
Third Pass Work

Key Dates					
Day 0		Notice to Proceed	Day 82		TDMS Closure for Receiving Debris
Day 30		Fuel Available Locally	Day 82		Debris Reduction Complete
Day 35		Base Camp Closes	Day 82		TDMS Clear of Debris
Day 50		First Pass Complete	Day 83		TDMS Final Inspection Complete
Day 70		Second Pass Complete	Day 92		Project Comopletion Date
Day 80		Third Pass Complete	Day 104		Ongoing Project Closeout Ends

Post-Storm Emergency Clearance of Roads and Rights-of-Way:

EMERGENCY ROAD CLEARANCE

Actions pertaining to the mobilization of SDR personnel, equipment and coordination with the City. In disaster response "with notice" much of this effort will occur before the disaster strikes to facilitate a minimum of 24 hours response time:

- Available personnel staffing in the local area.
- Identify and confirm landfill, transfer station locations, debris management sites, hours of operation, and availability in the local area.
- Initial notification/contact of major subcontractors committed to Team SDR.
- Establish coordination with the City and other local officials important to mission execution.

Typical Debris Clearance Crew

- Front end loader (150 hp) with operator
- Equipment transport
- 2 chainsaw men
- Foreman with communications

- Identify streets with limited access – small width, dead end, proximal ditches.
- Project Administration and Accountability – Advance coordination with subcontractors.
- Payroll and Equipment Inventory Status updates.
- Test and verify all communications.

DEBRIS CLEARANCE CREWS

SDR and Subcontract Debris Clearance Crews Committed

w/in Region	Reach Back
15 Loaders	58 Loaders
49 Chainsawmen	110 Chainsawmen
22 Equipment Transports	33 Equipment Transports

After the event has passed, SDR will immediately mobilize to the affected area. The Project Manager will arrive at the designated Post-Storm meeting location and initiate recovery activities as conditions permit within 8 hours of notice to proceed.

SDR will provide a minimum of 5 crews to commence debris clearance operations within 24 hours of issuance of a notice to proceed.

Team SDR will begin debris clearance along the primary transportation routes, rights-of-way, easements, streets, and roads identified and directed by the City. Crews will be deployed from the pre-arranged staging areas to clear debris from roads, bridges and emergency vehicle paths as required. Absent specific guidance:

- **First priority** will be given to main arterial roadways and access routes leading to EOC's, fire, police and health care facilities.
- **Second priority** will be given to streets and thoroughfares providing access to major utility systems and services, such as electric, water and gas.
- **Third priority** will be given to major highways and commercial streets, followed by residential streets and alleyways.

Quality Check

- **Five fully equipped crews operational within 24 hours.**
- **Pre work safety checks of equipment and work site completed.**
- **Crew members trained in the use of equipment.**
- **100% use of appropriate Personal Protective Equipment.**
- **Timely tracking and accounting for hourly equipment.**

DEBRIS REMOVAL OPERATIONS MOBILIZATION:

Upon receiving the *Notice to Proceed*, Southern Disaster Recovery (SDR) will immediately mobilize resources and initiate actions item as per the contract kick-off meeting and the *Notice to Proceed*.

Examples of kick off meeting expectations include:

- Establish City priorities
- Establish City clean-up goals
- Establish City's point of contact
- Establish contractor project management points of contact
- Determine how project monitoring will be accomplished
- Establish debris monitor points of contact
- Discuss any additional reporting requirements

Immediate action and planning requirements to be accomplished:

- Develop the initial Operational Period Action Plan
- Mobilize and stage equipment
- Organize debris removal assignments (Sectors and Zones)
- Establish temporary debris management site(s) (TDMS)
  - ✓ Confirm proper permitting and/or acquire permits
  - ✓ Establish site layout as per permit(s)

EQUIPMENT - Size and type determined by overall accessibility of rights-of-way and the location overhead utilities.
For maximum and safety and efficiency, SDR will apply the following standards:

Loading Equipment – All loading and moving equipment will be operated from the roadway, streets, alleys, or rights-of-way using clam shell loaders, booms, or grapple devices to collect and load debris into collection vehicles. No equipment will be operated behind the curb or outside the defined roadway shoulder/swale section or in an area that may endanger operators or work crews, unless specifically directed to do so by emergency officials.

Hauling Equipment – All trucks and trailers used to haul debris will be capable of rapidly and independently dumping loads, and, will be equipped with a tailgate. Trucks will be equipped with a tarp or net to secure loose materials during transport to the disposal facility or site. The tarp/net will not exceed the truck body/trailer measurements.

LOAD/HAUL CREWS

SDR and Subcontract Load/Haul Equipment Committed

w/in Region	Reach Back
18 Grapple Trucks	248 Grapple Trucks
49 Trailers	110 Trailers
15 Loaders	58 Loaders

Truck Measurements and Signage – Trucks will be measured accurately and identifying data will be fully documented. The inspection/measuring will be performed by City and SDR representatives, documented, and signed-off by the jurisdiction. The dimensions will be the inside measurements of the trailer. The truck specifications will be on file with the jurisdiction. Signage and vehicle numbers will be prepared and ready prior to deployment. SDR identification placards will be affixed to the sides of each piece of heavy equipment and trucks.

Hours of Operation – Debris removal operations that generate excessive noise levels will take place during daylight hours, seven days a week. Adjustments to the hours of operation, based on working conditions and scope of work, may require a coordinated change with the approval of the City's designated official.

SUBCONTRACTING PRACTICES AND PROCEDURE

- ✓ As per our written *Subcontractor Protocol*, we often use subcontractors to ensure our resources are sufficient to complete operations efficiently for prompt emergency debris removal and restoration operations. We have an extensive pool of dependable subcontractors that can mobilize immediately upon notification. SDR ensures: Our subcontractors are fully vetted as to insurance, safety procedures, experience, pricing, and resources.
- ✓ We will pursue local and MBE/WBE/DBE as it is economically feasible to do so.

STRATEGY TO RETAIN RESOURCES

Our disaster experience has proven that subcontractors remain on the project and maintain high production levels as long as they are properly incentivized.

- ✓ **On the Positive Incentive Side**
  - **SDR pays subcontractors weekly**
  - **Production incentives associated with Sector assignments**
  - **SDR pays a wage where a crew can make a living**
- ✓ **On the Negative Incentive Side**
  - **By contract, leaving a project without completion and/or a release results in retainage being held.**
  - **Poor production, safety or quality performance results in less desirable sector assignment**

TEMPORARY DEBRIS MANAGEMENT SITE SET-UP AND OPERATION

1. General

Southern Disaster Recovery (SDR) will provide all management, equipment, operators, and laborers required for the establishment, operation, and maintenance to accept, process, reduce, incinerate, and dispose of disaster related debris. These Temporary Debris Management Sites (TDMSs) may utilize air curtain incineration and/or mechanical chipping/grinding to reduce vegetative and clean woody debris. The TDMSs may also be used as transfer points for depositing mixed Construction and Demolition (C&D) debris prior to reloading for final transport to an authorized landfill. SDR will manage the TDMSs to accept debris collected under other contracts.
Site selection will be done by the Contracting Authority at its own cost.

2. Site Operations Plan

Following identification by the contracting authority of the TDMSs, SDR will develop a Site Operations Plan for each site.

The plan will address the following:

- ✓ Site management, to include point-of-contact and organizational chart
- ✓ Site ingress and egress
- ✓ Site preparation, including clearing, erosion control, and grading
- ✓ Traffic control procedures
- ✓ Site security
- ✓ Site safety
- ✓ Site layout/segregation plan, to include: air curtain incineration areas, mechanical chipping/grinding areas, ash storage or disposal areas, hazardous waste containment area, contractor work area, inspection tower, and safety zone clearance areas (100-foot clearance area between stockpiled debris and incineration operations, and 1000-foot clearance area from structures)
- ✓ Environmental mitigation plan, including considerations for smoke, dust, noise, traffic, safety buffer zones, storm water runoff, historic preservation, wetlands, and endangered species as appropriate

TEMPORARY DEBRIS MANAGEMENT

SDR and Subcontract TDMS Equipment Committed

w/in Region	Reach Back
20 Grinders	34 Grinders
34 Trackhoes/Excavators	50 Trackhoes/Excavators
16 Dozers	29 Dozers

3. TDMS Foreman - Day/Night Operations

SDR will provide site foremen for both day and night operations, who will be responsible for all oversight, including traffic control, dumping operations, segregation of debris, incineration and mechanical grinding operations, and site safety.

Both foremen will be responsible for monitoring and documenting all equipment and labor utilized on the site. This information will be compiled with other daily reporting data and will be provided to the contracting authority by the Debris Operations Manager.

If multiple TDMSs are in operation, SDR will assign a site manager for all necessary oversight.

4. Site Assessment

Immediately upon taking occupancy of any site, SDR will conduct an initial site assessment to determine baseline conditions. This assessment will include visual inspection in the presence of a Contracting Authority representative, documentation of any existing improvements to or on the site, aerial and/or ground photography/videography, random soil samples, water samples from any existing wells located on the site, and review for any volatile organic compounds.

Spot soil samples will be taken at the areas considered for the temporary storage of household hazardous waste, ash, and fuel.

Photographs and/or GPS based maps of the site will be updated as the use and configuration of the site changes.

5. Site Design

The sites will be designed so that air curtain incinerators are located a minimum of 1,000 feet from the nearest occupied building or as specified by the applicable state or local environmental regulatory entity. The area within 50 feet of the burn pits will be cleared of vegetative cover to reduce fire hazard. If pit burning is utilized, and the pit is situated on pervious soils, an impervious layer of clay, limestone, or synthetic material will be provided.

Vegetative debris will be centrally stored near the air curtain incinerators, but at a minimum of 100 feet away from the air curtain incinerators to reduce potential fire hazard. Roads should be designed with separate ingress and egress, where possible, to expedite truck flow in and out of the site. If possible, large turnaround areas will be constructed to enable simultaneous movement of multiple trucks.

To reduce hazards from flying debris, wood chipping operations will be located a minimum of 250 feet from all areas where personnel are actively working.

If needed, access roads will be constructed at each site. Crushed rock or gravel will be used to form a base that will prevent soil erosion, reduce dust generation, and provide truck access during inclement weather. Additional applications of rock may be necessary for road maintenance as theproject progresses. Additional reserves of rock should be maintained on site road to repair and rebuild roads for road relocation, mud accumulation, and compression of rock as a result of heavy truck traffic.

6. Site Preparation

SDR will be responsible for preparing the TDMSs to accept debris. This preparation may include clearing, erosion control, grading, constructing and maintaining haul roads, entrances, dumping pads, equipment washing areas, and burn pits. SDR will provide utility clearance and sanitary facilities, if needed. SDR will protect existing structures at the site(s) and repair any damage caused by our operations at no additional cost to the City.

7. Site Security

SDR will provide and maintain site security measures for all operations conducted at the TDMSs.

8. Inspection Towers

SDR will construct and maintain one Inspection Tower at each TDMS site. SDR and the City personnel will conduct inspections, load volume estimations, and photograph each load of debris delivered to the site from the tower. Existing structures serving this purpose may be utilized following coordination between SDR and the City. Tower locations may be changed to support the progression of debris storage and reduction as well as normal traffic patterns on the site.

The towers may be constructed using pressure treated wood or metal scaffolding materials. The floor elevation of the tower will be such that it affords the City representative(s) and SDR personnel a complete view of the load bed of each piece of equipment that hauls debris to the site while allowing for the easy transfer of the debris removal load ticket between the City representative and the vehicle driver. The floor area will be a minimum of 8' x 8'. A 4' high wall, sturdily fastened to the structure to eliminate fall hazards, will protect the perimeter of the floor area. A roof will be constructed over the floor area, constructed to provide a minimum of 6'-6" of headroom. Steps with a handrail will provide access to the Inspection Tower.

To prevent falls, all personnel on the tower must be “tied-off” to the tower at all times.

9. Debris Unloading and Segregation

Trucks containing any waste other than vegetative debris will be directed through the disposal site to the C&D debris area of the disposal site.

Trucks insufficiently loaded will be noted and reported. Photos and live video may be utilized to record actual hauling equipment.

Trucks containing vegetative debris will be directed to the debris depository areas of the sites in an orderly manner via the ingress. Upon obtaining clearance from the designated flag person at the depository area, the trucks will back up, dump their load, and exit the site via the egress.

Once the debris has been deposited at the base of the debris storage pile, dozers and track hoes will be used to move and pile the debris. Debris piles will be compacted and constructed with a slope to prevent loose debris from rolling or falling down the sides of the piles.

When feasible, maximum effort will be made to salvage and/or recycle debris.

Only vegetative debris will be brought to the air curtain incinerator section of the disposal site. All non-vegetative debris will be segregated according to its type. Debris sorting will be done when it is picked up for transport to the burning pits. The vegetative waste at each site will be segregated into three basic categories: stumps, logs, and brush.

10. Debris Incineration

Debris eligible for incineration will be moved to the air curtain incinerator by a front-end loader. The air curtain incinerator will be loaded using a trackhoe. Burning will continue until the box/pit is approximately 1/3 full of ash. At that point, any large, partially burned logs will be removed and placed on an earthen area near the box/pit. After the ash has cooled, it will be removed and placed in an adjacent storage area. The storage area will be bermed or diked to prevent ash from being transported from the pit by storm water runoff during a rainfall event.

11. Debris Chipping

Tub grinders will be set up at each disposal site to convert some of the debris into wood chips suitable for use as mulch or fuel chips. A knuckleboom loader or trackhoe will be used to load debris into the grinder. The grinders will be primarily used for debris with high soil content such as stumps, which are not suitable for incineration. Due to the noise generated by the grinders and the hazard of debris being ejected from the tub, the grinders will be set up at least 150 to 200 feet from all other work areas. The 200-foot boundary will be marked by physical barriers, caution tape, and have appropriate signage.

A dozer should be used to stockpile mulch as it is processed by the grinders. Large amounts of processed debris will produce large mulch piles. Consideration should be given to the amount of material that will be chipped and adequate space should be allotted for stockpiled mulch. The piles should be at least 50 feet away from the grinder.

The temperature of the stockpiled mulch should be monitored to prevent spontaneous combustion. If the temperature approaches or exceeds 150 degrees Fahrenheit, the stockpile should be rolled to release the heat buildup. The environmental monitors will record the temperatures of all debris piles on a periodic basis.

12. Fire Protection

SDR will manage all site operations to minimize the risk of uncontrolled/uncontained fire. Twenty-pound all-purpose fire extinguishers should be strategically stationed around the incinerators/burn pits and specifically around the debris piles with the heaviest concentration of debris. The number of fire extinguishers will vary depending on the size of the TDMSs. At no time should a fire extinguisher be located further than a 1-minute round-trip walking distance from any point on the site. Site conditions may necessitate having additional water-filled extinguishers and readily available hand tools, such as fire rakes.

13. Ash Containment Area

SDR will contain, store, and remove ash from all incineration operations. The ash containment area will be wet down periodically for the duration of operations to prevent particles from becoming airborne.

14. Household Hazardous Waste Containment

SDR will construct a containment area at each TDMS for any hazardous waste inadvertently delivered to the site. The containment area will be a minimum of 30" x 30". The perimeter of the containment area will be constructed with an earthen berm or hay/straw bales that are staked in place. The area will be lined with a heavy gage, non-permeable plastic to provide a waterproof barrier. Additional heavy gage, non-permeable plastic sufficient in size to cover the entire containment area will be kept on site and used to prevent rain from entering the containment area. To direct run-off away from the protected area, the site will be sloped appropriately to provide necessary grading.

15. Site Closure

SDR will close each TDMS within 30 calendar days of completing the reduction or transfer all delivered debris to an authorized landfill. Site closure will include removing site equipment, debris, and all remnants

from the processing operation; grading the site; and, restoring the site to pre-occupancy conditions. The site(s) will be restored in accordance with all state, tribal, and local requirements.

SDR will be responsible for the proper disposal of non-burnable debris, ash, wood chips, and hazardous and toxic wastes.

SDR will conduct a final inspection of the site along with the City representative to receive final approval of the site closure.

DEBRIS COLLECTION AND TRANSPORTATION

Removal Activities – From the grid/zone assignments, areas are categorized by priority and accessibility. The zones will be equitably established to ensure timely progression throughout the affected area. A "clean as you go" process will be implemented for the waste stream being worked, with crews working from street to street through each zone. Crews and resources will be adjusted as needed during this phase.

Debris Segregation – Initial storm/event debris will be separated when feasible.

- Crews will attempt to segregate materials, where feasible, into constituent piles for collection and disposal. Hazardous materials will be segregated and properly stored for future collection.
- Mixed debris will be collected as C&D.

Debris collection passes will continue up to the point where the remaining debris consists of light litter that can be easily collected using raking and sweeping methods of operation.

FINAL DISPOSAL OF DEBRIS AND DEBRIS BY-PRODUCTS

Disposal of all eligible debris, reduced debris, ash residue, and other products of debris management will be in accordance with all applicable state, federal, and local laws. Associated related costs will be "pass-through" with no additional charges to the City. SDR will ensure disposed debris is properly documented in accordance with FEMA protocol by using approved collection/disposal and tipping tickets. Activities will be done in coordination with the City's Debris Manager.

DISPOSAL/RECYCLING HAULING

SDR and Subcontract Disposal/Recycling Trucks Committed

w/in Region	Reach Back
18 Trackhoes	38 Trackhoes
49 Trailers	110 Trailers

REMOVAL OF LEANERS, HANGERS, AND STUMPS

SDR will ensure the location and removal of all approved leaners, hangers, and stumps is properly documented as per FEMA. Any holes remaining after stump removal will be backfilled appropriately.

HOUSEHOLD HAZARDOUS WASTE (HHW) REMOVAL, TRANSPORT, AND DISPOSAL

HHW removal will be organized as a unique, separate mission from the debris removal passes. The equipment and specialized training (HAZWOPER training) combine to make this a unique debris removal operation. Consistent with the level of damage from the disaster, an initial pass may be conducted by HAZWOPER qualified personnel to visually inspect disaster debris piles and take action to segregate the HHW from woody, vegetative and C&D material. At a later date, coordinated with the City, specially trained crews will move the hazard area to remove the HHW. In heavily damaged areas with a significant amount of HHW, the HHW may be placed in a temporary containment cell constructed at a properly permitted TDMS. Otherwise HHW will be taken directly to a proper disposal location.

ABANDONED VEHICLE REMOVAL

Abandoned vehicle removal will be a unique, separate mission from the debris removal passes. The City will identify abandoned vehicles to be removed, SDR removes the vehicles and takes them to a City identified location.

ANIMAL CARCASS REMOVAL AND DISPOSAL

As identified by the City, animal carcasses will be removed and transported to a properly permitted disposal location.

ROW WHITE GOODS DEBRIS REMOVAL

A separate debris mission will be organized to remove White Goods in the disaster areas. The removal of white goods will take place using a flat deck, stake body truck with an equipment lift gate. All loading of White Goods will be done manually so as not to disturb any Freon containing lines. Each White Good will be evaluated for its use of freon. Those white goods without freon may be hauled directly to final disposal or recycler. White goods with freon will require the work of a freon technician to remove the ozone depleting gas.

FREON REMOVAL

A Section 608 certified technician will maintain, repair or dispose of equipment that could release ozone depleting refrigerants into the air.

DEMOLITION, REMOVAL, AND DISPOSAL OF DAMAGED OR CONDEMNED STRUCTURES

As required and directed by City officials, demolition and removal of condemned structures and buildings resulting from the disaster, will be performed by SDR to reduce or eliminate an immediate threat to life or enhance safety and health to the public. Each demolition will have a site inspection report (including a site plan), right-of-entry agreement, and proper permits. Demolition, removal and disposal of damaged or condemned structures will be considered a special mission within the daily action plan and will unique heavy equipment resources and qualified personnel to complete the mission.

DOCUMENTATION AND RECOVERY PROCESS

SDR's Project Manager and Site Superintendents have complete responsibility for quality assurance/quality control (QA/QC) of work performed by SDR and all subcontractors. As with any project, effective QA/QC starts with initial identification of project roles, which is a key element to our standard QA/QC program. Further, oversight and support will be provided from three levels within our organization, including SDR's Principal-In-Charge, Project Manager, and Site Superintendents. The cornerstone of our approach is the assignment of a strong Project Manager capable of integrating each sub-discipline required as part of this project. The Project Manager will have first-line responsibility for performance. Continuity of tasks will be maintained by the Project Manager's oversight of and participation in all contract activities.

By the close of business each day of the contract, the Project Manager will submit a report with the following to the Contracting Officer:

- Contract number
- Daily and cumulative hours for each piece of equipment and personnel
- By unit cost or daily and cumulative CY removed

SDR will reconcile all units of work daily, thereby reducing the occurrence of erroneous or disputed data later in the project, and commits to the following:

- Maintenance of recovery process documents
- Preparation of written and oral status reports as requested by the City

- Assistance with claim document preparation as required by the FEMA Public Assistance Program for submittal to the state and the FEMA Public Assistance program

DEBRIS TAKEN TO LANDFILL

Should it be more cost effective to transport the eligible debris directly to a permitted landfill for disposal, field procedures will be implemented to ensure that each load ticket prepared at the loading area is properly manifested to the landfill for proper confirmation of truck capacity and disposal information.

REDUCED DEBRIS/FINAL HAUL OUT TO DISPOSAL FACILITY

The same procedure listed above will be implemented for debris taken to a TDMS. However, during the final haul out, a separate ticket will be issued for the reduced debris hauled to the final disposal site. Documentation will include haul out time, cubic yards, disposal location and time.

INCIDENT ACTION PLAN

The Incident Action Plan (much like a daily work plan) is the process by which the Debris Management Team (City, Contractor and Debris Monitor) agree to the objectives for the next operational period (day or next series of days); and, by which the rest of the SDR Incident Management Team ensures the Project Manager has the resources to accomplish the objectives.

DOCUMENTING AND REPORTING DAMAGE

SDR's ***Customer Service Plan*** is a tiered system consisting of:

Tier 1: Conduct business in a manner that is professional, ethical, and sensitive to the area in which we work, to prevent damage, and to facilitate positive interactions with the public. Should any damage to property or detrimental public interaction occur, our personnel are trained to solve problems speedily to the mutual satisfaction of all parties involved, including the immediate repair of property if necessary.
Tier 2: Adds the inclusion of the Project Manager's in the problem-solving process. Also, any customer service issues, including damage and repairs, are added to the daily situation report, so the entire operation may learn from the activities.
Tier 3: At this level, any issues identified by the City are addressed. The City may have an ongoing citizen complaint system that properly identifies issues and tracks them to resolution. SDR command staff ensures the complaint is included as an action item within the daily Incident Action Plan (IAP) development. All necessary personnel will be apprised of any action items ensure speedy and complete resolution.

INVOICING AND DATA MANAGEMENT

All our processes and procedures are designed to ensure each project is carried in such a way that the City's federal reimbursement is maximized.

Key elements of our systems include:

- Proper certification of haul vehicles with City signatures and approvals
- Proper field documentation of each load hauled by identifying the precise/certified vehicle, the driver, and location of eligible debris removed
- Proper field documentation of each disposed or reduced load, including disposal location and the safe, permitted operation of that disposal or reduction site location
- Daily reports, which may also include the updated loads-hauled database (if available), to ensure ongoing transparency and communication of work outcomes
- Reports and databases that are fully supported by accurate field documentation

Our project management documentation process also provides for positive identification and control of work on FHWA and other federal aid eligible roads.

The client may choose to utilize the SDR Disaster Recovery Load Ticket to record the debris collected and transported from the rights-of-way to the designated disposal sites. SDR captures 15 key data points described in FEMA's Debris Management Guide. The six-part load ticket allows project participants to accurately maintain documentation of billable activities.

At a minimum, the load tickets used will be posted to a weekly spreadsheet and/or database with both a hard copy and electronic version provided to the client. The following ticket information is included in the database:

- Date
- Preprinted ticket number
- Hauler's name
- Truck number and truck capacity in cubic yards
- Total load percentage, as assigned by the client representative in the tower
- Load amount in billable cubic yards
- Debris classification as burnable, non-burnable, mixed, or other
- Point of origin for debris collection, time loaded and unloaded, including location of the temporary disposal site

Since the load ticket data is the basis for invoicing, SDR works with the City's monitoring firm to ensure all data is complete and accurate.

TECHNICAL SUPPORT FOR REIMBURSEMENT

In addition to utilizing the industry's best practices for debris removal documentation, SDR will provide comprehensive Public Assistance technical support for reimbursement. SDR's Disaster Recovery Services Director will coordinate and set up all necessary meetings. SDR will meet with the City to review and update the information required for FEMA reimbursement submittals as well as assist with item checklists required for each FEMA category.

SDR's Program Assistance includes:

- Coordination with the City for their submission of the official request for state assistance and FEMA inspection.
- Review of the FEMA Project Worksheet (PW) for accurate scope of work and unit costs.
- Recovery process documentation, including creating a process to capture the daily log and tickets from the field/contractor and data entry of the recovery process. (Perform daily, weekly ticket reconciliation, and final reconciliation of debris removal ticket ledgers and disposal ledgers (TDMS to final disposal), per FEMA requirements. Provide FEMA Category A submittals including final inspection reports.)
- Review project documentation for consistency, compliance, and completeness. Assist with submission of requests for payment, if needed.
- Make recommendations to City representatives for reimbursement tasks.
- Assist the City in negotiations with federal and state agencies and verify completion of work task items for FEMA Category A-B for contract closeout.

PUBLIC NOTICES

SDR will work with City public information efforts to inform residents about disaster recovery, debris management tasks, and how residents can participate in the community's debris management and the expectations for the upcoming period.

SDR will participate in any established joint information center and provide materials and information to ensure the public is aware of debris clearance disaster recovery endeavors.

SDR can provide weekly public notices of the debris removal schedule to keep those affected by the processes informed. All public notices shall be approved by the City prior to release and will contain a description of the proposed work and how debris should be placed in the right-of-way for removal as well as a description of eligible debris and the schedule for removal.

Specific information will include:

- Cleanup instructions
- Status of cleanup
- Locations of drop-off or collection sites
- How to source separate
- Projected cleanup locations for the coming week

SDR will participate with the City with any other public information efforts including providing information for a telephone hotline and/or a flyer to hand out or to be inserted into utility bills/mailouts.

Consistent with the City's desires, available information will include recycling/diversion programs for the disaster debris such as point of collection, hours, materials to be collected, method of collection (drop-off, curbside, bins, etc.).

Statements for Disaster Debris Information:

The following written statements are given as examples of what we can provide to assist entities with disseminating information to their constituents and are designed to be modified as needed. They may be used in flyers, newspaper articles, or read over television and/or radio. The statements are intended to fit into an overall public information strategy and may be used in conjunction with other messages about the disaster recovery process.

PERSONAL SAFETY STATEMENTS

EVERYONE INVOLVED IN DEBRIS CLEAN-UP IS ENCOURAGED TO WEAR PROPER CLOTHING AND RESPIRATORY PROTECTION*. Protect yourself with gloves, hard-soled shoes or boots, and respiratory masks as necessary. If you have a cut or a scratch that is not healing properly, seek immediate medical attention.*

POWER EQUIPMENT CAN BE DANGEROUS. *If you are not familiar with or haven't operated power equipment such as chain saws or grinders, consider hiring a licensed, qualified contractor to assist you.*

STAY AWAY FROM UTILITY AND DEBRIS CREWS WORKING IN YOUR AREA. *All utility and debris crews working for the City are licensed and qualified for the work they are performing. They maintain safety programs to reduce the occurrence of injuries in their work locations. However, you must stay clear of utility and debris crew operations because of the inherent dangers in operating heavy equipment.*

DEBRIS REMOVAL INSTRUCTIONS

HELP SPEED UP DEBRIS REMOVAL *by placing debris in the right of way.*

Follow these key steps:

- *Keep debris at least three feet from electrical utility poles and boxes, fire hydrants, and water and gas meters.*
- *Separate woody (limbs and leaves) debris; construction and demolition debris and household hazardous waste into separate piles.*
- *Garbage pickup will resume on your regular schedule on _____. Separate garbage from your disaster debris*
- *Call _____ with debris removal questions at _____.*
- *Debris removal will be ending soon, so residents are encouraged to take advantage of the free removal service.*

DISASTER DEBRIS THAT WILL BE PICKED UP

- *Woody, vegetative debris: Limb and leaf debris created by the storm event.*
- *Construction and demolition (C&D) debris: Debris such as 2X4's, dry wall, shingles, paneling, insulation, etc. that was created by the storm event. Do not place C&D debris at the roadside if your insurance company pays for a contractor to clear your C&D debris from your home.*
- *White goods: appliances and other household devices that were damaged/destroyed by the storm event.*
- *Household hazardous waste: Material that includes such things as paint, fuels, insecticides, pesticides, sprays with petroleum distillates, etc. These will only be picked up if they are associated with damage from the storm event.*

Each of these will need to be separate from the other at the roadside. Some of the materials will be processed for recycling and some of these materials will go to immediate disposal. Your assistance is necessary for debris clearance to progress rapidly and correctly.

ASSISTANCE WITH PRIVATE PROPERTY DEBRIS REMOVAL

Anyone who needs assistance with debris removal, such as senior citizens, and those that need help with activities of daily living may call _____ to schedule a volunteer to assess your needs. Assistance will be provided by volunteer groups working in our area and will be prioritized for those that do not have insurance coverage to pay for the cleanup.

FIRST/SECOND/THIRD PASS NOTICE

The City's contractor will be in _____ (add in neighborhoods or street designations) for a (first/second/third) pass at picking up disaster debris from the road right of way. Only eligible debris will be picked up.

NOTE:

City should insert the appropriate debris and/or safety statements above to assist residents and business owners with the safe and efficient removal of debris.

EQUIPMENT LIST

Company Name	Equipment Type/Name	OwnedLeased Sub	SOW Mission
SDR	Self Loader Debris Truck - **150 CY (Truck/Tandem)-Qty 9**	Leased	Load/Haul, Parks, PPDR

CONTRACTOR QUALITY CONTROL PLAN

Our CQCP addresses contractor monitoring and control as it relates to debris removal, reduction, and disposal operations, including work done by subcontractors. The CQCP is comprised of the detailed procedures and organization required to ensure the performance of all debris recovery and removal processes complies with the contract requirements. The CQCP encompasses both on-site and off-site operations. Ultimately, our Operation Manager and Site Superintendents are solely responsible for quality control of the work performed by the project team and all subcontractors.

Our CQCP Plan consists of the following individuals, procedures and responsibilities:

CQC System Manager

- Reports directly to the Incident Executive.
- Has authority to stop work for non-compliance with the contract.
- Coordinates all potential QC issues with the Operations Chief.
- Coordinates with Plans Chief as required.
- Coordinates with the Safety Officer as required.
- Resolves technical or operational issues with the ADMS system.

CQC Area Manager

- Reports directly to the CQC System Manager.
- Reports contract non-compliance issues to the CQC Area Manager.
- Resolves CQC issues identified throughout the area of operations.
- Has authority to stop work for safety violations.

CQC Sector Manager

- Reports contract non-compliance issues to the CQC Area Manager.
- Resolves CQC identified operational issues.
- Has authority to stop work for safety violations.
- Provides oversight of the TDMS/Disposal Site Ticket Manager

CQC Site Manager

- Reports directly to the CQC Area Manager.
- Reports directly to the CQC Sector Manager.
- Reports contract non-compliance issues to the CQC Sector Manager.
- Resolves CQC loading site issues.
- Has authority to stop work for safety violations.
- Provides oversight of the load site Ticket Manager.

Paper-Load Ticket Process

Should there be a time delay with implementing the Automated Debris Management System (ADMS), Southern Disaster Recovery (SDR) will provide and utilize paper load tickets as needed. Our CQC team will also oversee this process, which will be as follows:

- ✓ The load tickets will be a minimum four-part form used for recording the cubic yard volume of debris removed for disposal. Debris Load Tickets will be sequentially numbered and will be issued by the SDR CQC team at the debris loading sites.

- ✓ The Monitoring team is responsible for filling out all the information through the “LOADING” section of these tickets at the debris loading site prior to giving the four-part load ticket to the truck driver and releasing them from the loading site.

- ✓ The Monitoring team will fill in the remaining information at the “DROP-OFF” location, where they will verify the hauler and equipment and establish a percentage of truck capacity, or actual cubic yards, of the eligible cubic yardage of debris load at the reduction or disposal site. If documenting percentage, the Monitor will calculate the actual cubic yardage of the load. The actual cubic yards will be recorded on the load ticket by the Monitor to the nearest cubic yard and document the data on the load ticket.

- ✓ The Monitoring team will maintain the original copy of every load ticket. One copy will be given to the truck driver, one copy is for the prime contractor, and one copy for the landfill operator.

- ✓ All paper load tickets will be transferred to the Automated Debris Management System (ADMS) once it is brought online.

TRAINING PHILOSOPHY & COURSE OUTLINE

Training is an integral component of disaster preparedness and readiness, both for entities which may experience the results of the disaster, and for the companies who will respond to assist entities in the aftermath.

Southern Disaster Recovery (SDR) takes pride in the quality of services we provide and the requirements we have for those working under our purview. SDR can support our clients by providing the following training to augment their ongoing emergency management and disaster readiness program. We believe that joint training increases the effectiveness we have as a team during a disaster.

To ensure our employees and entities are fully educated and prepared, SDR assures the following criteria:

Facilitate Courses

IS – 631 – FEMA Public Assistance Program
IS - 632 – FEMA Intro to Debris Operations in the PA program
IS - 100 – Introduction to the Incident Command System
IS - 200 – Basic Incident Command System
IS - 700 – National Incident Management System
IS - 800 – National Response Plan

Teach[1]

I-300 – FEMA Intermediate Incident Command System
I-400 – FEMA Advanced Incident Command System
G775 – EOC Management and Operations
Debris Monitoring – independent course for field monitoring and audit

4.1 TRAINING OUTLINE[2] FOR SDR EMPLOYEES

Table 8: Training Summary

Training Summary			
Course #	**Course Name**	**Method of Delivery**	**Who Should Take It**
I-700	National Incident Management System	Internet/proctored locally	Supervisors and above
IS-800	National Response Plan	Internet/proctored locally	Supervisors and above
IS-100 IS-200	Incident Command System Intro Basic Incident Command System	Internet/proctored locally	Supervisors and above
I-300	Intermediate ICS	Classroom/delivered locally	Elective/managers
I-400	Advanced ICS	Classroom/delivered locally	Elective/managers
IS-630	Intro to PA Process	Internet	Accounting

[1] ICS and EOC courses taught by qualified instructor to FEMA standards
[2] Training outline excerpted from SDR Disaster Debris Removal Procedures

IS-631	PA Operations	Internet	Accounting
IS-632	Intro to Debris Operations in the PA Program	Internet/proctored locally	Supervisors and above
CQC[3]	Debris Quality Control Training (in-house developed)	Classroom/Field expedient	All
USACE CQC	US Army Corps of Engineers Contractor Quality Control Training	Classroom	Project Managers
OSHA Disaster Worker	OSHA Disaster Worker	Classroom	Managers and Supervisors
Command Center	Command Center	Classroom/Field expedient	All working in Command Center

4.2 DEBRIS OPERATIONS QUALITY CONTROL PROGRAM TRAINING OUTLINE

SDR Disaster Debris Removal Procedures Overview
Quality Control Chain of Command
Debris Eligibility
Non-compliance issues
Ethics
Stewardship of Tax Dollars
Professionalism
QC Site Manager Training
Debris loading
Segregation
Reduction
Disposal sites
Household hazardous waste orientation
HTRW (Hazardous, Toxic and Radiological Waste)

4.3 FIELD OFFICE AND CONTRACT INITIATION TRAINING

Field Office “Go” Boxes
Forms
References
Contract information
Subcontract management
Project Kick off Meeting with Owner
Debris Clearance documentation
TDMS Permits
Truck Certification documentation
Safety Orientation(s)
Debris Removal Documentation

[3] CQC – CONTRACTOR QUALITY CONTROL

4.4 DEBRIS ELIGIBILITY TRAINING MODULE[4]

General

For debris removal to be eligible, the work must be necessary to:

- Eliminate immediate threats of significant damage to improved public or private property
- Ensure the economic recovery of the affected community to the benefit of the community at large
- Mitigate the risk to life and property by removing substantially damaged structures and associated appurtenances as needed to convert property acquired through a FEMA hazard mitigation program to uses compatible with open space, recreation and wetlands management practices.

Examples include:

- Debris removal from a street or highway to allow safe passage of emergency vehicles.
- Debris removal from public property to eliminate health and safety hazards.

Eligibility[5]

Public Assistance funds are available to eligible applicants for debris clearance, removal and disposal operations. Eligible applicants include State and local governments, Indian tribes, and certain private nonprofit organizations. In order to be eligible for FEMA funding, the debris removal work must:

- Be a direct result of a Presidentially declared disaster;
- Occur within the designated disaster area; and
- Be the responsibility of the applicant at the time of the disaster.

In addition, at least one of the following must apply:

- Removal eliminates immediate threats to human lives, public health and safety;
- Removal eliminates immediate threats of significant damage to improved public and private property; and/or
- Removal ensures economic recovery of the affected areas to the benefit of the community-at-large.

Debris located on public property and rights-of-way is eligible. Eligible debris can include downed trees, sand, building wreckage, and damaged personal property.

Generally, debris removal from private property is not eligible under the Public Assistance Program; however, FEMA may approve debris removal from private property on a case-by-case basis when extenuating circumstances exist. Applicants should contact their State Emergency Management officials prior to debris removal for specific eligibility requirements. Debris that threatens private homes may be eligible under FEMA's Individual Assistance Program.

[5] FEMA Report 327; PAPPG

Emergency Phase Restoration of Access

Our contract with a client may include restoring access to privately owned driveway, road or bridge. This type of work is eligible for the client's reimbursement under the FEMA Public Assistance program in the emergency phase. When this is eligible, this will be briefed as a part of the Incident Action Plan and daily briefing.

4.5 Ethics Training Module[6]

As an employee, you are a direct representative of Southern Disaster Recovery. If you are a sub-contractor, you are a representative of not only your company, but of SDR as well. All personnel performing work on the job are, by extension, representatives of our client. Our company's reputation is important. Your individual ethics and conduct impact our reputation and service to our client. Your decisions matter.

We all are interested in performing the highest quality job possible and preserving the reputation of our client and our company. We all will work to avoid even the appearance of impropriety.

Characteristics of Ethical Conduct

- Work performed should be to the highest craftsmanship possible
- All safety issues are immediately reported to a supervisor
- All real or perceived violations of our company's procedures or policies are immediately reported to a supervisor.
- All real or perceived violations of our contracts are immediately reported to a supervisor.
- Supervisors will identify the issues and work to resolve any violations of our company's procedures, policies or contracts.
- Our Customer Service Plan outlined in the SDR Disaster Procedures is followed.
- Accept no gifts or other like service for work performed outside procedures, policies, contracts or the daily Incident Action Plan
- Make no commitments outside of that the company cannot fulfill. Procedures, policies, contracts and the daily IAPs are guides to our commitments.
- When in doubt, seek advice of a supervisor; if not resolved the Quality Control Manager or Deputy Quality Control Manager should be consulted.

You are expected to seek advice regarding this standard. A duty to report under this standard does not absolve an individual or organization the duty to report under other federal, state or local laws.

SDR EMPLOYEE ACKNOWLEDGEMENT

As an employee of Southern Disaster Recovery (SDR), I agree to adhere to the training received regarding disaster response and debris recovery and removal and ethical conduct.

I acknowledge this ethics training and agree to perform to the standards described herein.

Disaster Debris

2024-2025 HURRICANE HELENE PROJECT

CLIENT / OWNER

SIMULTANEOUS CONTRACTS WITHIN FOUR STATES（SC, NC, GA, FL AND 35 INDEPENDENT POLITICAL JURISDICTIONS

VALUE

Collected 9,400,000 cubic yards

PROJECT FEATURES

Right of Way Debris Collection
Waterway Debris Removal
Private Property Debris Removal (PPDR)

COMPLETION

2024-2025

PROJECT DESCRIPTION

Right of Way (ROW) Debris Collection

- Collected 9,400,000 cubic yards of debris within 35 jurisdictions.
- Operated within FEMA Public Assistance guidelines.
- Utilized over 530 collection crews.
- Managed 94 Debris Management Sites (DMS).
- Implemented multiple debris processing methods, including air curtain incineration, grinding and mulching, double grinding for horticultural reuse, and conversion into fuel for power plants.
- Employed specialized equipment (Sennebogens) for hazardous tree and limb removal in mountainous terrain in Western North Carolina.
- Removed misplaced sand, silt, and dirt deposits.
- Ensured weekly subcontractor payments, with a payroll exceeding $5 million.
- Executed extensive traffic control (MOT) techniques on high-traffic roadways and challenging mountainous terrain.
- Held weekly status meetings with FEMA and State Emergency Management personnel.

Waterway Debris Removal

- Conducted debris removal across 11 jurisdictions in North Carolina and Georgia.
- Utilized drone technology for FEMA and EHP permitting and the production of programmatic surveys.
- Obtained and managed (ROEs) rights of entry for property adjoining the waterways.
- Deployed specialized equipment, including Sennebogens, skidders, marine equipment, and low-impact mini excavators, particularly in mountainous areas.
- Cleared debris from over 1,200 miles of stream banks, tributaries, and major rivers.
- Managed debris categories including vegetative, construction and demolition materials, vehicles, vessels, and hazardous household waste.
- Operated over 50 DMS (debris management sites) dedicated to waterway debris removal.

Private Property Debris Removal (PPDR)

- Provided PPDR services to several thousand homes across multiple jurisdictions in Western North Carolina.
- Assisted residents unable to move debris from private property to the public ROW by securing Rights of Entry (ROE) agreements.
- Ensured indemnification for local, state, and federal governmental agencies through homeowner agreements.
- Conducted initial property surveys to outline work scope, property boundaries, utility locations, and sewer outlets.
- Utilized low-impact specialized equipment to minimize property damage.

Safety Management

- Led by an experienced safety professional, SDR maintained a rigorous safety agenda.
- Conducted detailed Job Safety Analyses (JSA) before each assignment to assess and mitigate risks.
- Developed specific safety policies and procedures pertaining to removal of tree debris impacting homes and structures.
- Promoted total team involvement with safety as the primary operational priority.

Financing, Bonding, and Management

- Maintained consistent weekly payments to subcontractors despite unpredictable payment schedules from contracting jurisdictions.
- Managed a weekly subcontractor payroll exceeding $5 million.
- Ensured robust cash management strategies.
- Provided 100% Payment and Performance bonding for the estimated contract value.
- Never failed to meet financial obligations, including timely payments to subcontractors and employees.

Contract Summary

- SDR successfully executed large-scale debris management across four states and 35 independent jurisdictions.
- The project encompassed ROW debris collection, waterway debris removal, and private property debris removal.
- Utilized cutting-edge technology and specialized equipment to ensure efficiency and compliance with FEMA guidelines.
- Prioritized safety, financial integrity, and operational excellence throughout the project.
- Delivered results with unwavering commitment to subcontractor support and environmental stewardship

KEY STAFF ASSIGNED TO PROJECT

Alvie McClaran-Project Manager
Sonny Sims – Project manager

PROJECT DESCRIPTION

Hurricane Ian made landfall in Southwest Florida producing catastrophic storm surge and wind damage in Lee and Charlotte County, Florida.

SDR was awarded an emergency contract by the State of Florida (Division of Emergency Management) to conduct Private Property Debris Removal in North Fort Myers and the City of Cape Coral. The scope of work entailed woody, vegetative material; construction & demolition material; vessels and other titled property; household hazardous wastes, white goods and structure demolitions.

SDR had approximately 520 properties with completed Rights of Entry agreements to assess, develop debris management strategies and remove the debris.

The operation necessitated the removal of 35 Vessels that were “upland”; many of which were perched on lawns, seawalls, docks and against buildings. Vessels were stabilized, hauled, staged (as needed) and after a proper period, crushed and disposed of.

There were 23 properties where total demolitions necessitating SDR to obtain permits, coordinate with utility providers, disconnect utilities, demolish the structure and slabs, load/haul material to the TDMS or final disposal and restore properties per the local building code.

PROJECT DESCRIPTION

Hurricane Idalia was a late August, western Caribbean tropical system that threatened the entire western peninsular Florida and the Big Bend Florida. SDR pre-staged Project Managers all along the projected impact area from the Tampa Bay region to Big Bend Florida and Southern Georgia.

Hurricane Idalia made landfall as a Category 3 (Major) hurricane in Big Bend Florida and quickly moved NE through southern GA.

Storm impacts and consequences resulted in home and business damage; some destroyed, many with major damage from high winds and flooding. Extensive tree damage resulted in blocked roadways, electrical distribution and transmission line damage and additional home/business damage.

SDR was in place with our pre-event contract in Gilchrist County, FL and because of past years' training and exercises, we moved seamlessly with the County response and recovery. SDR provided emergency resources to Books County, GA and Clinch County, GA. Crews initially worked to "make safe" the transportation corridors and then begin the task of debris removal and the recovery process.

SDR's Project Managers and Quality Assurance Director established debris removal operations consistent with contractual and FEMA PA requirements. SDR's Quality Assurance Director provided continual information and briefings to senior appointed officials to support the Counties' positioning for FEMA PA reimbursement.

PROJECT HIGHLIGHTS

Throughout this two-month FEMA (PA)-funded debris removal and disposal project, SDR utilized:

- 12 Bucket Trucks
- 14 Self-Loaders (doubles)
- 4 Skidsteers
- 3 Horizontal Grinders

PROJECT DESCRIPTION

An early-season tornado outbreak impacted the Southeastern United States on January 12, 2023. The result of a mid-level trough moving through, moisture and the presence of a strong low level jet aided in the development of numerous severe and tornadic thunderstorms. The National Weather Service confirmed 2 Tornados in Spalding County, GA (an EF-3 and an EF-2). The EF-2 hit the northern side of the City of Griffin.

Storm impacts and consequences resulted in tremendous home and business damage; some destroyed, many with major damage. Extensive tree damage resulted in blocked roadways, electrical distribution and transmission line damage and additional home/business damage.

SDR responded immediately to support our pre-event contract in Butts County, GA and provide emergency resources to Spalding County, GA and the City of Griffin, GA. Crews initially worked to “make safe” the transportation corridors and then begin the task of debris removal and the recovery process.

SDR implemented our Daily Incident Action Planning in conjunction with the impacted communities as an important quality control feature to make best use of resources in the impacted areas. We continued with ongoing updates to ensure contractual and FEMA Public Assistance program compliance.

PROJECT HIGHLIGHTS

Throughout this FEMA (PA)-funded debris removal and disposal project, SDR utilized:

- 22 Bucket Trucks
- 28 Self-Loaders
- 12 Skidsteers
- 4 Horizontal Grinders

PROJECT DESCRIPTION

Southeastern U.S. tornadoes produced F3 and F4 tornadoes, one of which hit Newnan, Georgia (an Atlanta suburb). The tornado storm system destroyed homes and caused major home and infrastructure damage to over 40% of the community. SDR responded rapidly to support the city of Newnan's disaster response and recovery efforts. Initial emergency clearance efforts were geared toward opening roadways for passage of public safety vehicles and other infrastructure restoration crews. The disaster debris removal was initiated immediately after the emergency phase to start early disaster recovery efforts for the community. SDR's contract with the city of Newnan including disaster debris removal of numerous waste streams (woody, vegetative, C&D, HHW, white goods/appliances, etc.) as well as removal of dangerous leaners, hangers and stumps. Woody, vegetative debris was reduced by grinding and then hauled for beneficial re-use after Georgia tornadoes in 2021.

PROJECT HIGHLIGHTS

Throughout this two-month FEMA (PA)-funded debris removal and disposal project, SDR utilized:

- 14 Bucket Trucks
- 23 Self-Loaders
- 11 Skidsteers
- 2 Horizontal Grinders

PROJECT DESCRIPTION

A winter storm in southeastern United States caused severe icing conditions in eastern Kentucky. Carter County, along with many other eastern Kentucky counties, found themselves in a disaster situation with iced over roads and crippling ice that brought trees and power lines down.

SDR was immediately put to work to support restoring access to the roadway system and thus support the community's recovery.

SDR assigned a project manager, project superintendents and safety officers and deployed over 107 crews over the life of the project. Crews hauled 135,000 CY of storm debris and removed over 28,000 dangerous leaning trees or hangers.

PROJECT HIGHLIGHTS

Throughout this six-month debris collection and disposal project, SDR utilized:

- 23 Bucket Trucks
- 84 Self-Loaders
- Skidsteer Loaders
- 4 Trackhoes

TAB 6 - FINANCIAL CAPABILITY

February 21, 2025

To Whom It May Concern:

SDR's 2023 Reviewed Financial statements attached.

During its twelve-year history, SDR has maintained all deposit accounts and loan obligations with no exceptions. SDR has established a strong relationship with HomeTrust Bank and has partnered with Disaster Relief Strategies to provide a high level of financing for project needs.

SDR has the financial strength to mobilize, manage, sustain, and finance multimillion-dollar projects without interference or a slow-down in the work. In fact, due to SDR's financial strength and strong banking relationships, **in 2021 SDR funded a disaster debris removal project exceeding $18 million for over 275 days before any progress payments were received**. During this time SDR's crews worked until the project was complete with no interruption to the debris removal efforts, and SDR paid all its financial obligations on time.

SDR has the financial capacity to respond to a disaster debris removal project of any size.

Sincerely,

Jon D. Jezowski

Independent Accountant's Review Report

To the Members
Southern Disaster Recovery, LLC
Greer, South Carolina

We have reviewed the accompanying financial statements of Southern Disaster Recovery, LLC (the "Company"), which comprise the balance sheet as of December 31, 2023, and the related statements of operations, changes in members' equity, and cash flows for the period January 1, 2023 through June 30, 2023 (unit redemption date) and the related notes to the financial statements. We have also reviewed the accompanying statements of operations, changes in members' equity, and cash flows for the period July 1, 2023 through December 31, 2023, and the related notes to the financial statements. A review includes primarily applying analytical procedures to management's financial data and making inquiries of Company management. A review is substantially less in scope than an audit, the objective of which is the expression of an opinion regarding the financial statements as a whole. Accordingly, we do not express such an opinion.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Accountant's Responsibility

Our responsibility is to conduct the review engagement in accordance with Statements on Standards for Accounting and Review Services promulgated by the Accounting and Review Services Committee of the American Institute of Certified Public Accountants. Those standards require us to perform procedures to obtain limited assurance as a basis for reporting whether we are aware of any material modifications that should be made to the financial statements for them to be in accordance with accounting principles generally accepted in the United States of America. We believe the results of our procedures provide a reasonable basis for our conclusion.

We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our review.

Accountant's Conclusion

Based on our reviews, we are not aware of any material modifications that should be made to the accompanying financial statements in order for them to be in accordance with accounting principles generally accepted in the United States of America.

Note 1—Organization

Southern Disaster Recovery, LLC (the "Company") is a rapid-response contractor specializing in environmental response and disaster recovery to commercial enterprises and all levels of governmental entities. The Company offers guidance in formulating debris management plans, training clients in debris disaster recovery, and managing debris recovery operations, including response, demolition, collection, reduction, and final disposal.

Note 2—Summary of significant accounting policies

Basis of Accounting – The Company's financial statements are prepared on the accrual basis of accounting in accordance with accounting principles generally accepted in the United States of America ("U.S. GAAP"). The Financial Accounting Standards Board ("FASB") has established the Accounting Standards Codification ("ASC") as the single source of authoritative accounting principles to be applied to the preparation of financial statements in accordance with U.S. GAAP.

Revenue and Cost Recognition – The Company utilizes the provisions of FASB ASC Topic 606, *Revenue from Contracts with Customers.* The Company enters into contracts with customers that specify the rates charged for providing certain services to the customer with payment terms of 30 days. Each service is considered a performance obligation and is satisfied upon the completion of the service. The Company also enters into separate contracts with subcontractors for debris removal. These contracts specify rates charged based on cubic yards of debris removed from a specified site. Third party, independent monitors track the cubic yards of debris delivered to the waste disposal site. Revenue is recognized at a point in time when the debris has been delivered and all services have been rendered.

From time to time, the Company will enter into a fixed-price contract. Revenue is recognized over time using the percentage of completion method (cost-to-cost input approach), measured by the percentage of costs incurred to date to the total estimated costs for each contract. Revenue recognition commences only after contract progress reaches a state whereby experience is sufficient to estimate a profit on the contract. At the time a loss on a contract becomes known, the entire amount of the estimated loss is recognized.

For the period January 1, 2023 through June 30, 2023 and the period July 1, 2023 (unit redemption) through December 31, 2023, the Company had no revenues recognized over a period of time.

Contract costs include all direct material, labor and employee benefit costs, and certain indirect costs related to contract performance, such as indirect labor, equipment rentals, insurance, and tools. Selling, general, and administrative costs are expensed as incurred. Changes in job performance, job conditions, and estimated profitability may result in revisions to costs and revenues and are recognized in the period in which the revisions are determined.

Cash and Cash Equivalents – The Company considers all cash and short-term investments with a maturity of three months or less when acquired to be cash and cash equivalents. At December 31, 2023, the Company held no cash equivalents.

Accounts Receivable – Accounts receivable consist of trade receivables stated at cost. The Company reviews receivables on a periodic basis and considers accounts delinquent after 90 days. The Company has not recorded an allowance for doubtful accounts as of December 31, 2023, as management believes all such amounts are collectible.

Prepaid Expenses – Prepaid expenses consist of amounts paid in advance by the Company for services that have not yet been provided to the Company. These prepaid expenses consist of insurance premiums, bond premiums, and other miscellaneous expenses paid by the Company for services that will be rendered after December 31, 2023.

Confidential

Note 2—Summary of significant accounting policies (continued)

Intangible Assets – The Company has applied the standards under ASC 805-20, *Business Combinations (Topic 805)*, related to the transaction described in Note 4. Under this standard, separately identifiable intangible assets are recorded based upon their fair values. Under the accounting alternative for business combinations, the valuation of certain customer related intangibles are no longer required for qualifying businesses and can be, instead, subsumed into goodwill. The Company amortizes goodwill on a straight-line basis over the useful life of the goodwill, determined to be 10 years, in accordance with FASB Accounting Standards Update ("ASU") 2014-02, *Accounting for Goodwill, a Consensus of the Private Company Counsel (Topic 350)*. The remaining intangible relates to the Company's trade name and is amortized over its estimated useful life of 10 years. The Company also adopted ASU 2021-03, under which impairment is assessed at the end of the reporting period. No indicators of impairment were identified as of December 31, 2023 (see Notes 4 and 5).

Accounts Payable – Accounts payable consist of amounts due to various subcontractors and vendors for services provided in the ordinary course of business.

Treasury Units – When units recognized as equity are repurchased, the amount of the consideration paid, which includes directly attributable costs, is recognized as a deduction from equity. Repurchased units are classified as treasury units and are presented net with members' equity. When treasury units are sold or reissued subsequently, the amount received is recognized as an increase in equity and the resulting surplus or deficit on the transaction is presented within unit premium. Treasury units are carried at cost.

Income Taxes – The Company is not directly subject to federal and state income taxes. Instead, the members are liable for individual federal and state income taxes on their respective share of taxable income. Management has evaluated all other tax positions that could have a significant effect on the financial statements and determined the Company had no uncertain income tax positions at December 31, 2023. The Company paid certain taxes on behalf of its members and presents within distributions.

Advertising Costs – The Company expenses advertising costs as they are incurred. Advertising costs totaled $4,093 and $2,009 for the period July 1, 2023 (unit redemption) through December 31, 2023 and for the period January 1, 2023 through June 30, 2023, respectively, and are included in general and administrative expenses on the statements of operations.

Concentrations – For the period July 1, 2023 (unit redemption) through December 31, 2023, the Company's four largest customers accounted for approximately 84% of the Company's total revenue for that period. These customers also represented approximately 91% of gross accounts receivable at December 31, 2023. For the period January 1, 2023 through June 30, 2023, the Company's four largest customers accounted for approximately 93% of the Company's total revenue for that period.

For the period July 1, 2023 (unit redemption) through December 31, 2023, the Company's four largest vendors accounted for approximately 67% of purchases and 66% of total accounts payable at December 31, 2023. For the period January 1, 2023 through June 30, 2023, the Company's three largest vendors accounted for approximately 73% of the Company's total revenue for that period.

Use of Estimates – The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the amounts reported in the financial statements and the accompanying notes. Actual results could differ from those estimates and those differences may be material. Management believes the estimates used in the financial statements are reasonable based on the information currently available.

Distributions to Members – As described in the Company's Operating Agreement (the "Agreement") dated September 30, 2015 and restated as of June 30, 2023, distributions shall be made to members at the discretion of the managing members of the Company, as defined in the Agreement. Distributions to members shall be paid in accordance with the allocation of membership interests, subject to certain terms and restrictions as defined in the Agreement.

Confidential

Note 2—Summary of significant accounting policies (continued)

Change in Accounting Principle and Adoption of New Accounting Pronouncements – In June 2016, FASB issued ASU 2016-13, *Financial Instruments – Credit Losses (Topic 326)*, and subsequently related amendments (ASU 2018-19, ASU 2019-04, ASU 2019-05, ASU 2019-10, ASU 2019-11, and ASU 2022-02). This guidance replaces the existing incurred loss impairment guidance and establishes a single allowance framework for financial assets carried at amortized cost based on expected credit losses. The estimate of expected credit losses requires the incorporation of historical information, current conditions, and reasonable and supportable forecasts. The Company adopted this new accounting standard effective January 1, 2023 and all of the related amendments using the modified retrospective method. The Company applied the new credit loss standard to its trade accounts receivables. There was no significant impact to the Company's financial position or operating results for the current period due to this standard update.

Note 3—Cash risk of loss

The Company places its cash and cash equivalents on deposit with financial institutions in the United States. The Federal Deposit Insurance Corporation covers $250,000 for substantially all depository accounts. The Company from time to time may have amounts on deposit in excess of the insured limits. At December 31, 2023, the Company had $547,825 which exceeded these insured amounts.

Note 4—Membership unit redemption transaction

Effective June 30, 2023, the Members executed a Membership Unit Redemption Agreement (the "Agreement") whereby the Company repurchased 475,000 of the 950,000 outstanding membership units for $10,000,000. The repurchased units were classified as treasury units and may be cancelled or reissued upon member approval. The transaction met the change of control requirements under U.S. GAAP. Under such transactions, U.S. GAAP requires the recognition of the assets and liabilities at their fair values as of the date of the transaction. The following table summarizes the fair value of the identifiable assets acquired and liabilities assumed at the redemption date:

Cash and cash equivalents	$ 1,085,075
Accounts receivable	3,125,195
Prepaid expenses	40,698
Tradename	1,343,000
Goodwill	18,564,015
Accounts payable	(2,802,983)
Accrued wages	(719,381)
Other liabilities	(187,633)
Billings in excess of costs and estimated earnings	(447,986)
Purchase price	$ 20,000,000

The fair value of the consideration is as follows:

Cash	$ 3,000,000
Debt acquired	7,000,000
Rollover equity	10,000,000
Total fair value of consideration	$ 20,000,000

Confidential

Note 5—Intangibles

As a result of the transactions disclosed in Note 4, the Company held the following intangible assets at December 31, 2023:

	Goodwill	Trade Name	Accumulated Amortization	Net Intangibles
July 1, 2023	$ 18,564,015	$ 1,343,000	$ -	$ 19,907,015
Current period amortization	-	-	(995,350)	(995,350)
December 31, 2023	$ 18,564,015	$ 1,343,000	$ (995,350)	$ 18,911,665

The estimated amortization expense expected to be charged to income over the next five years and, thereafter, is as follows:

2024	$ 1,990,700
2025	1,990,700
2026	1,990,700
2027	1,990,700
2028	1,990,700
Thereafter	8,958,165
	$ 18,911,665

Note 6—Line of credit

In November 2023, the Company executed a line of credit agreement with a bank that allowed for maximum borrowings up to $5,000,000 with a variable interest of the highest prime rate published by the Wall Street Journal plus .75% (9.25% as of December 31, 2023). Interest is payable monthly, and all outstanding principal is due on November 27, 2024. At December 31, 2023, availability amounted to $564,004. All outstanding balances are collateralized by the assets of the Company, and are personally guaranteed by the members. Furthermore, the line of credit agreement is subject to both financial and nonfinancial covenants. Total interest expense amounted to $9,674 for the period July 1, 2023 (stock redemption) through December 31, 2023.

Confidential

Note 7—Notes payable

Notes payable consist of the following at December 31, 2023:

Note payable to former member in the original amount of $4,000,000, principal is due upon the earlier of collection of certain receivables or $1,000,000 annually through July 2026, interest is payable monthly at the greater of the prime rate or of 6% (8.25% at July 31, 2023), collateralized by a personal guarantee of an existing member and the equity of the Company. This note was fully satisfied during the period July 1, 2023 (unit redemption) through December 31, 2023.	$ -
Note payable to former member in the original amount of $3,000,000, principal is due in annual payments of $1,000,000 through July 2026, interest is payable monthly at the greater of the prime rate or of 6% (8.50% at December 31, 2023), collateralized by a personal guarantee of an existing member and the equity of the Company.	3,000,000
	3,000,000
Less current maturities	(1,000,000)
	$ 2,000,000

As of December 31, 2023, future maturities were as follows:

2024	$ 1,000,000
2025	1,000,000
2026	1,000,000
	$ 3,000,000

Total interest expense amounted to $160,027 for the period July 1, 2023 (unit redemption) through December 31, 2023.

Note 8—Retirement plan

The Company maintains a profit-sharing plan under Section 401(k) of the Internal Revenue Code for all employees who have completed the eligibility requirements stated within the Plan document. Plan contribution expense totaled $37,389 and $13,112 for the period July 1, 2023 (stock redemption) through December 31, 2023 and for the period January 1, 2023 through June 30, 2023, respectively.

Note 9—Related party transactions

The Company is obligated to a current member in the amount of $7,888,942. This arrangement is uncollateralized, verbal, bears no interest, and is due on demand. The individual has assured the Company they do not intend to seek repayment during the next twelve months.

Note 10—Leases

The Company rents office space under a verbal month-to-month lease agreement. In addition, various equipment is rented on a daily or monthly basis based on current open customer projects. These leases qualify for short-term treatment under ASC 842, *Leases*, and are expensed as incurred.

Confidential

Note 11—Commitments and contingencies

The Company is from time to time subject to various claims, legal actions, and other matters arising out of the normal conduct of the Company's operations. Based on prior experience and available information, the Company does not anticipate any lawsuits to be material to the financial statements.

Note 12—Subsequent events

The Company has evaluated subsequent events through April 26, 2024, the date which the financial statements were available to be issued.

TAB 7 - PROJECT COST

EXHIBIT A

DISASTER DEBRIS REMOVAL AND DISPOSAL SERVICES RFP# 25-05-PW

COST PROPOSAL

Items will be used for evaluation purposes only. Quantities are not guaranteed and are used for evaluation purposes only. Prices shall be all-inclusive of requirements as defined in the scope of work. All labor rates are to be fully burdened to include all taxes, benefits, handling charges, overhead, and profits.

ELIGIBLE VEGETATIVE DEBRIS REMOVAL Work consists of the collection of transportation of Eligible Vegetative Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$7.25	3,940,000	$28,565,000.00
16-30 miles	$7.40	500,000	$3,700,000.00
31-60 miles	$7.50	50,000	$375,000.00
61+ miles	$7.55	10,000	$75,500.00

ELIGIBLE C&D DEBRIS REMOVAL Work consists of the collection of transportation of Eligible C&D Debris on the ROW to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$7.30	50,000	$365,000.00
16-30 miles	$7.50	700,000	$5,250,000.00
31-60 miles	$7.95	700,000	$5,565,000.00
61+ miles	$8.66	50,000	$433,000.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF NON-RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible Non-RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$24.00	10,000	$240,000.00
16-30 miles	$26.00	90,000	$2,340,000.00

31-60 miles	$26.75	90,000	$2,407,500.00
61+ miles	$27.00	10,000	$270,000.00

ELIGIBLE DEMOLITION, REMOVAL, TRANSPORT AND DISPOSAL OF RACM STRUCTURES Work consists of the decommissioning, demolition and disposal of Eligible RACM Structures on public or private property and hauling the resulting debris to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$24.00	10,000	$240,000.00
16-30 miles	$26.00	90,000	$2,340,000.00
31-60 miles	$26.75	90,000	$2,407,500.00
61+ miles	$27.00	10,000	$270,000.00

DDMS SITE MANAGEMENT, OPERATIONS AND REDUCTION Work consists of managing and operating DDMS sites and reducing Eligible disaster debris through grinding or source separation and reduction. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Grinding	$3.35	4,400,000	$14,740,000.00

DDMS SITE MANAGEMENT AND REDUCTION OF VEGETATIVE DEBRIS THROUGH AIR CURTAIN INCINERATORS Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through air curtain incinerators. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$3.48	50,000	$174,000.00

DDMS Site Management and Reduction of Vegetative Debris Through Controlled Open Burning Work consists of managing and operating DDMS sites and reducing Eligible vegetative disaster related debris through controlled open burning. Contractor shall provide certified scales and/or debris site towers as requested by City.	Price per CY	Estimated Total Units	TOTAL
Vegetative Waste Only	$2.48	50,000	$124,000.00

Haul-out of Reduced Eligible Debris to a County Designated Final Disposal Site Work consists of loading and transporting reduced Eligible disaster related debris from a City approved DDMS site to a City Designated Final Disposal Site.	Price per CY	Estimated Total Units	TOTAL
0-15 miles	$4.85	100,000	$485,000.00
16-30 miles	$6.68	450,000	$3,006,000.00
31-60 miles	$7.70	450,000	$3,465,000.00
61+ miles	$8.95	120,500	$1,078,475.00

Removal of Eligible Hazardous Leaning Trees and Hanging Limbs Work consists of removing Eligible hazardous trees or limbs and placing them on the safest possible location on the ROW for collection under the terms and conditions of Scope of Services, Eligible Vegetative Debris Removal.	Price per Tree	Estimated Total Units	TOTAL
6” to 12” diameter	$125.00	200	$25,000.00
13” to 24” diameter	$300.00	500	$150,000.00
25” to 36” diameter	$425.00	200	$85,000.00
37” to 48” diameter	$625.00	100	$62,500.00
49” and larger diameter	$800.00	50	$40,000.00

REMOVAL OF ELIGIBLE HAZARDOUS STUMPS Work consists of removing Eligible hazardous stumps and transporting resulting debris on the ROW to a City approved DDMS site or City Final Disposal Site. Contractor to backfill all stump holes.	Price per Stump	Estimated Total Units	TOTAL
25" to 36" diameter	$275.00	100	$27,500.00
37" to 48" diameter	$345.00	50	$17,250.00
49" and larger diameter	$525.00	50	$26,250.00

TRANSPORT & DISPOSAL Work consists of the removal, transportation and disposal of Eligible Household Hazardous Waste (HHW). City to designate specific materials to be collected as part of HHW program.	Price per CY	Price Per LB	TOTAL
Cost Per Pound		$7.25	

ELIGIBLE ROW WHITE GOODS DEBRIS REMOVAL Work consists of the removal of Eligible White Goods from the ROW to a designated City approved DDMS Site. Contractor shall be responsible for recovering/disposing refrigerants as required by law as well as unit decontamination in a contained area. The Contractor shall also be responsible for the transportation of Eligible White Goods from the designated County approved DDMS site to an approved designated facility for recycling. Contractor shall record any revenue resulting from recycling efforts as a credit to the City on invoices.	Price per Unit	Estimated Total Units	TOTAL
Refrigerators, freezers, and other items requiring refrigerant recovery and decontamination	$74.00	500	$37,000.00
All other white goods	$49.00	500	$24,500.00
		1000	

ELIGIBLE E-WASTE ITEM REMOVAL Work consists of the recovery and disposal of televisions, computers, computer monitors unless otherwise specified in writing by the City.	Price per Unit	Estimated Total Units	TOTAL
Cost per unit	$58.00	500	$29,000.00

ELIGIBLE DEAD ANIMAL CARCASSES Work consists of the recovery and disposal of dead animal carcasses.	Price per Unit	Estimated Total Units	TOTAL
Small animals less than 100 pounds	$1.75	950	$1,662.50
Large animals more than 101 pounds	$2.25	50	$112.50
		1000	

WATERWAYS DEBRIS REMOVAL Work consists of the removal, transportation and lawful processing and/or disposal of debris collected from waterways and drainage systems to a City approved DDMS site or City Designated Final Disposal Site.	Price per CY * $125.00	Estimated Total Units	TOTAL $1,250,000.00	* From the Water
Cubic yard	** $78.00	10,000	$780,000.00	** From the Land

SOIL/SAND/BEACH SCREENING Work consists of the collection of Eligible debris laden sand from City beaches, transportation to a processing screen, processing of sand through a screen, maintenance of sand pile, transportation of sand back to the City beach and shaping sand to final grade	Price per CY	Estimated Total Units	TOTAL
Cubic yard	$69.50	1000	$69,500.00

TAB 8 - BUSINESS STRUCTURE & PROFESSIONAL REGISTRATION CERTIFICATES

State of Florida
Department of State

I certify from the records of this office that SOUTHERN DISASTER RECOVERY, LLC is a South Carolina limited liability company authorized to transact business in the State of Florida, qualified on May 30, 2017.

The document number of this limited liability company is M17000004656.

I further certify that said limited liability company has paid all fees due this office through December 31, 2025, that its most recent annual report was filed on February 24, 2025, and that its status is active.

I further certify that said limited liability company has not filed a Certificate of Withdrawal.

Given under my hand and the Great Seal of the State of Florida at Tallahassee, the Capital, this the Nineteenth day of March, 2025

Secretary of State

Tracking Number: 7582888317CU

To authenticate this certificate,visit the following site,enter this number, and then follow the instructions displayed.

SAFETY PLAN

DEBRIS REMOVAL SAFETY

R. Chip Patterson
chip@southerndr.com

OSHA Job Related Injuries: Facts and Requirements

Over the past four decades, employers, safety and health professionals, and the Occupational Safety and Health Association (OSHA), along with their state partners, have had a dramatic effect on workplace safety. Worker deaths have decreased on average from about 38 worker deaths per day in 1970 to 14 per day in 2016. Worker injuries and illnesses are down from 10.9 incidents per 100 workers in 1972 to 2.9 per 100 in 2016. Nevertheless, we must remain diligent in our efforts to educate employees on proper work behaviors to ensure the maximum level of safety for all concerned.

OSHA is working with employers and employees to move toward zero injuries and illnesses in U.S. workplaces by utilizing the following criteria:

- Reporting Catastrophes – When a worker is killed in the job and/or three or more workers are hospitalized, the employer covered by OSHA must report to the agency within 8 hours.
- Providing First Aid – Employers who cannot reach a hospital, infirmary, or clinic within a reasonable amount of time must be prepared to provide first aid to workers who experience injuries or illnesses on the job. OSHA requires that first aid supplies be readily available and that someone must be adequately trained to render first aid.
- Recording Injuries and illnesses – Most employers in high hazard industries are required to keep records of injuries and illnesses experienced by their employees. Those with 10 or fewer employees are exempt from recordkeeping requirements in most cases.
- One of the hallmarks of an effective safety and health management system is a commitment to investigate EVERY incident that results in a worker injury or illness, including the near-misses. By immediately following up, employers can identify root causes and take corrective steps to prevent future problems.

When it comes to injuries and illnesses, the best defense is a good offense – a pro-active safety and health management systems that focuses on finding and fixing hazards before they can lead to problems.

Proper safety can mean the difference between no injuries, a minor injury, and a major incident with severe injuries or even death.

Safety During Disaster Cleanup and Recovery

Hurricanes and major storms often result in widespread flooding and damage to property and infrastructure. Clean up and recovery activities involve hazards that can cause serious injuries or death.

- It is important that you assess the potential for hazardous conditions and/or exposures *before* you engage in any cleanup activities.
- Based on initial assessment of hazards, employers need to provide workers with the appropriate personal protective equipment (PPE), training, and information to safely perform the work.
- Workers' Rights – The Occupational Safety and Health Act of 1970 (OSHA Act) was passed to prevent workers form being killed or seriously harmed at work. The law requires that employers provide their employees with working conditions that are free of known dangers. OSHA sets and enforces protective workplace safety and health standards. Workers may file a complaint to have OSHA inspect their workplace if they believe their employer is not following OSHA standards.

OHSA provides the following hazards and safety measures:

	Possible Hazards	Protective Measures
Contaminated Floodwaters	• Bacteria and other infectious organisms (from sewage) in water and soil. • Toxic substances from flooded industrial and waste sites. • Mold and fungi in the air. 	• Ventilate enclosed spaces with fresh air. • Assume that floodwater is contaminated unless proven otherwise. • Allow only trained workers with the proper personal protective equipment to clean up toxic chemicals, other hazardous waste, and mold. • Be up-to-date with a tetanus shot (within the last 10 years). • Discard water-damaged and visibly contaminated materials. • Use waterproof boots, latex or rubber gloves and other protective clothing. Consider using special chemical-resistant outer clothing and protective goggles. • Use an N-95 NIOSH-approved disposable respirator, at a minimum, when handling mold-contaminated materials. • Keep an adequate supply of clean water available for drinking and washing.
Downed Power Lines	• Burns and electrocution from contact with energized lines or objects, including tree limbs, in contact with downed power lines.	• Assume that all power lines are live or energized. • Establish and clearly mark a danger zone around downed lines. Stay at least 10 feet from all downed lines. • Allow only properly trained and equipped workers to repair electrical wires.
Tree Trimming and Debris Removal	• Electrocution from contact with power lines or tree limbs in contact with power lines. • Being struck or crushed by falling tree limbs. • Injuries from equipment, such as chain saws and chippers. • Strains and sprains from lifting or moving tree limbs and other debris.	• Contact the utility company to de-energize and ground or shield power lines. All tree trimming/removal within 10 feet of a power line must be done by trained tree trimmers. • Establish and clearly mark a danger zone where tree debris may fall onto workers. Stay alert at all times. • Use work gloves, a hard hat, work boots, hearing protection and eye/face protection. Wear chaps when using a chainsaw. • Watch out for chainsaw kickback. Do not cut with saw tip. • Do not get too close to a chipper. Never reach into an operating chipper. • Use mechanical equipment to lift heavy objects. If not possible, use extra people and proper lifting techniques.

(Continued on next page)

	Possible Hazards	Protective Measures
Falls	• Falls from aerial lifts, ladders, roofs, and other elevated work surfaces. • Slippery and uneven working surfaces that can create injuries due to slips, trips and falls.	• Use safe procedures to prevent aerial lift tip-overs. Use a body harness or restraining belt with a lanyard attached to the boom or basket of the lift. • Use proper ladder safety (e.g., set on firm and stable ground, maintain "three-point" contact, do not stand on top rung). • Be aware of wet or slippery surfaces, obstacles, or uneven surfaces on the site.
Portable Generators	• Shocks and electrocution from gas- and diesel-powered generators. • Toxic carbon monoxide (CO) from generator exhaust. • Fires from improper refueling and fuel storage.	• Never run a portable generator inside a house or in an enclosed space like a garage. • Inspect electric cords to ensure they are in good condition and free of defects. Use a ground-fault circuit interrupter (GFCI). • Ensure that spaces where generators are used are properly ventilated. • Shut down the generator before refueling. Never store fuel or the generator indoors.
Work Zones	• Transportation incidents (injuries and deaths) in work zones where workers are struck by moving vehicles and mobile equipment.	• Wear high-visibility clothing and headwear compliant with ANSI/ISEA 107-2004. • Use proper traffic controls (i.e., signs, cones, barriers). • Use proper lighting, flaggers and worksite communications. • Make sure that vehicle operators are properly trained. • Always use seat belts and rollover protection.
Construction Activities	• Exposure to asbestos-contaminated materials during the demolition of buildings and structures. • Spaces with limited access, suffocation hazards, or which are confined spaces. • Trenching and excavation accidents (cave-ins). • Risk of back, knee and shoulder injuries from manual lifting and handling of building materials and fallen tree limbs.	• Properly select and use PPE (personal protective equipment) which may include respiratory protection, along with other procedures detailed in 29 CFR 1926.1101. • Do not enter permit-required confined spaces without training and a permit to enter. See 29 CFR 1910.146 for more information. • Prevent cave-ins by benching, sloping, shoring, or shielding the soil. See 29 CFR 1926.651 and 1926.652 for more information. • Use proper lifting techniques and teams of two or more to move bulky or heavy items.

Work Zone Traffic Safety

There must be a traffic control plan for the movement of vehicles in areas where there are also workers conducting other tasks. The authority in charge: federal, state, or local, will determine the configuration of the temporary traffic control zone for motorists and pedestrians. The project manager will determine the internal traffic control plan within the construction/demolition worksite.

- Signs – standard highway signs for information, speed limits, and work zones will assist drivers in identifying, in designated traffic paths.
- Traffic Control Devices – standard traffic control devices, signals, and message boards such as cones, barrels, barricades, and delineator posts will instruct drivers to follow a path away from where work is being done.
- Flagging - Flaggers and others providing temporary traffic control should wear high visibility clothing with a background of fluorescent orange-red or yellow-green and retroreflective material of various colors. These will make the worker visible against the background for at least 1,000 feet from any direction.
- Drivers should have advanced warning with signs that there will be a flagger ahead. Flaggers should use STOP/SLOW paddles, paddles with lights, or flags.
- Lighting – Flagger stations should be illuminated. Lighting for workers on foot and equipment operators is to be at least 5 foot-candles or greater. Where available lighting is not sufficient, flares or chemical lighting should be used. Glare affecting workers and motorists should be controlled or eliminated.
- Driving – Seat belts and rollover protection should be used on equipment and vehicles as stated by the manufacturer.

Flagger Safety

As a flagger, you have a crucial job to do. Safely controlling the flow of traffic around services vehicles and work sites ensures the safety of the operators, equipment and passing motorists. You must tell them when they need to stop, slow down or the direction in which they should proceed.

Basic rules for flagger safety are:

- Stay alert. Keep your mind on your job.
- Stand on the shoulder. Stay off the roadway and out of the way of traffic.
- Face traffic—so you can check the path and speed of approaching vehicles.
- Protect yourself.
- Have an escape route planned.
- Leave your post ONLY when you have been relieved.
- Always wear high-visibility safety apparel that meets the requirements of ANSI/ISEA 107-1999 for class 2 risk exposure. All workers on a Federal-Aid or Texas state highway must wear safety apparel that meets the requirements of ANSI/ISEA 107-2004 for Class 2 or Class 3 exposure: A hardhat, safety footwear, and safety eyewear is also recommended.

For your safety, you should pay close attention to the flow of traffic, and to the placement and condition of signs and other traffic control devices. Be especially alert for the following:

- Unusual driving behavior, such as sudden braking and stopping.
- Skid marks, a warning sign of motorist confusion.
- Signs and other traffic control devices out of place.
- Faded, stained or damaged signs and other traffic control devices.
- Traffic problems caused by the weather or by changed road or pavement conditions.
- For your safety, report all problems to your supervisor immediately. Traffic control adjustments may be needed.

For your safety, it is extremely important for drivers to see you in time to respond to your signals and to stop at the intended stopping point. To make certain the motorists see you, stand out from your surroundings and:

- Stand alone, not with other workers.
- Do not stand in the shade.
- Do not stand in front of construction equipment or signs.
- Keep your vehicle away from your flagger station.

Speed	Distance
20 mph	115 feet
25 mph	155 feet
30 mph	200 feet
35 mph	250 feet
40 mph	305 feet
45 mph	360 feet
50 mph	425 feet
55 mph	495 feet
60 mph	570 feet
65 mph	645 feet
70 mph	730 feet
75 mph	820 feet

Personal Protection Equipment (PPE)

Using personal protective equipment (PPE) is often essential but is generally the last line of defense after engineering controls, work controls, and administrative controls.

- Protection from head injuries – hard hats can protect from head impact, penetration injuries and electrical injuries such as falling or flying objects, fixed objects or contact with electrical conductors.
- Protection from foot and leg injuries – foot guards, safety shoes, industry leggings protects from falling or rolling objects, sharp objects, wet and slippery surfaces, molten metals, hot surfaces and electrical hazards.
- Protection from eye and face injuries – goggles, face shields, and spectacles with side shields protect against flying fragments, large chips, hot sparks, optical radiation, splashes, sand, dirt, mists, dusts and glare.
- Protection from hearing loss – high noise levels can cause irreversible hearing loss or impairment.
- Protection from hand injuries – protects against harmful substances, severe cuts and lacerations, severe abrasions, chemical burns, thermal burns and harmful temperature extremes.
- Protection from respiratory injuries – appropriate and properly fitted respirators and masks must be worn at times to protect against harmful dusts, fumes, fogs, mists, gases, smokes, sprays or vapors.

**Note: Required respirators must be NIOSH-approved and medical evaluation and training must be provided before use.*

OSHA Hurricane Cleanup PPE Matrix

- Workers engaged in hurricane cleanup and recovery activities may be exposed to a variety of hazards. A comprehensive list of potential hazards and controls are provided in OSHA'S Hurricane Matrix to assist employers in determining the PPE needed for specific task.
- In addition to PPE, proper sanitation and hygiene are essential for minimizing the spread of contaminants and disease. Hand washing is a critical component of good hygiene. In the absence of suitable facilities, workers should be provided with hand sanitizer.
- It is essential that employers and employees assess each site and operation individually to determine the actual or potential hazards based on site-specific conditions. Employees must always be trained to recognize hazards and take necessary precautions.
- Workers relying on PPE must be trained to recognize these limitations, as well as the safe ways to put on and remove PPE, properly store it, take care of it, and when it's time to replace it.

PPE / Task		Normal Cleanup Activities	Working in Wet Conditions	Working with Chain Saws	Working Near/Over Water	Working at Heights Over 6 ft.	Working Near Loud Noise
Head	Hard Hat	X	X	X	X	X	X
Eyes	Safety Glasses	X		X	X	X	X
	Safety Goggles		X				
Face	Face Shield			X			
Ears	Hearing Protection			X			X
Hands	Work Gloves	X		X	X	X	X
	Latex/Rubber Gloves		X				
Body	Hi-Visibility Garment	X	X	X	X	X	X
	Impervious Body Suit		X				
	PFD and Life Ring				X		
	Chaps			X			
	Fall Protection					X	
Feet	Steel Toe Boots	X		X	X	X	X
	Waterproof Boots		X				
Other PPE	Workboat/Skiff				X		

Respiratory Protection: The employer must assess site-specific conditions for potential respiratory contaminants and protection.

- Where mold is known to be or potentially may be present, use an approved respirator. See the OSHA fact sheet (OSHA FS-3619).
- Where asbestos is known to be or potentially may be present and disturbed, higher levels of protection are required. In addition, the requirements of OHSA's Asbestos standard, 29 CFR 1910.1001, also need to be followed.
- Where chemical contaminates are present, such as organic chemicals, different cartridges or filters are required depending on the chemical.
- Common respirators do not protect workers from carbon monoxide (CO), which is present in the exhaust from generators and other internal combustion engines.
- Training regarding the limitations of respirators, proper fitting, when they should be replaced, and medical considerations for the user is essential.

Vehicle Safety

It is the responsibility of the user/operator to read and understand the safety and users' manuals for the vehicle and equipment in which they are operating. Safety policies and procedures protect the individual

operator, the employer and the people around you. A copy of the user's manual must be kept in the vehicle at all times as a reference guide.

- Equipment required - User manual, chock blocks (2), fire extinguisher, traffic cones w/stripes (4), first aid kit, full body harness, lanyard - < 2" in length, appropriate protective clothing. Loose fitting clothing, hair and the like must be restrained to prevent accidental introduction into electrical or mechanical.
- Additional safety equipment includes a portable radio for communication when operator is alone, safety glasses for face shields if required, head protection, and equipment and tools used on the work site must be compatible with the environment.

Vehicle Safety - Vehicle Inspection

Daily safety checks – As required, the operator of the vehicle for that particular day shall conduct a *"safety circle check"* of the vehicle to determine hazards, identify damage and leaks and report same to the vehicle maintenance supervisor.

A quick walk-around inspection will help you identify safety-related problems before you begin your trip.

– Courtesy of Evergreen Safety Council

Daily check shall include but is not limited to:

- A visual inspection of the vehicle exterior, including: broken, damaged, loose or missing parts, tire bulges, cuts and pressure, oil and hydraulic leaks; weld integrity, such as cracks and rust, lighting (beam, directional and safety), all required decals and stickers on or around the articulating boom must be in place, legible and understandable. A complete vehicle inspection form and the identified deficiencies shall be provided to the Supervisor or the Vehicle Maintenance Department as soon as possible for corrective action.
- Vehicle placement and operation – prior to starting the vehicle walk around to verify safe operation; remove cone from the front or rear of the vehicle depending on weather you are backing or heading in a forward direction; whenever possible (in accordance with vehicle safety policy) a “spotter” shall be used when the vehicle is being set into reverse.

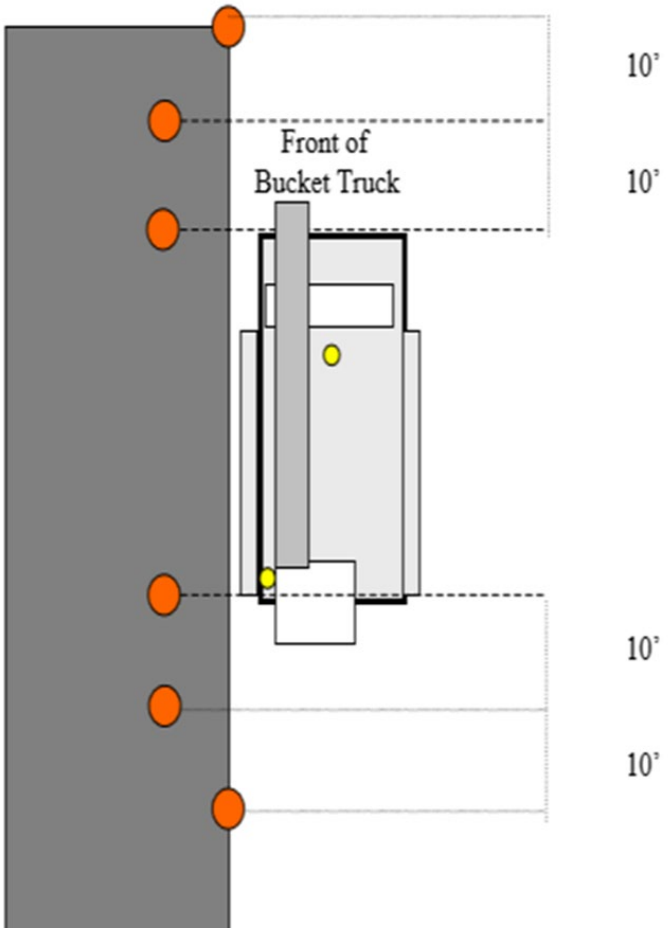
Work Site Safety (vehicle related):

- Identify the most level grade from which to operate – the slope should not exceed 5 degrees. If operation of bucket must be performed on an include > 5 degree, then the bucket shall only be sued on the high side of the vehicle.
- Set emergency brake - the aerial platform should not operate until the brake has been engaged.
- Position both wheel chocks, one on each side of the tire
- Set barricades and cones around the vehicle. If the operator will be working in a pedestrian area then barricades, “Caution” tape or fencing shall be utilized; cones are NOT permitted.
- Maintain proper distance from electrical power lines
- Do not operate an articulating boom if the wind gusts exceed 30 mph and/or there is or could be an electrical storm.
- Verify that the area under and around the work site is free of passers-by.
- Check out overhead clearances – building design, fixtures and set-up, equipment, lights, sprinkler heads and tree limbs.

Traffic Safety and Cone Placement:

- Special planning for traffic control is necessary on a case by case basis. Maintenance work that takes place either on or near the roadway creates a potentially hazardous situation, which shall require the use of traffic controls. It is the responsibility of the person in charge or their designee to establish and maintain safe and efficient controls.
- All necessary traffic control devices shall be installed before maintenance work begins and must be maintained during the entire work period
- Traffic control devices (i.e. barricades, cones etc.) provide proper drivers with sufficient advanced warning, provide proper protection for the motorists and our employees and advise motorists of proper travel path
- When parked, a cone shall be placed at the rear of the vehicle when the truck will be backed up or out of spot and at the front of the vehicle when the truck will be driven forward.
- The Speed Limit on Campus is 15 mph, therefore a minimum of (2) cones shall be placed behind and in front of the bucket truck when use in the street is required and each cone must be separated by a distance of not less than 10”.

Vehicle Safety: Cone Placement



Crane, Boom and Bucket Truck Safety

As reported in the 2012 Safety Leader's Discussion Guide, the average number of incidents involving the use of cranes killed 50 US workers per year.

Although OSHA may exempt knuckle boom and articulating boom trucks that make deliveries to construction sites form the stringent regulations affecting cranes, companies using these trucks still must take steps to ensure safe use.

It's important that we empower and authorize the operator to refuse to make any lift that he or she determines he or she cannot make safely.

Acceptable Lift Conditions

- Position the boom truck in a manner that the boom will maintain a minimum of 10 feet from the power lines or 10 feet, plus 4 inches for ever increase in 10Kv Power intensity.
- Position the boom truck in a manner which ensures stability. (For example. Both stabilizers can fully extend and lower; the surface is such that the operator can use the stabilizers with or without additional padding, etc.)
- Position the boom truck in a manner to avoid striking any object or person.

Unacceptable Lift Conditions

- DO NOT position the boom truck in a manner that the boom cannot maintain the required distance specified by OSHA.
- DO NOT position the boom truck in a manner in which the operator cannot ensure stability. (For example, both stabilizers cannot fully extend and lower; the surface is so soft that the operator cannot use the stabilizers even with additional padding, etc.
- DO NOT position the boom truck in a manner in which the operator cannot avoid striking an object or person.
- The wind is judged to be blowing hard enough to prevent a safe lift.
- Any other situation in which the operator does not believe he or she can run the boom truck safely.

Critical Lift Conditions

The National Institute for Occupational Safety and Health (NIOSH) and others have identified certain types of hoisting operations that require special considerations to ensure worker safety. The operator judges if the wind is blowing hard enough to affect the safety of the lift. A critical lift generally identifies hoisting operations for which the margin for error is reduced. A critical lift occurs when either one or both of the following conditions exist:

- A lift that exceeds 75 percent of the rated capacity of the crane or derrick.
- Requires the use of more than one crane or derrick.

Bucket trucks are used in many industries and can be seen alongside roads every day. These trucks come in a variety of sizes and shapes, each designed to help you complete your work in a comfortable, safe, and efficient manner. While your bucket truck can make your job easier to complete, it is still a large piece of equipment with many inherent hazards including tip overs, falling objects, danger of electrocution and falls. Bucket truck operators must be trained to use them properly and comply with the OSHA standard for aerial lifts (1926.453).

Safety Tips

- The operator of the vehicle should conduct a safety/circle check of the vehicle to determine hazards, identify damage and leaks
- The daily check includes but is not limited to a visual inspection of the vehicle exterior, including: broken, damages or loos parts; tire bulges, cuts and pressure; oil and hydraulic leaks; weld integrity such as cracks and rust; lighting, all required decals and stickers on or around the articulating boom must be in place legible and understandable.
- Do not park on uneven ground.
- Keep an eye out for drops offs, holes and debris.
- Do not operate the boom if wind gusts exceed 30 mpg or there is a threat of an electrical storm.
- Set emergency brake.
- Position wheel chocks.
- Look out for overhead obstructions.
- Always keep feet on the floor of the bucket.
- Do not sit, stand or climb on the edge of the basket.
- Do not try place any item in the bucket for the purpose of increasing work height (ladders, step stools).
- Do not try to climb down from the bucket when it is raised.
- Make sure the bucket floor is clear of debris.

- Always Wear Fall Protection!
- Do not push or pull anything while raised in the bucket.
- Do not carry ladders, etc. in bucket
- Do not exceed the load capacity.
- Do not move the truck when bucket is raised.
- Make sure outriggers are positioned properly.
- Never use the bucket truck as a crane.
- Watch for traffic and beware of blind spots when driving the truck – take it SLOW.
- Travel very slow on bumpy or sloped ground and when driving near other workers or pedestrians.
- Never leave a truck unattended unless the key is taken out and the truck is secured from unauthorized users.
- Never refuel the truck when the engine is running.
- NEVER USE A DAMAGED MACHINE!

Tree Care Work: Falls and Falling Object Hazards

Falling Object Incident:

A tree care worker was dragging trimmed branches to a mobile wood chipper. A second worker, a trimmer, was working from a mobile bucket truck. The trimmer was piecing out a large maple tree
scheduled for removal from the rear of a residence. The trimmer cut a piece of a limb that was approximately one foot in diameter and 20 inches long. When the limb fell, it struck the tree care worker on the head, killing him. An investigation of this incident determined that ground personnel should not have been in the tree- trimming area, or “drop zone”, while the trimmer was performing overhead work. The employer was required to establish a system of verbal and visual communications that the trimmer could use to inform ground personnel to stand clear when an overhead hazard existed.

Fall Incident:

A worker climbed a large hickory tree to remove the top of the tree. After he cut one section off the top of the tree and was roping down a second section, the trunk of the tree he was working from snapped in half. This caused the worker and the entire top of the tree to fall approximately 65 feet to the ground, killing the worker. The employer could have prevented this incident by performing a preliminary examination of the tree before starting work. A thorough preliminary examination would have shown that the tree could not support the forces resulting from rigging and roping down cut tree sections.

Tree Care Work Hazard Prevention

- Assess the work site for all and falling object hazards – Assess the sloped ground where ladders or equipment will be used to prevent falls from equipment overturns and ladder slippage: nearby overhead objects or structures; and weather-related hazards.
- Determine if rigging is necessary and, if so, that workers can use it safely.
- Determine if workers will need to climb or use areal lifts. Make sure that ladders and lifts are securely positioned and in good condition.
- If workers cannot remain at least 010 feet from electric lines to perform tree care operations, contact the utility company to de-energize and ground the lines.

- Establish and mark drip zones with equipment, such as cones, where there is a hazard of objects falling.
- Ensure that all workers follow safety training procedures when entering the drop zone.
- Ensure that ground workers maintain a distance away from the tree-felling operations that is at least two times the height of the tree.
- When using a rope to fell a tree, workers must be at a distance of at least one-and-a-half times the height of the tree being felled.
- Establish a visual or audible communication system between overhead workers and workers on the ground before starting rigging operations for piecing out the tree. They system must effectively communicate when employees who are beneath overhead tree workers should stand clear of the drop zone, and when it is safe to approach a drop zone.
- Provide traffic and pedestrian traffic control around the jobsite prior to the start of the tree care operation.
- Have emergency procedures in place prior to the start of the tree care operation.

Tree Trimming Hazard Prevention

- Determine the felling direction and how to deal with forward lean, back lean, and/or side lean.
- Provide a retreat path so the logger can reach safety while the tree is falling.
- Determine the proper hinge size to safely guide the tree in it's fall.
- Look out for hazards and make sure you know where everyone is located.
- Always use proper PPE as recommended by the manufacturer
- Broken or hanging branches, attached vines, or a dead tree that is leaning.
- If you must cut a dead tree, be careful. The top could break off.
- If the tree is broken and under pressure, make sure you know which way the pressure is going. If not sure, make small cuts to release some of the pressure before cutting up the section.
- Be careful of young trees that other trees have fallen against. They act like spring poles and can propel back. (Many professional loggers have been hurt in this manner.)
- A tree may have not fallen completely to the ground and be lodged against another tree. Extreme care must be taken to safely be taken to safely bring the trees to the ground.
- If possible, avoid falling into other trees or objects. Don't turn your back on the tree as it fills and hide behind a standing tree if possible.
- As trees fall through other trees or objects, branches and objects may get thrown back towards logger.
- More people are killed while felling trees that during any other logging activity.

Cleanup Hazards – Floods

- Cleanup work of any kind is hazardous, but flood conditions make it even more so. Following the procedures listed below will help to keep you safe and healthy while cleaning up after natural disasters that involve flooding.
- Healthy tips – take frequent rest breaks when lifting heavy, water-laded objects. Avoid overexertion and practice good lifting techniques. To help prevent injury, use teams of two or more to move bulky objects; avoid lifting any materials that weigh more than 50 pounds per person, and use proper automated lifting assistance devices if practical.
- Be sure that a first aid kit is always available to disinfect any cuts or abrasions and wrap them in protective dressings.
- Use a wooden stick or pole to check flooded areas for pits, holes and protruding objects before entering.

- Conduct a preliminary worksite inspection before entering a flooded or formerly flooded building. Be sure all buildings have been examined and certified as safe before working around or in them.
- Have plenty of clean water available for eyewash and other first-aid treatments.
- Washouts, trenches, excavations, and gullies must be supported, or their stability verified prior to entry.
- All trenches should be supported (e.g. with a trench box); if no support is available, the trench must be sloped at the proper angles for the ground/soil type.
- Establish a plan for contacting medical personnel in the event of an emergency.
- Report any obvious hazards to appropriate authorities
- Use life vests when engaged in activities that could result in deep water exposure.
- Use extreme caution when handling containers holding unknown substances or known toxic substances.
- DO NOT use improvised surfaces (e.g., refrigerator racks) for cooking food or for boiling water to avoid exposure to heavy metals.
- Always wear watertight boots with a steel toe and insole, gloves, long pants, hard hat and safety glasses. Sneakers should not be warning because they will not prevent punctures, bites or crush injuries.

Working Safely Around Downed Electrical Wires

Electrical hazards exist in some form in nearly all occupations. However, those hazards multiply for workers involved in cleanup and recovery efforts following major disasters and weather emergencies. One particular life-threatening danger exists around downed and low-hanging electrical wires.

Safety First – above all else, always consider all equipment lines and conductors to be energized. Be cautious and if you notice downed wires or damaged electrical equipment, contact appropriate utility personnel. Remember that circuits do not always turn off when a power line falls into a tree or onto the ground. Even if they are not sparking or humming fallen power lines can kill you if you touch them or even the ground nearby.

Energy – Downed wires can energize other objects, including fences, water pipes, bushes and trees, buildings, telephone/CATV/fiber optic cables and other electric utilities. Even manhole castings and reinforcement bars (re/bar) in pavement can become energized by downed wires. During storms, wind-blown objects such as canopies, aluminum roofs, siding, sheds, etc., can also be energized by downed wires.

Back feed – When electrical conductors are inadvertently energized by other energy sources, back feed occurs. Some of those sources include: circuit ties/switch points, lightning, generators and downstream events Simply testing for energy sources is not sufficient since hazardous electrical events can happen without warning. Ensure that proper lockout/tagout procedures are always followed.

Rules to live by:

- Do NOT assume that a downed conductor is safe simply because it is on the ground or is not sparking.
- Do NOT assume that all coated, weather-proof or insulated wire is just telephone, television or fiber-optic cable.

- Low-hanging wires still have voltage potential even if they are not touching the ground. So, “don’t touch them.” Everything is energized until tested to be de-energized.
- Never go near a downed or fallen electric power line. Always assume that it is energized. Touching it can be fatal.
- Electricity can spread outward through the ground in a circular shape from the point of contact. As you move away from the center, large differences in voltages can be created.
- Never drive over downed power lines. Even if they are not energized, downed lines can become entangled in your equipment or vehicle.
- If contact is made with an energized power line while you are in a vehicle, remain calm and do not get our unless the vehicle is on fire. If possible, call for help.
- If you must exit any equipment because of fire or other safety reason try to jump completely clear, making sure that you do not touch the equipment and the ground at the same time. Land with both feet together and shuffle away in small steps to minimize the path of electric current and avoid electrical shock. Be careful to maintain our balance

Trenching and Excavation Safety

Two workers are killed every month in trench collapses. The employer must comply with the trenching and excavation requirements of 239 CFR 1926.651 and 1926.652 or comparable OSHA-approved state plan. An excavation is any man-made cut, cavity, trench, or depression in an earth surface formed by earth removal. Trench excavation means a narrow excavation (in relation to its length) made below the surface of the ground; in general, the depth is greater than the width.

Cave-ins pose the greatest risk and are much more likely than other excavation-related accidents to result in worker fatalities. Other potential hazards include falls, falling loads, hazardous atmospheres, and incidents involving mobile equipment. *One cubic yard of soil can weigh as much as a car. DO NOT enter an unprotected trench.

Trenches 5 feet deep or greater require a protective system unless the excavation is made entirely of stable rock. Trenches 20 feet deep or greater require that the protective system be designed by a registered professional engineer or be based on tabulated data prepared and/or approved by a registered professional engineer in accordance with 1926.652(b) and (c).

OSHA standards require that employers inspect trenches daily and as conditions change by a competent person before worker entry to ensure elimination of excavation hazards. A competent person is an individual who is capable of identifying existing and predictable hazards or working conditions that are hazardous, unsanitary, or dangerous to workers, soil types and protective systems required, and who is authorized to take prompt corrective measures to eliminate these hazards and conditions.

OSHA standards require safe access and egress to all excavations, including ladders, steps, ramps or other safe means of exit for employees working in trench excavations 4 feet or deeper. These devices must be located within 25 feet of all workers.

- Trenching and Excavation Safety
- Keep heavy equipment away from trench edges.
- Identify other sources that might affect trench stability.
- Keep excavated soil (spoils) and other materials at least 2 feet from trench edges.
- Know where underground utilities are located before digging.

- Test for atmospheric hazards such as low oxygen, hazardous fumes and toxic gases when greater than 4 feet deep.
- Inspect trenches at the start of each shift.
- Inspect trenches following a rainstorm or other water intrusion.
- Do not work under suspended or raised loads and materials.
- Inspect trenches after any occurrence that could have changed conditions in the trench.
- Ensure that personnel wear high visibility or other suitable clothing when exposed to vehicular traffic.

Trenching and Excavation Safety - Protective Systems

- Designing a protective system can be complex because you must consider many factors: soil classification, depth of cut, water content of soil, changes caused by weather or climate, surcharge loads (e.g., spoil, other materials to be used in the trench) and other operations in the vicinity.
- Benching – a method of protecting workers from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near vertical surfaces between levels. Benching cannot be done in Type C soil.
- Sloping – involves cutting back the trench wall at an angle inclined away from the excavation.
- Shoring – requires installing aluminum hydraulic or other types of supports to prevent soil movement and cave-ins.
- Shielding – protects workers by using trench boxes or other types of supports to prevent soil cave-ins.

DOCUMENTATION, REPORTING, AND RECONCILIATION

PROPRIETARY NOTICE

This document includes data that shall not be disclosed outside the Government, and shall not be duplicated, used, or disclosed in whole or in part for any purpose other than for evaluation of company capabilities in conjunction of any proposal or award, without consent from Southern Disaster Recovery (SDR).

Onsite monitoring of disaster debris during a recovery project is typically managed by a firm specializing in debris monitoring and tracking. Should an entity require self-monitoring by the debris recovery and removal contractor during a declared disaster, Southern Disaster Recovery (SDR) has access to a leading storm management software system, STORMadms™, which was designed to streamline debris tracking and ticketing. STORMadms™ applications and reporting work together to support overall management of a project, drive down costs, increase efficiency, and easily integrates with SDR's QuickBooks and Microsoft Office applications.

SDR's current electronic protocol for debris data management easily supports the importing of any data output from a Monitoring Firm's Automated Debris Management System (ADMS). The integration of our selected software choices provides intelligent, flexible, and accessible methodology to manage complex work.
In the absence of a Monitoring Firm's ADMS, SDR has a robust field documentation system that has proven its reliability as source documentation for FEMA and other federal funding program reimbursements.
SDR recognizes the importance of, and the details required, for documenting and reporting disaster recovery services throughout the entire recovery process. Our project management documentation process is built to exceed related federal guidance including:

- Archived Documents Include:
    - FEMA 321 Public Assistance Policy Digest
    - FEMA 322 Public Assistance Guide
    - FEMA 325 Public Assistance Debris Management Guide
    - FEMA 329 Debris Management Brochure
    - FEMA Disaster Assistance Policy

DOCUMENTATION, REPORTING, AND RECONCILIATION

- FEMA Stafford Act Section 316
- 44 CFR 10.8(d)(2) Determination of requirement for environmental reviews
- 44 CFR 206.44 Implementing CoBRA
- National Environmental Protection Act (NEPA)
- FHWA/ER Program - 23 CFR 668 Subpart A
- USACOE EM 385-1-1 Safety Guidance/Accident Prevention Plan

SDR structures our service delivery, plans/procedures, and training to ensure we conduct a disaster recovery project for the greatest federal government reimbursement to our client. Our plans and procedures include the field deployed, command center, and administrative tools to ensure proper documentation of the removal of eligible debris. Our protocols assure the entities to which we are contracted that their federal reimbursement will be fully maximized.

Our system is built upon:

- ✓ Proper certification of haul vehicles with entity signatures and approvals.
- ✓ Proper field documentation of each load hauled with identification of the particular certified vehicle, driver and location of eligible debris removed.
- ✓ Proper field documentation of each load disposed of (or reduced) with specific information concerning the disposal location and the safe, permitted operation of that disposal (or reduction site) location.
- ✓ Daily reports (including access to those reports) of the updated loads hauled database to ensure ongoing transparency and communication of work accomplished.
- ✓ Field documentation fully supported by detailed reports and up-to-date databases that describe eligible debris removed from eligible roadways.

Additionally, SDR's project management documentation process provides for positive identification and control of work on FHWA and other federal aid eligible roads.

Most jurisdictions anticipate receiving disaster recovery funding from various state and/or federal agencies, which necessitates strict adherence to established guidelines and the provision of required documentation. In addition, systems must validate the exact level of effort provided by the contractor in order to properly control and verify the work effort. To that end, SDR has established a catalog of forms and documentation, which successfully provides the required information for full reimbursement from the various funding agencies, as well as the essential documents to secure payment to the contractor.

The following pages detail SDR's forms and processes for each step of the project.

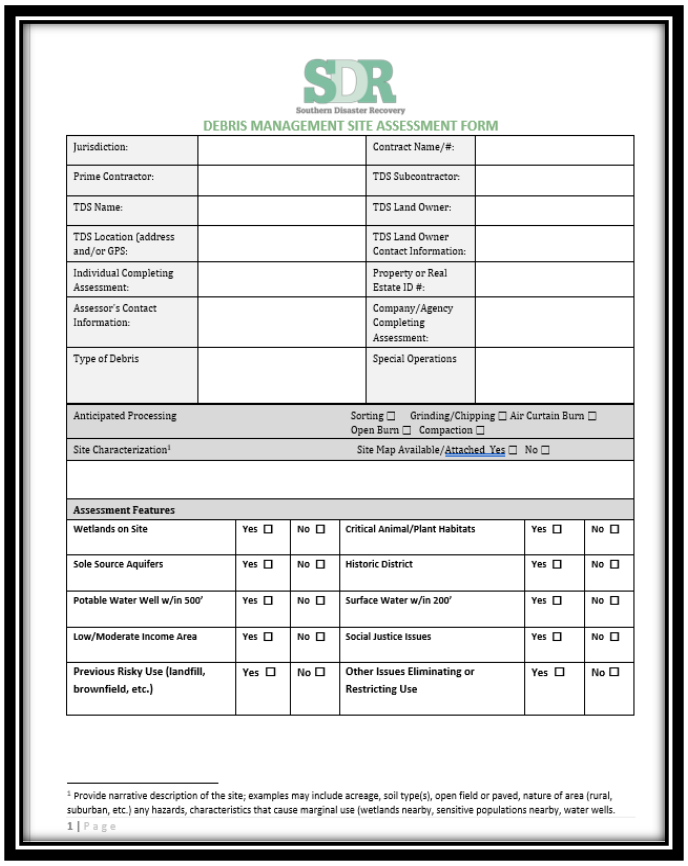
DEBRIS MANAGEMENT SITE ASSESSMENT FORM

Concurrently, during the 70-hour “push” or “cut and toss” phase, entity officials and SDR will be preparing for the debris removal phase of the operation. Typically, before the debris removal phase can start, Temporary Debris Management Sites (TDMS) must be established. The sample form below is designed to document the site assessment; gather information to complete any state and/or local permits; and, document the completion of the site as a TDMS.



Southern Disaster Recovery

***SDR DEBRIS MANAGEMENT SITE ASSESSMENT* (Document shown smaller than actual size)**

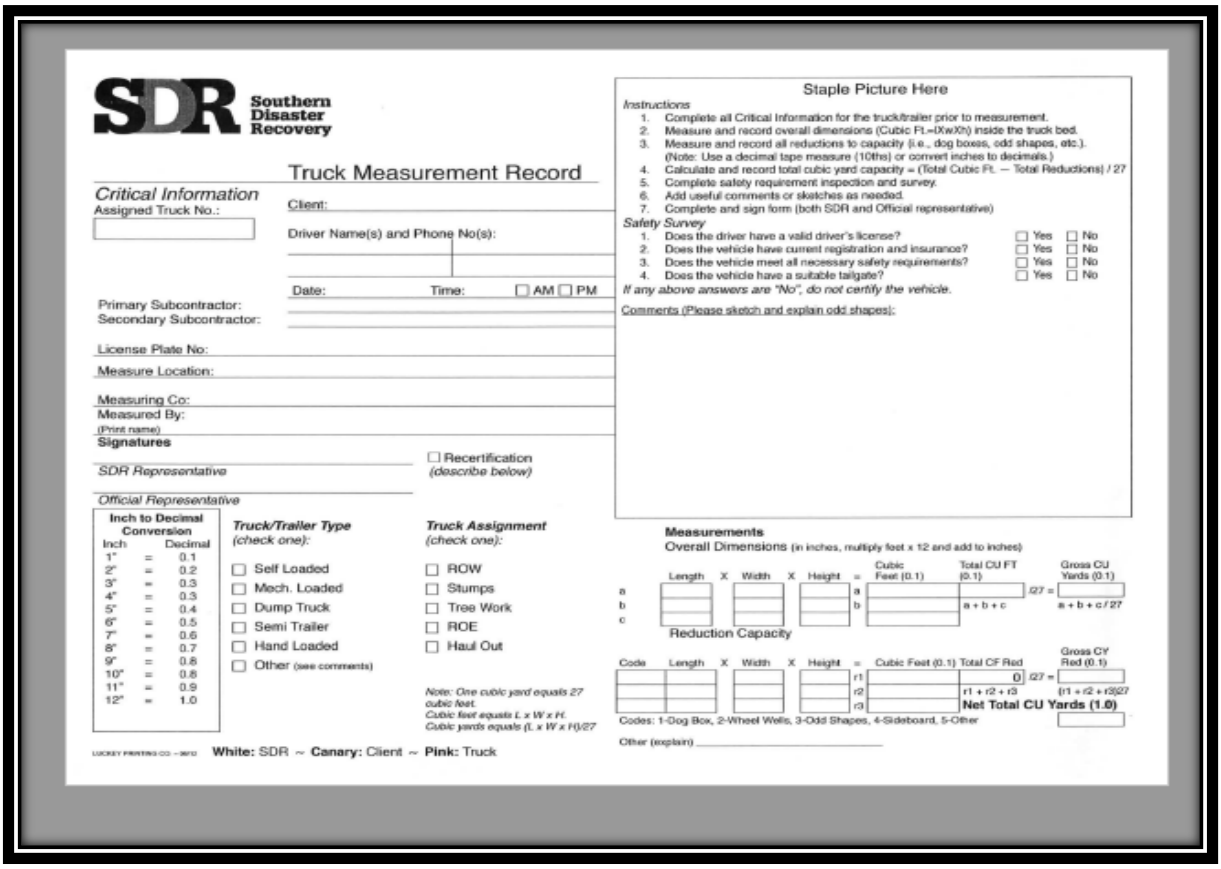
As TDMS’s are being constructed or modified per the permit requirements, the entity officials and SDR will certify trucks to prepare for the “load/haul” stage of disaster debris recovery/management.

THE REMAINDER OF THIS PAGE IS BLANK.

DOCUMENTATION, REPORTING, AND RECONCILIATION

TRUCK CERTIFICATION FORM

The *Truck Certification Form* documents that the truck and/or trailer is safe, properly licensed, insured, and operated by a licensed driver. The form also certifies the load carrying or volume capacity of the truck and/or trailer, which is a necessary component in determining the total load haul amount for use in the federal reimbursement and contractor compensation process.



SDR Southern Disaster Recovery

Truck Measurement Record

Critical Information
Assigned Truck No.:

Client:
Driver Name(s) and Phone No(s):
Date: Time: ☐ AM ☐ PM
Primary Subcontractor:
Secondary Subcontractor:
License Plate No:
Measure Location:
Measuring Co:
Measured By:
(Print name)
Signatures
SDR Representative
Official Representative
☐ Recertification (describe below)

Staple Picture Here

Instructions
1. Complete all Critical Information for the truck/trailer prior to measurement.
2. Measure and record overall dimensions (Cubic Ft.=(XwXh) inside the truck bed.
3. Measure and record all reductions to capacity (i.e., dog boxes, odd shapes, etc.). (Note: Use a decimal tape measure (10ths) or convert inches to decimals.)
4. Calculate and record total cubic yard capacity = (Total Cubic Ft. — Total Reductions) / 27
5. Complete safety requirement inspection and survey.
6. Add useful comments or sketches as needed.
7. Complete and sign form (both SDR and Official representative)

Safety Survey
1. Does the driver have a valid driver's license? ☐ Yes ☐ No
2. Does the vehicle have current registration and insurance? ☐ Yes ☐ No
3. Does the vehicle meet all necessary safety requirements? ☐ Yes ☐ No
4. Does the vehicle have a suitable tailgate? ☐ Yes ☐ No

If any above answers are "No", do not certify the vehicle.

Comments (Please sketch and explain odd shapes):

Inch to Decimal Conversion

Inch		Decimal
1"	=	0.1
2"	=	0.2
3"	=	0.3
4"	=	0.3
5"	=	0.4
6"	=	0.5
7"	=	0.6
8"	=	0.7
9"	=	0.8
10"	=	0.8
11"	=	0.9
12"	=	1.0

Truck/Trailer Type (check one):
☐ Self Loaded
☐ Mech. Loaded
☐ Dump Truck
☐ Semi Trailer
☐ Hand Loaded
☐ Other (see comments)

Truck Assignment (check one):
☐ ROW
☐ Stumps
☐ Tree Work
☐ ROE
☐ Haul Out

Note: One cubic yard equals 27 cubic feet.
Cubic feet equals L x W x H.
Cubic yards equals (L x W x H)/27

Measurements

LOAD TICKET

SDR's *Load Ticket* may also be utilized by the Client to record the debris collected and transported from rights-of-way to the designated disposal sites. SDR captures 15 key data points described in the Debris Management Guide (FEMA). The six-part load ticket allows all recovery participants to accurately maintain documentation of their billable activities during the recovery project.

Each week, or more frequently if deemed necessary by the severity of the storm, the load tickets used will be posted to a spreadsheet and/or database and electronically submitted to the Client.
The database includes the following information from each load ticket:

- Date
- Preprinted ticket number

DOCUMENTATION, REPORTING, AND RECONCILIATION

- Hauler's name
- Truck number
- Truck capacity in cubic yards
- Load percentage full, as assigned by the Client Representative in the tower
- Load amount in billable cubic yards
- Debris classification as burnable, non-burnable, mixed, other
- Point of origin for debris collection, time loaded and unloaded, including location of the temporary disposal site

DOCUMENTATION, REPORTING, AND RECONCILIATION

As demonstrated in the preceding example, the load ticket records all necessary identifying data to expedite data processing, compensation, and reimbursement.

The distribution of all ticket copies for the various type of debris will be determined by the contractor and the designated Project Officer.

Entity officials may authorize other debris recovery tasks during debris management for which the Load Ticket is not suitable. Specifically, leaners and hangers have unique documentation requirements.

LEANER/HANGER WORKSHEET

The *Hanger/Leaner Worksheet* documents the eligible work effort of the assigned crew in the field in a manner consistent with the FEMA Public Assistance Program and Policy.

DOCUMENTATION, REPORTING, AND RECONCILIATION

DATA VERIFICATION AND REPORTING

Just as in the Field Ticketing for Loads and Time/Material Tickets, the third-party independent monitor signature is an important validation for the County to document for disaster reimbursement purposes.

Following the collection of data in the field via Load Tickets or Leaner/Hanger Worksheets, all documents are entered into a spreadsheet for subsequent reports and invoicing. Entity officials and will receive daily reports and updates
that are integrated into the entity's situation reporting, enabling the production of any manner of report for daily briefings, weekly rollups, or work reconciliation. Reports are tailored to support the unique needs of each client.

In addition to the aforementioned forms, SDR may provide the following source documentation in conjunction with the entity's monitoring firm:

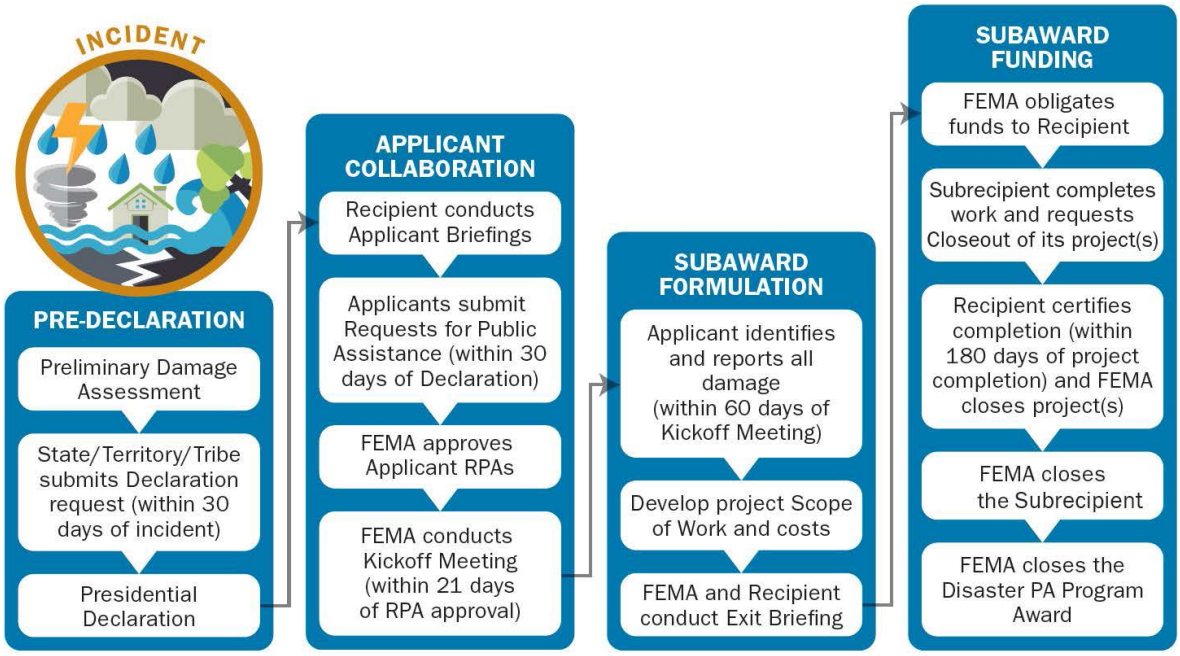
1. Monitored Time and Materials Tickets and Summary Spreadsheets
2. Debris estimate reports
3. TDMS
    a. Lease Agreement (if warranted)
    b. Property Owner Releases
    c. Pre-cleanup pictures of site
    d. Site Characterization Report; Soil samples
    e. State Environmental Agency Permit
4. Truck Certification Forms, Photos, Summary Spreadsheets
5. Daily Action Plan(s), Damage Reports, Customer Contact Reports
6. Monitored Load/Haul Tickets, Summary Spreadsheets, Daily Reports
7. Monitor Tower Log Sheets, Daily Reports
8. Monitor Tower Log Sheets, Monitored Haul Out Load Tickets/Tipping Tickets, Sales Receipts (if warranted); disposal locations permits/name, addresses, contact information
9. Monitor Geo-locate, Review/inspection prior to work
10. TDMS Closeout Report

THE REMAINDER OF THIS PAGE IS BLANK.

DOCUMENTATION, REPORTING, AND RECONCILIATION

FEMA PROGRAM ASSISTANCE COORDINATION

SDR's FEMA Program Director can set up and coordinate necessary meetings. The Program Director will meet with the entity to review and/or update existing information that may be required for FEMA reimbursement submittals, and detail item checklists required for each FEMA categories A and B.



SDR's Program Assistance will include the following:

- Coordination with the entity to submit an official request for State assistance and FEMA inspection.
- Local government representation: SDR can train and assist the entity's personnel with submittal forms for force labor accounts and equipment inventory data sheets.
- Evaluation of the entity's FEMA Project Worksheet (PW) for accurate scope of work and unit costs.
- Recovery process documentation: SDR can assist the entity in formulating a plan to process all daily logs, tickets from the field/contractor, and enter data of the recovery process. Perform daily and/or weekly ticket reconciliation, and final reconciliation of debris removal ticket ledgers and disposal ledgers (TDMS to final disposal), per FEMA requirements. Provide FEMA Category A submittals, including final inspection reports.
- Examination of project documentation for consistency, compliance, and completeness. Assist with submission of Requests for Payment, if necessary.
- Recommendations to entity representatives for reimbursement tasks.
- Negotiation assistance with state and/or federal entities, if needed. Verification of work-item tasks completion for FEMA Category A-B for contract closeout.

APPENDIX A, 44 C.F.R. PART 18 – CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure. The Contractor, Southern Disaster Recovery, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).
This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror non-responsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE PROPOSALS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a proposal received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie proposals will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the Workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the Workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the Workplace no later than five (5) days after such conviction.
5) Impose a sanction on or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free Workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SWORN STATEMENT UNDER SECTION 287.113(3)(a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

1. This sworn statement is submitted with Bid, Proposal or Contract No. RFP# 25-05-PW

   for THREE-YEAR PRE-POSITIONED CONTRACT FOR DISASTER DEBRIS MANAGEMENT SERVICES.

2. This sworn statement is submitted by Southern Disaster Recovery, LLC
   [name of entity submitting sworn statement]

   whose business address is 93 Sonia Drive, Greer SC 29650
   and (if applicable) its Federal Employer

   Identification Number (FEIN) is 45-5312400

   (If the entity has no FEIN, include the Social Security number of the individual signing this sworn statement:(_____.)

3. My name is Al McClaran and my relationship to
   [please print name of individual signing]

   the entity named above is CEO.

4. I understand that a "public entity crime" as defined in Paragraph 287.133(1)(g), Florida Statutes, means a violation of any state or federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy or material misrepresentation.

5. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crime, with or without an adjudication of guilt, in any federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, nonjury trial, or entry of a plea of guilty or nolo contendere.

I understand that an "affiliate" as defined in Paragraph 287.133(1)(a), Florida Statutes, means:

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

1. A predecessor or successor of a person convicted of a public entity crime, or

2. An entity under the control of any natural person who is active in the management of the entity and who has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in the management of an affiliate. The ownership by one person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's-length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

I understand that a "person" as defined in Paragraph 287.133(1)(e), Florida Statutes means any natural person or entity organized under the laws of any state or of the United States, with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

X Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, nor any affiliate of the entity, have been charged with and convicted of a public entity crime subsequent to July 1, 1989.

___ The entity submitting this sworn statement, or one or more of its officers, directors, executives, partners, shareholders, employees, members or agents who are active in the management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989, AND [Please indicate which additional statement applies.]

____ There has been a proceeding concerning the conviction before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer did not place the person or affiliate on the convicted vendor list. [Please attach a copy of the final order.]

THIS FORM MUST BE INCLUDED IN SUBMITTAL.

__The person or affiliate was placed on the convicted vendor list. There has been subsequent proceeding before a hearing officer of the State of Florida, Division of Administrative Hearings. The final order entered by the hearing officer determined that it was in the public interest to remove the person or affiliate from the convicted vendor list. [Please attach a copy of the final order.]

_____The person or affiliate has not been placed on the convicted vendor list. [Please describe any action taken by or pending with the Department of General Services.]

FEDERAL CONTRACT PROVISIONS COPELAND "ANTI-KICKBACK" ACT

(Reference: 2 CFR § 200 Appendix II(D), 29 CFR parts 3 & 5)

Contractor must comply with the requirements of the Copeland "Anti-Kickback" Act (18 USC 874 and 40 USC 3145), as supplemented by Department of Labor regulation 29 CFR part 3. Contractor and subcontractors are prohibited from inducing, by any means, any person employed on the project to give up any part of the compensation to which the employee is entitled. The Contractor and each Subcontractor must submit to the Owner, a weekly statement on the wages paid to each employee performing on covered work during the prior week. Owner must report any violations of the Act to the Federal Aviation Administration.

Re: RFP# 25-05-PW for Three-Year Pre-Positioned Contract for Disaster Debris Management Services

CrowderGulf is pleased to submit the enclosed proposal as a firm and irrevocable offer in response to the bid referenced above. We want to express our desire to enter into an agreement City of Destin for Disaster Debris and Management Services. We believe we are the best company to provide the City with the requested services based on our many years of experience and capabilities as synopsized below and demonstrated in the attached proposal.

CrowderGulf is a national full-service debris management firm with over fifty-five (55) years' experience helping communities like the City of Destin recover from disasters. Having successfully managed debris removal operations in sixteen (16) states, **including Florida**, we have developed one of the most capable recovery management teams in the Country. Our disaster experience includes the successful completion of **over six hundred (600) disaster recovery projects**, removing, reducing and disposing of **over four hundred twenty-five (425) million cubic yards of debris.** This is testament to our ability to meet the scope of work established by the City of Destin.

Highlights of Past Projects in Florida

- **2024 Hurricanes Milton & Helene $307,063,266 – 12,937,101Cubic Yards**
- 2023 APWA Award of Excellence
- 2022 Hurricanes Ian & Nicole – 44 Contracts Activated- 62 DMS Managed- $412,363,005 – 19,160,671 Total Cubic Yards
- 2018 Hurricane Michael (FL, GA) – 16 Activations - $252,281,133 Invoice Amount – 12,256,345 Total Event Cubic Yards
- 2017 Hurricane Irma – American Public Works Association – **2018 Contractor of the Year** (City of Punta Gorda, FL)
- 2017 Hurricanes Irma and Harvey – Completed 91 Activations across 3 States (FL, TX, GA)
- 2016 Hurricane Michael (SC, FL, VA, NC, GA) - 39 Contracts Activated - $82,267,725 Invoice Amount - 5,675,560 Total Event Cubic Yards

Recent Project Highlights

- **2024 Hurricanes Milton, Helene, Francine, Debby & Beryl & Straight-line winds (Activations in: FL, GA, NC, SC, LA, TX) - $261,202,800 – 13,768,701 Cubic Yards**
- 2023 Hurricane Idalia (FL), Tornados (AR & TX), Ice Storm (TX) - $32,431,478 - 1,910,145 Total Event Cubic Yards
- 2022 Hurricanes Ian & Nicole (FL) - $412,363,005 - 19,160.671 Total Event Cubic Yards
- 2020 Hurricanes Sally & Laura – 20 Contracts Activated (AL, FL, LA, TX) - $451,900,191 – 21,443,612 Total Event Cubic Yards (**includes special waterway and drainage lateral projects**)
- 2020 Tornado – 2 Activations (TN) - $12,292,233 Invoice Amount – 896,815 - Total Event Cubic Yards
- 2018 Hurricane Florence – 18 Activations (NC, SC) - $29,884,238 Invoice Amount – 1,862,022 Total Event Cubic Yards

CrowderGulf's management team includes previous FEMA Directors, Emergency Managers and qualified Debris Specialists with 55+ years of training and "boots on the ground" field experience. You will find our team fully knowledgeable in all aspects of debris removal, reduction, and disposal, from operational methodology to quality control and FEMA public assistance reimbursements. We recognize that an efficient, orderly and safe debris management operation can only be achieved by experienced on-site personnel. Our key management and field staff have obtained numerous FEMA and OSHA certifications in emergency management, safety and environmental compliance and remain with you from contract activation to closeout.

The knowledge and experience of the CrowderGulf management team, coupled with our personal inventory of heavy equipment and large cadre of dedicated subcontractors, has meant that every project has been completed successfully and within contract timelines. **Our team is dedicated to following the FEMA Public Assistance Program and Policy Guidelines and meeting 2 CFR requirements.** Our experience enables us to assemble uniquely trained and experienced project teams and match specialized equipment and resources with project execution requirements. We believe training and pre-planning are keys to a successful debris removal operation. CrowderGulf provides **pre-planning** and **training** to our clients **free of charge** throughout the contract term.

CrowderGulf is committed to responding to any event in the City regardless of size or type, with utmost promptness. **Don Madio, Florida Regional Director**, is a long time Florida resident and has significant first-hand experience working disaster declarations within the State of Florida. He recently managed multiple contracts after Hurricanes Helene, and Milton devastated the State. In addition, **Joe Hayes, Project Manager and Regional Manager,** has been assigned to meet the needs and requests of the **City** throughout the year. Both he and Don can provide valuable knowledge and experience with an inherent commitment and dedication to the City. Don Madio can be reached at 813-285-8749 or dmadio@crowdergulf.com and Joe Hayes can be reached at jhayes@crowdergulf.com. You may also contact the CrowderGulf Disaster Assistance office at 1-800-992-6207.

Financial strength is one of the most important aspects for the City of Destin to consider when selecting a debris contractor. Following a major disaster, the City's financial burdens could be substantial. It is important to have a financially strong disaster-experienced contractor, such as CrowderGulf, that will work to get the job completed, regardless of any delays in invoice payments.

CrowderGulf's financial stability is solid and reliable and over the years we have established an excellent line of credit with our financial institution. We have always paid our subcontractors and personnel weekly. This ensures that we can provide the very best subcontractors for the City and that we are able to secure additional qualified subcontractors to fulfill any concurrent contracts. CrowderGulf has always met all financial obligations without interruption.

AGGREGATE BONDING CAPACITY	**$ 1,000,000,000**
SINGLE BONDING CAPACITY	**$ 250,000,000**
OTHER AVAILABLE FUNDING	**$ 150,000,000**

CrowderGulf maintains ***all required insurances*** such as General Liability, Personal Injury, Workers Compensation, Automobile/Equipment Liability, as well as Maritime Insurance. Additional information regarding insurance has been presented with our proposal response.

CrowderGulf has encountered and successfully handled everything within the City's Scope of Work identified in the RFP. This includes removal of eligible disaster-related vegetation, construction & demolition (C&D), hazardous waste, white goods, e-goods, stump removal, marine debris removal, debris reduction and disposal etc. Details of our abilities are summarized in our Past Performance in the attached proposal.

Our Disaster Management Services include the following:

Pre Planning and Training	Waterway Debris Removal	Demolition
Emergency Road Clearance	Marine Salvage	Dredging
ROW &ROW Debris Removal	Bio-Mass Recycling	Portable Housing
Development & Operation of DMS	Derelict Vehicle and Abandoned Vehicle Removal	Levee Construction
Final Debris Disposal	Removal & Disposal of White Goods & E-Goods	Sonar Scanning
Hazardous Materials Handling	Tree Trimming and Removal (leaners /hangers)	Marine Construction
Technical Disaster Recovery Assistance	Sand Removal, Screening & Breach Restoration	Cellular Tower Construction
Historic Property Preservation	Temporary Ice, Water and Other Consumables	Road and Utility Work
Bulkhead and Pier Replacement Pile Driving	Temporary Power Services/Generators	Land Clearing and Site Prep

We greatly appreciate the opportunity to submit this proposal. **We assure you that our professional disaster debris team will exceed the expectations of the City**. We will be pleased to provide any additional information that would assist the City of Destin in its deliberations and look forward to your favorable response.

As the President of CrowderGulf, I attest that this proposal is presented in fairness and in good faith without collusion or fraud and I, Ashley Ramsay-Naile, have the authority to bind CrowderGulf in all transactions relative to the award of **Disaster Debris Management Services** In addition, Reid Loper, Senior Vice President, also has the authority to bind the company.

Best Regards,

Ashley Ramsay-Naile, President
jramsay@crowdergulf.com / knoll@crowdergulf.com

Qualifications of CrowderGulf

CrowderGulf At-A-Glance

CrowderGulf is a leading disaster debris management and response company with over 55 years of successful experience in debris management, removal, and disposal services. We utilize the best management practices to reduce risk, enhance productivity, and provide cost effective project delivery to all clients. CrowderGulf manages a self-sustaining, well-organized, efficient operation during all contract activations.

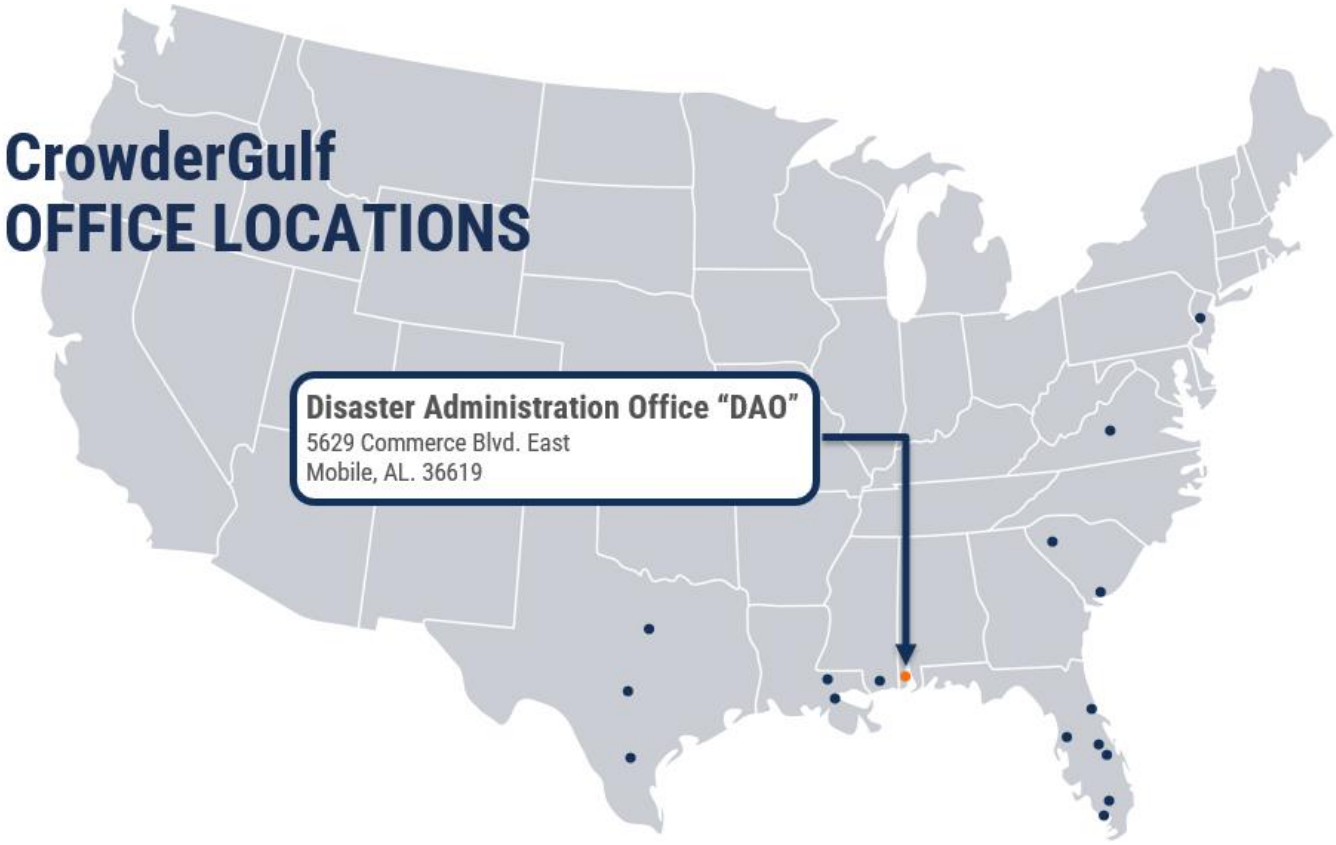
- **Bases of Operation:**

Primary — **Mobile, Alabama**

Satellite Offices — Palm Harbor, West Palm Beach, Winter Garden, Wellington, New Smyrna Beach, Miami, **Florida**
D'Iberville, Mississippi
Robbinsville, New Jersey
New Orleans, Baton Rouge, Louisiana
Hilton Head Island, Laurens, South Carolina
Denton, Portland, and Austin, Texas
Richmond, Virginia

- **Never failed to complete** all contract obligations and never defaulted on a contract.
- Committed to the **same highly skilled qualified Project Management Team remaining with the project** from start to finish.
- Large cadre of management personnel with extensive disaster debris training and experience.
- **Completed simultaneous** debris projects after all major hurricanes **since 1969.**
- Successfully completed over **600 FEMA funded** disaster recovery projects.
- Effectively removed, managed and disposed of over **425 million cubic yards of debris.**
- Industry leader in **waterway debris removal**, including work from New Jersey to Texas.
- Fully committed to using local citizens and qualified local subcontractors to the maximum extent, including Minority Business Enterprise (MBE) owners.
- **No lawsuits, liens or judgments by clients ever** filed or pending and no bankruptcy proceedings filed or pending.
- **No lawsuits, liens or judgments by CrowderGulf** to clients **ever** filed.
- Over **$150 million** of company-owned/leased equipment available for rapid response.
- Experienced in always providing unlimited support and accurate FEMA compliant documentation to ensure that no clients are denied reimbursement.
- CrowderGulf offers a well-developed, adaptable, and proven Debris Management Plan that is reviewed and revised after every event.
- Quality Control always maintained to reinforce the "Clean as You Go" policy for debris removal.
- Technical advice and training available to all clients throughout the contract term, at no cost to client.
- Significant financial strength:

AGGREGATE BONDING CAPACITY	**$ 1,000,000,000**
SINGLE BONDING CAPACITY	**$ 250,000,000**
OTHER AVAILABLE FUNDING	**$ 150,000,000**



"Despite the inevitable challenges of managing a disaster, every contact I made with Crowder Gulf consistently went above and beyond. They promptly addressed every phone call and concern, and our professional relationship has led to multiple referrals to other organizations. Every member of Crowder Gulf has made a lasting impact on our city."

Jamie Praslicka
Emergency Management Coordinator
City of Angleton, TX (Hurricane Beryl – 2024)

CROWDER GULF

Tab 3 - Experience & Ability

City of Destin, FL

RFP # 25-05-PW for Disaster Debris Management Services

TAB 3 – Experience and Ability

Over Fifty-five Years of Debris Management Experience

CrowderGulf is a national full-service debris management company, with over **fifty-five years** of experience throughout the United States, helping communities, like the City of Destin, recover from disasters as rapidly and efficiently as possible. The roots of the company began in 1969, from the work of John and Woodie Ramsay, brothers, and recent graduates of Auburn University. They grew up truck farming in south Mobile County, AL, less than 10 miles from the Mississippi State line. When Hurricane Camille devastated the Mississippi Gulf Coast in 1969, the Ramsay brothers joined forces with local contractors to clean up Biloxi, MS, and much of the Gulf Coast.

In 1984, as the brothers' work branched out into other areas, they began doing business as Gulf Equipment Corporation, as an Alabama General Contractor licensed in seven Southeastern states. Based on the work generated, they developed three divisions in Gulf Equipment: tower erection, construction, and disaster debris management.

In 2002, CrowderGulf was formally created by John Ramsay, as an independent disaster debris management company. John's honesty, reliability, and respect for all clients, along with his extensive knowledge and experience in disaster debris cleanup, were key to the strong qualified team that he built over the years. Today, **Ashley Ramsay-Naile**, John's oldest daughter, is president of CrowderGulf. Ashley continues to build a strong, qualified team, using her years of experience and excellent management skills to grow and improve the Company.

During the last five decades, the Company has managed over **600 disaster recovery projects in 16 states and has successfully removed, reduced and disposed of over 425 million cubic yards of debris.** CrowderGulf's current and past performance, as highlighted in this proposal, demonstrates our expertise in successfully completing multiple contracts simultaneously, regardless of their locations or the amount of damage.

CrowderGulf has responded to numerous natural and man-made disasters that activated hundreds of contracts, each involving its own unique challenges and circumstances. Having performed debris management operations across the United States, CrowderGulf has encountered and successfully handled everything within the City's Scope of Work identified in this RFP. We are committed to completing every project in a minimum amount of time and in a safe, orderly, and practical manner. CrowderGulf contracts have involved disaster debris work in all eligible areas identified in FEMA's Public Assistance Program, Category A. The confidence that we can deliver services to the City effectively and efficiently is bred from our past successes.

All disaster management work is completed in full regulatory compliance with all local, state and federal agencies involved in disaster recovery, including the Federal Emergency Management Agency (FEMA), the Federal Highway Administration (FHWA), the Environmental Protection Agency (EPA), the Florida Department of Environmental Management (FDEP), the Florida Department of Health and the Florida Department of Transportation (FDOT). This commitment to regulatory detail has earned CrowderGulf a reputation as a company of integrity, dependability and reliability.

CrowderGulf is committed to working as a team with City personnel to facilitate the pre-planning that will ensure a smooth debris removal operation in the event of a disaster. We can assist in preparing and updating Debris Management, Emergency Operations and Mitigation Plans. In addition, CrowderGulf will provide preparedness training designed specifically to meet the needs of the City. **Our training and technical advice are provided free of charge throughout the contract term.**

The CrowderGulf Staff will provide the City of Destin with priority service, quality performance and expert on-site management. The combination of CrowderGulf's human resources, extensive equipment inventory, financial capacity and experienced subcontracting teams, allows the company to honor all contractual commitments with dispatch and efficiency, regardless of geographic location or size of disaster. The depth of these integrated components will also allow CrowderGulf to respond to those special needs of the City that may not have been considered in the pre-event contract.

CrowderGulf Services Available to the City

CrowderGulf has a detailed and strategic plan tailored to meet the needs and specific requirements of the City. The services provided will consist of furnishing all labor, materials, and equipment to complete and deliver full Emergency Response and Recovery Services. CrowderGulf can offer the City the widest possible spectrum of debris management and disaster recovery services which are itemized below:

Pre-Planning & Training

Annual pre-disaster debris management planning sessions include training, review of emergency management plans, Debris Management Site (DMS) selection and other disaster recovery components.

Aerial Damage Assessment via Helicopter Flyover

After a storm has impacted a large area, CrowderGulf often implements the use of a **helicopter flyover** with local officials, to assess the damage. This allows our team to prioritize which areas may need assistance sooner than others based on severity of damage, as well as see progress once work starts.

Emergency Road Clearance "PUSH"

CrowderGulf provides push services by making certain that roadways designated by the City are clear and passable within 70 working hours from issuance of a Notice to Proceed (NTP) with such clearance.

Right of Way (ROW) Debris Removal

CrowderGulf performs permitting, clearing, and removing FEMA eligible disaster debris from the public rights-of-way, streets, roads, canals, lakes, ponds, and waterways as directed by the City. Each load of debris is accurately recorded electronically or on load tickets and presented to the City daily along with requested daily and weekly production reports.

Private Property Debris Removal (PPDR)

When requested, permitted, and approved by FEMA, State or Local Government CrowderGulf can conduct debris removal operations from private property. Debris must eliminate the immediate threat to lives, public health, and safety; and must be a result of the declared incident and within the designated area. Each load of debris is accurately recorded electronically or on load tickets and presented to the City daily along with requested daily and weekly production reports.

Development and Operation of Temporary Debris Management Sites (TDMS)

CrowderGulf constructs TDMS to handle the volume of debris generated in the City by the disaster. Operation of the TDMS includes debris separation, reduction, recycling and staging, separating and disposal of hazardous waste and fluids. TDMS are fully restored to original condition after project completion. CrowderGulf can also assist in selecting and identifying appropriate TDMS locations and provide site specific operational plans.

Final Debris Disposal

CrowderGulf disposes of all debris, including reduced debris, in accordance with all applicable federal, state and local laws, standards and regulations. At the City's request, tipping fees associated with final disposal facilities can be paid by CrowderGulf and back billed to the City as a pass-through cost.

Stump Removal

All stump removal will be conducted following all FEMA Public Assistance Program and Policy Guidelines. Stumps left on the rights-of-way will be hauled as regular vegetative debris. Only hazardous stumps that meet FEMA stump requirements will be removed upon FEMA approval. Complete documentation will be collected before and after the extraction.

Tree Trimming & Removal (Leaners and Hangers)

CrowderGulf performs tree trimming and removal in accordance with American National Standard ANSI A300. Other tasks also associated with tree trimming are tree topping, stump grinding, grubbing, clearing, hauling and disposal of trees to abate imminent and/or significant threats to public health and safety. All tree work is directed by the City and a FEMA representative. CrowderGulf has certified arborists to assist the City with tree trimming and removal.

Arborist Program

Understanding the dynamics of tree growth and health is pivotal in fostering resilient tree canopies, particularly in the face of natural disasters such as high wind events and tropical systems. Mismanaged tree canopies not only escalate debris generation post-disaster but also increases the threat to public health and safety. At CrowderGulf, we recognize the significance of arboriculture in disaster recovery efforts. Building upon our longstanding provision of arborist services post-storm disaster, we have expanded our program to include pre-storm disaster arborist services aimed at proactive canopy management within the framework of contemporary arboriculture standards.

In-House Arborist:

CrowderGulf provides an in-house arborist who works closely with our safety team, ensuring adherence to arboriculture and safety protocols across all CG projects. This expert not only oversees tree crews but also provides invaluable guidance to Project Managers (PMs) on safeguarding undamaged trees, prioritizing high-value trees to minimize additional damage, and managing arboriculture procedures aligned with FEMA reimbursement criteria. Moreover, our arborist team possesses utility training, equipping them to address concerns regarding right-of-way access and usage, including complexities arising from interactions with various utility companies within the canopy's vicinity.

Demolition

CrowderGulf provides demolition services and removal of condemned structures and buildings that pose a threat to public health and safety. All demolition services requested will commence with safety and regulatory requirements in place and all local, state and federal requirements are met.

Derelict Vehicle and Vessel Removal

CrowderGulf can perform all aspects of vessel and vehicle removal from land or water. Also offered is assistance with ownership records and contact verification procedures. If needed, a storage site is established, maintained and managed for the vessel and/or vehicle holding, as may be required by law. Documentation is kept on all stages of the removal of each vessel and vehicle from collection to final disposal.

Removal & Disposal of White Goods & E-Waste

CrowderGulf is experienced in the special handling of white goods (refrigerators, stoves, ac units, etc.) and e-goods (electronic equipment). All regulations on the proper disposal of hazardous fluids removal are followed.

Waterway Debris Removal & Shoreline Restoration

CrowderGulf has completed numerous projects throughout the Southeast removing marine debris from storm water drainage ditches to large rivers and canal systems. Removal of debris from the rivers and canals can require the use of shallow draft boats and barges equipped with knuckle-booms or track-hoes with debris grapples. In shallow water areas with limited access and in extremely sensitive areas, the debris is removed by hand labor. CrowderGulf has also completed earthen-fill repairs and restoration as well as armored shorelines consisting of ripraps, (both stone and recycled concrete). CrowderGulf also has the capabilities and experience installing gabions, geo-web products and various types of bulkheads and retaining walls.

Sonar Scanning

CrowderGulf has conducted numerous large scale operations utilizing sonar imagery and underwater video and photography. Sonar scanning is a technological and efficient way to locate and remove sunken marine debris from waterways.

Technical Disaster Recovery Assistance

CrowderGulf can aid with all aspects of the Public Assistance Program including damage survey reports, project worksheets, documentation support and consultations/negotiation services and any other technical assistance needed.

Other Services CrowderGulf is Experienced in, but not limited to:

Household Hazardous Waste (HHW)
Levee Construction
Park Restoration
Land Clearing and Site Preparation
Road and Utility Work
Marine Salvage
Marine Construction
Bulkhead and Pier Replacement
Portable Housing
Cellular Tower Construction
Temporary Ice, Water and Other Consumables
Hazardous Materials Handling
Road and Utility Work
Historic Property Preservation
Temporary Power Services/Generators
Dredging
Pile Driving
Bio-Mass Recycling
Wetlands Restoration
Sand Screening

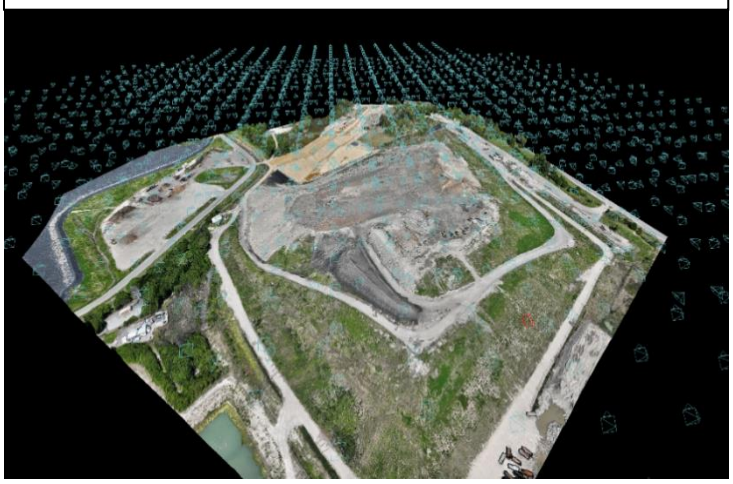
Drone Capabilities

CrowderGulf utilizes cutting-edge drone technology, integrated with advanced mapping and analysis software, and enhances precision with GNSS survey receivers equipped with Real-Time Kinematic (RTK) technology. This comprehensive suite of tools is pivotal in our debris management operations, including on city owned properties, private properties, linear utility easements, and public rights of way, ensuring that our documentation meets the stringent accuracy and compliance standards required for FEMA reimbursement.

Benefits of Drone Technology:

- High Resolution Aerial Maps of DMS or Affected Area
- Debris Estimation
- Damage Assessments
- 3D Models
- Waterway/Easement Mapping, Assessments and Surveys
- High-Definition Video
- Live Stream Video for Emergency Operations Center (EOC) or other meetings
- Site/Project Documentation
- Historical Documentation
- Environmental Impact Surveys
- Allows for effective distribution of information to the public showing the scope of the project.
- Training
- Public Messaging Deliverables
- More cost effective than traditional aerial platforms
- Can be deployed quickly in the most austere environments with little support.

3D Modeling of PDR Assessment



Contract Management - Ability to Execute Concurrent Contracts Across Multiple Regions

CrowderGulf has a proven history of simultaneously managing multiple contracts, fluctuating workloads and many specialty debris projects such as waterway debris removal and demolition. CrowderGulf has at its disposal an extensive inventory of company-owned equipment coupled with a large pool of dedicated subcontractors to complete any project, large or small. Most importantly, our full-time, disaster-experienced management teams are committed to serving all clients with integrity, promptness and reliability.

The Summary Table below provides a snapshot of CrowderGulf's relevant disaster work experience. It reflects the Company's ability to successfully complete multiple simultaneous disaster projects by providing the personnel and equipment resources needed, regardless of size, location, number of active projects, or the nature and severity of the disaster. Over 98% of the 615 disaster projects listed in the table below were the result of pre-event contracts that were activated after a disaster and were FEMA reimbursable projects. Throughout our many years in business, **CrowderGulf has always successfully provided every Client with all the detailed, accurate and timely documentation required by FEMA to receive reimbursement.**

SUMMARY TABLE OF SIMULTANEOUS DISASTER DEBRIS PROJECTS

Year	Hurricanes & Storm Disasters	Simultaneous Contract Activations	# of DMS Managed	Invoice Amt	Approx. Cubic Yards (CY)
2024	Hurricanes Milton, Helene, Francine, Beryl, Debby, & Straight Line Winds, Severe Storms	80	117	$352,230,154	16,181,699
2023	Hurricane Idalia; Ice Storm, Tornados,	19	8	$34,270,393	2,003,207
2022	Hurricanes Ian & Nicole, Severe Storms	45	82	$413,321,806	19,454,567
2021	Hurricanes Ida, Nicholas; Tornados, Storms	25	26	$56,594,407	2,772,654
2020	Hurricanes Laura, Sally, Zeta; Tropical Storm (TS) Cristobal, Hanna, Tornados	39	91	$572,126,410	32,237,626
2019	Hurricane Dorian, TS Imelda, Tornado,	7	4	$4,558,359	169,827
2018	Hurricanes Florence & Michael, Red Tide	40	56	$284,507,351	19,311,887
2017	Hurricanes Irma, Harvey, Nate, TS Cindy	98	144	$298,172,017	18,559,759
2016	Hurricanes Hermine & Matthew; Severe Storms, Flooding, Tornado	53	36	$100,501,633	6,725,538
2015	Severe Storms, (Flood & Tornados)	10	0	$2,311,844	109,578
2014	Ice Storms Pax & Ulysses, Severe Storms	14	5	$9,866,559	669,314
2012	Hurricanes Isaac & Sandy	13	4	$60,627,670	972,993
2011	Hurricane Irene	31	13	$14,754,641	1,673,821
2008	Hurricane Ike	36	27	$178,318,425	16,933,904
2005	Hurricanes Dennis, Katrina, Rita, Wilma	69	41	$281,418,949	19,441,656
2004	Hurricanes Charley, Frances, Ivan, Jeanne	36	61	$292,426,233	16,800,678
2003	Hurricane Isabel	16	19	$66,344,733	5,447,815

Past Performance and Experience

For all activations, CrowderGulf Management teams have been led by highly qualified, disaster-experienced, knowledgeable personnel. These individuals are well-versed in FEMA regulations, including eligible work, funding and reimbursement requirements. Several of CrowderGulf's personnel have held emergency management positions both locally, as well as state and federal positions. These individuals provide updates and training to CrowderGulf staff on a regular basis. Details of personnel qualifications are provided in the **Key Personnel Section** of this proposal. CrowderGulf's ability to successfully manage multiple contracts, within client timelines and FEMA guidelines, is highlighted in the following excerpts of experience following major natural disasters. A Summary Chart is included at the end of each year's work that shows the varied scopes of work that were completed.

2024 Straight-Line Wind. Hurricane Beryl, Hurricane Debby

Hurricane Season in 2024 was very active along both the Gulf Coast and the East Coast. Five hurricanes made landfall in the U. S.: three in Florida, one in Texas, and one in Louisiana. Over 350 lives were lost and according to FEMA the cost of more than $90 billion. The second storm of the season, on July 8, 2024, was Hurricane Beryl. It made landfall along the Southeast Texas Coast as a re-intensified Hurricane 1. The Texas coast suffered extensive flooding and wind damage with Brazoria County being affected by the east side of the eyewall. There was widespread damage from downed trees and power lines, with flooding and infrastructure damage occurring throughout numerous other coastal communities as well as many communities further inland in the Houston region.

Prior to Beryl coming ashore in Texas, CrowderGulf's operational team was pre-staged near our clients to immediately begin assisting them with their needs. One day after landfall, on July 9, 2024, CrowderGulf was activated to provide push crews to the City of Angleton for emergency clearing of priority roads. City and County governments received mounting pressure from state and federal officials (FEMA) to help provide a complete picture of the statewide damage based on their damage assessments.

CrowderGulf assisted clients with this task by mobilizing multiple assessment crews which coordinated with each of our clients to provide individualized debris removal quantity and cost estimates and develop specific debris removal timelines. While CrowderGulf teams were developing debris estimates, simultaneously, other team members worked with Clients to identify, permit and develop Temporary Debris Management Sites (TDMS) throughout the damaged areas. By the end of the first week after Beryl's destructive path, CrowderGulf had been activated by 20 Clients (municipalities and counties) and crews were removing debris from the rights-of-ways. CrowderGulf developed and managed nineteen (19) Temporary Debris Management Sites (TDMS) to reduce the debris produced by Hurricane Beryl.

On September 26th, Hurricane Helene, a Category 4 storm made landfall. More than 230 people were killed from this violent storm's devastation across Florida, Georgia, South Carolina, North Carolia, Virginia and Tennessee. CrowderGulf responded to 16 client activations resulting in the removal of 1.2 million Cubic Yards of debris. Two weeks into the cleanup efforts for Hurricane Helene, Hurricane Milton made landfall on the eastern side of the Gulf of Mexico at Siesta Key, Florida. This powerful category 3 hurricane resulted in 32 client activations. CrowderGulf removed over 3.5 million cubic yards of debris with project totals reaching over 100 million dollars for the debris removal and recovery work.

2024 Straight-Line Winds, Hurricane Beryl, Hurricane Debby, Hurricane Helene, Hurricane Milton

2022 Hurricanes Ian and Nicole

- **Hurricane Ian Impact**: Hurricane Ian made landfall on September 28, 2022, in Southwest Florida, near Fort Myers, as a strong Category 4 storm. Ian is currently estimated to be the costliest storm in Florida's history. The Town of Fort Myers Beach, City of Sanibel, and Lee County suffered catastrophic damage. Widespread wind and flood damage occurred throughout the impacted areas and severe storm surge damage in the beach towns and communities within Lee County.

- **Immediate Response**: As the day broke and Ian's winds had weakened, the devastation was unimaginable. One of the first things reported to the team was the destruction of the Sanibel Causeway, cutting the City of Sanibel off from the mainland. CrowderGulf immediately recognized the need to set up barging for the City. We coordinated with the City and mobilized barges the following day. On October 1, 2022, just three days after Ian's landfall, CrowderGulf got the first barge on the scene.

- **Barge Operations**: Barge operations involving five large barges supplied by CrowderGulf, supported transporting fire, police, EMC, power companies to the island for approximately three weeks.

- **Emergency PUSH Operations:** In the first hours after Hurricane Ian's devastation, while barge operations were being set up for Sanibel, CrowderGulf was also performing emergency PUSH operations in Lee County, Fort Myers, Fort Myers Beach, Estero, and Bonita Springs. All combined, CrowderGulf had approximately 200 PUSH crews operating within the State of Florida.

- **Full-scale Operations**: While PUSH crews cleared roads, other CrowderGulf crews developed 63 Temporary Debris Management Sites (TDMS) throughout the damaged areas to start receiving debris. CrowderGulf began hauling debris from the ROW to TDMS just three days after landfall. Within Unincorporated Lee County, CrowderGulf achieved a maximum daily production of 107,000 cubic yards per day, resulting in over **8 million** cubic yards being removed. Response-wide in the State of Florida for Hurricane Ian, CrowderGulf reached a maximum daily production of 194,000 cubic yards per day, resulting in more than 17 million cubic yards of debris being removed.

2021 Hurricanes Ida and Nicholas

On August 29, 2021, Hurricane Ida impacted much of coastal Louisiana, including St. John the Baptist Parish. With hurricane force winds more than 150-mph, Ida was a deadly and destructive Category 4 Atlantic hurricane that became one of the most damaging hurricanes to make landfall in the state of Louisiana.

CrowderGulf held a pre-event contract with St. John the Baptist Parish and as soon as the Parish came into the cone of uncertainty, CrowderGulf's contracts manager, Wes Naile, was in contact to discuss the possibility of the issuance of a Notice to Proceed (NTP). On September 7, 2021, in the immediate aftermath of Ida, as soon as it was deemed safe and a NTP was issued by the Parish, our Director of Operations was on the ground doing damage assessment.

CrowderGulf's Management team immediately mobilized all personnel, support equipment, and assets for the initial PUSH on all essential roadways. Simultaneously, resources were mobilizing for the Rights-of-Way (ROW) debris removal. Three Debris Management Sites (DMS) were immediately developed to accept incoming storm debris. This project activated approximately 30 self-loading grapple trucks as well as several wheel loaders, skid-steers and other supporting equipment required to perform all necessary actions. After six months, the final pass was initiated, and the debris removal portion of the Parish project was completed on May 15, 2022.

On March 4, 2022, the Parish activated CrowderGulf to begin debris removal operations in waterways, drainage laterals and ditches. The CrowderGulf Team removed and disposed of over **79,000 cubic yards** of debris, and the contract remains open for future work with laterals and ditches.

2020 Hurricanes Laura and Sally, Tornados

In 2020, CrowderGulf responded to nine major disasters with 34 contract activations in six different states. CrowderGulf developed and managed 49 Debris Management Sites (DMS) during activations. These debris activations were conducted simultaneously with multiple missions occurring within and across regions. The most notable aspect of the 2020 storm season was the consistent daily production rate by CrowderGulf's debris crews. During the first 60 days after Hurricanes Laura and Sally, CrowderGulf removed over 12 million cubic yards of debris from the ROW. This consistent daily production of over 204,000 cubic yards of debris per day demonstrated CrowderGulf's unparalleled capabilities. Moreover, these productions were achieved without sacrificing safety, quality, cost or schedule. All of this was made possible by having qualified, disaster-experienced key management personnel and subcontractors, effective sectoring, and an efficient staffing approach.

Hurricane Laura made landfall near Cameron, LA, on August 27, 2020, as a Category 4 Hurricane with peak sustained winds of over 150 mph. Within a few hours after the dangerous winds passed, the CrowderGulf Team was on the ground in Calcasieu Parish and the cities of Lake Charles, Sulphur, Dequincy, Vinton, Westlake and Iowa. CrowderGulf executed the pre-storm response plans and immediately began debris assessment and removal operations.

Due to the widespread destruction, CrowderGulf dispatched over 500 Emergency Road Clearance crews (aka Push Teams) to clear the roads for emergency vehicles to access the citizens in need. Simultaneously with the Emergency Road Clearance operation, the CrowderGulf Management Team located, leased, permitted and developed 16 Debris Management Sites (DMS) to store and reduce the hurricane generated debris.

Overall, CrowderGulf had 34 activations removed, reduced and disposed of over 19 million cubic yards of hurricane generated debris from the ROW. In addition to PUSH operations, ROW hauling, tree work and disposal operations, CrowderGulf also worked within Calcasieu Parish to remove debris from over 1,600 miles of drainage laterals throughout the Parish. As a result, over 2.2 million cubic yards of debris have been removed and disposed of from the ditches and waterways within the Parish.

2019 Hurricane Dorian, TS Imelda, Tornado, Misc. Projects

Dorian, a Category 5 hurricane, left a devastating path of destruction before making landfall in Cape Hatteras as a Category 2 storm. On its journey along the eastern US coastline, Dorian skirted the South Carolina coastline with tropical storm force winds and torrential rains resulting in the activation of two CrowderGulf debris removal contracts. Hilton Head, and Dorchester County, South Carolina. Hilton Head requested an emergency push of debris from their roadways and Dorchester County, SC, activated their contract for the removal and grinding of vegetative debris and the managing and removal of debris from their citizen drop off sites. CrowderGulf responded immediately to both activations by sending emergency response crews to Hilton Head and simultaneously sending personnel and equipment resources to Dorchester.

CrowderGulf completed the Push activation for Hilton Head in less than 24 hours and removed, reduced and disposed of over 31,294 cubic yards of debris for Dorchester County within 30 days. Although these were the only two contract activations, CrowderGulf performed numerous damage assessments for clients stretching from Florida to Virginia. In addition,–CrowderGulf performed several miscellaneous projects, one of which was for the City of Dickinson, Texas. CrowderGulf removed and disposed of waterway debris that was deposited in Dickinson Bayou following the 2017 Hurricane Harvey. This special Project resulted in the removal of 27,872 cubic yards of debris. CrowderGulf utilized self-loading barges, floating empty box barges and chain saw crews remove the debris from the waterway. Additional work included bank and ditch clearing in which CrowderGulf utilized picker barges and forestry mulchers along with chain saw crews.

The work in North Carolina and Virginia primarily involved ROW debris removal, reduction and disposal of C&D and vegetative debris, right-of-entry debris removal, tree removal, demolition of structures, sand screening, rebuilding and replanting sand dunes and white goods removal and disposal.

Key Personnel

CrowderGulf Disaster Management brings responsible and experienced organization to partner with the City of Destin. CrowderGulf's extensive experience and personnel resources enable us to quickly assemble uniquely trained and experienced project teams and match specialized equipment and subcontractor resources with project execution requirements. All CrowderGulf officers, managers and supervisors have been involved in previous successful debris recovery operations and have been fully trained in quality control, safety, ethics and drug policies of CrowderGulf. Should we need their services we have additional management resources that include retired and semi-retired construction, City, County, FEMA, and Power Company professionals who are experienced in managing and inspecting disaster related work. We also have a standby agreement in place with various engineering companies to provide personnel for engineering services, if needed.

▪ Project Management Team Member Bios

The names and biographical information of CrowderGulf's professional staff that could be assigned to the City's Management Team are provided below. Everyone is very experienced in emergency debris management. Depending on the need, additional staff may service the City. All additional CrowderGulf staff added will be upon approval of the City. CrowderGulf personnel assigned are dedicated to the project from activation until project closeout. Assigned personnel will devote 100% of their time to the City. This provides consistency and enhances communication with all recovery agencies involved with the City's recovery. Those members highlighted in yellow have been specifically assigned to work with the City.

▪ Corporate Management Team / Top Level Management Personnel

The personnel listed below bring a wealth of disaster debris removal and management experience. They have been involved in management and operational decisions of all past contract activations for the past 10 years. Their knowledge and expertise make them invaluable assets in any debris removal operation from startup to final invoicing and reconciliation.

Ashley Ramsay-Naile – President – Florida Work Experience

Mrs. Ramsay-Naile is a Graduate of the University of South Alabama. She has been involved in managing the day-to-day business of CrowderGulf operations since 1995 when Hurricane Opal impacted the Florida Panhandle. She has played a vital role in establishing the Disaster Administration Office (DAO) in which she has structured and managed since its acquisition. As President for CrowderGulf, her role has provided a liaison to clients, logistics coordination with our field operations, contract negotiations, preparation of proposals, subcontractor coordination, field supervisor, project management, and all aspects of back-office activities including accounts payable, accounts receivable and human resources. Having served in both field and documentation management positions, Mrs. Ramsay-Naile is very knowledgeable in all aspects of the debris recovery business and a national leader in the field. **Due to Ashley's integrity and excellent leadership skills, CrowderGulf has continued to cultivate one of the most dedicated and capable teams in the disaster debris recovery business.** Mrs. Ramsay-Naile is involved with all aspects of decision making for CrowderGulf and is an authorized contract signer for the Company.

Reid Loper –Senior Vice President – Florida Work Experience

As a leading expert in the disaster recovery field, Reid Loper has played a key role in successfully managing recovery for some of the nation's most known disasters including the BP Oil Spill, Hurricane Sandy in New Jersey, the unprecedented 2017 storm season in the south and Hurricane Michael in the Florida panhandle. He started his career with CrowderGulf in 2010 as a Senior Project Manager after gaining valuable experience in management, estimating, scheduling and budgeting as a project manager for a leading commercial construction company in Atlanta.

Managing simultaneous projects is one of Reid's strengths and he honed those skills even more during the BP Oil Spill. He successfully managed more than 1,200 people, 600 pieces of equipment and eight forward operating bases throughout Alabama. In 2012, Reid was selected to oversee CrowderGulf's Hurricane Sandy Response for the New Jersey Department of Environmental Protection Agency. Since that time, he has managed more than 50 million cubic yards of debris removal for all CrowderGulf projects.

Reid has been strategically involved in directing all CrowderGulf projects since his promotion to Vice President in 2016. Reid's excellent leadership, organizational skills, attention to detail, and his interpersonal relationships with Clients, fellow employees, and subcontractors, make him an invaluable asset to CrowderGulf and to the disaster debris industry. Reid played a key role during the unprecedented 2017 storm season directing 96 simultaneous contract activations and more than 150 project managers. Reid oversaw the 2018 Hurricane Michael debris missions after the Florida Panhandle was devastated by the first Category 5 hurricane to make landfall since 1992 Hurricane Andrew. This resulted in removing more than 14,000,000 cubic yards of debris. During the 2020 storm season, also one of the most active in history, Reid directed operations in Louisiana, Mississippi and Alabama, removing and disposing of more than 20,000,000 cubic yards of debris.

In addition to playing a leading role in disaster recovery for CrowderGulf, Reid also manages their waterway debris removal division, including projects from New Jersey, Florida, Alabama, and Texas, making him nationally renowned as one of the leading experts for water borne debris removal. When he is not working on disaster responses, Reid bids and oversees various types of construction projects under the special project division.

Academically, Reid graduated from Auburn University with a bachelor's degree in aerospace engineering and is a LEED Accredited Professional with certifications in NPDES and FEMA courses. He has a current OSHA 30 and HazWoper 40 certification is NIMS certified and holds general contractor licenses in the following states: Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, and Louisiana.

Reid is also a recognized leader in the community and was inducted into the Mobile Bay 40 under 40 class of 2021. He also serves as a board member for the Alabama Coastal Foundation, with a mission to improve and protect Alabama's coastal environment through cooperation, education and participation.

Jacob "Matt" Tate – National Director of Response and Recovery – Florida **Work Experience**

Matt retired after 25 years with United States Army Corps of Engineers (USACE) with 20 of those years providing leadership in a variety of USACE projects, programs, and disaster related response missions. During his time with USACE, Matt was deployed as a Type 1 Debris Subject Matter Expert (Lead Debris SME) to 38 different disaster events that included floods, hurricanes, typhoons, wildfires, winter weather and building collapses throughout the United States and outside the continental United States. Matt has extensive knowledge in overall Project Management including Contract and Scope of Work development, Contract Negotiations, Budgeting, Scheduling, Resourcing, Cost Estimating, Quality Control, Safety and Debris Management /Removal Operations to include Right-of-Way Debris Removal (ROW), Private Property Debris Removal (PPDR), Commercial Debris Removal (CDR), Demolition, Waterway/Marine Debris, Debris Management Site (DMS) Development and Operations, Reduction, Recycling and Disposal. His extensive background makes him uniquely qualified to take on CG's newest role of "National Director of Response and Recovery". In this role, Matt will expand CG's opportunities in the federal markets while also bolstering our already successful pre-event contract, as well as establish and foster strategic teaming partnerships.

Matt started his esteemed career as an Engineering co-op student in 1999 with USACE Mobile District. After graduating from the University of South Alabama in 2003 with a Bachelor of Science in Civil Engineering, Matt worked his way up to Supervisory Civil Engineer, and in 2008 was selected as Mobile District Disaster Program Manager for the Emergency Management Branch, Operations Division. Serving in this position, he was responsible for readiness and response activities throughout the district's area of responsibility which included all hazards disaster related programs, directives, detailed plans, and preparedness measures. He also served as the USACE National Debris Program Manager/ Lead Subject Matter Expert where he managed all FEMA missions that included assigned debris activities to the Department of Defense. Matt frequently briefed and provided information to the Head Quarters USACE and General Staff. He served as the primary point of contact for all manners of debris mission activation and deployment recommendations, to be prepared for potential debris missions. Matt received numerous awards and recognition throughout his illustrious career.

Nick Pratt – Director of Operations – Florida Work Experience

Mr. Pratt serves as CrowderGulf's Director of Operations. Nick is the lead in the initial onsite team when a disaster strikes our clients. His ability to assess damage, evaluate the needs, coordinate field assets and subcontractor resources is invaluable to the overall success of our many projects. Since starting work with CrowderGulf in 2004, Nick has worked in every disaster activation from Florida to Texas and New York to New Jersey. He has honed his skills as he worked in various field leadership positions, from crew foreman, equipment operator, field supervisor, project manager, and currently as the Director of Operations. Nick is a trustworthy man of action that works with Clients in an honest and forthright manner to help restore cities and counties after a disaster. His work ethic and management skills have gained him the respect of all that work with him, including the CrowderGulf team, Clients and subcontractors.

Since 2005, Nick has been one of the first CrowderGulf team members to be on the ground and/or in the air assessing the needs of our clients, communicating with our team and directing the necessary resources to ensure every project is working to restore citizens to normalcy as quickly as possible. Mr. Pratt also serves as a vital Quality Control agent to ensure that all work is completed efficiently and within the parameters of all FEMA regulations, local and state laws.

Nick initially handled all the logistics for the Oil Spill project, putting hundreds of pieces of CrowderGulf equipment in place and directing and training hundreds of CrowderGulf employees throughout the operation. Nick has continued to assist our team by providing his expert knowledge and leadership in the field to complete any assignment given to him on or ahead of schedule. Nick has played a vital role as project manager for our large waterway debris removal contract with the New Jersey Dept. of Environmental Services, because of Hurricane Sandy in 2012. From 2012- 2018, Nick has worked numerous disaster responses for CrowderGulf providing Project Management and asset coordination assistance for multi-state responses. In 2017, Nick worked to secure subcontractors, field personnel, equipment and assets after Hurricane Harvey struck the Texas Coast.

Hurricane Irma devastated Florida two weeks later and he remobilized and oversaw the same task items along the Florida Coast. He managed to supply necessary subcontractors and equipment to all **91 activated contracts** in Texas and Florida after those two historical storms. **These two storms combined to require services from 683 Total Subcontractors throughout 2 States**. In addition, Mr. Pratt has been the Senior Project Manager in the field for the Florida Department of Environmental Protection waterway debris removal project that occurred after Hurricane Irma. Multiple Counties throughout Florida activated contracts and he worked with Project Managers to remove approximately **250,000 Cubic Yards** of waterway debris.

In 2018, Mr. Pratt provided leadership and resource assets for CrowderGulf's simultaneous activations in North Carolina following Hurricane Florence, in which CrowderGulf had 20 contract activations and in the Florida Panhandle for 11 additional contract activations following the devastating Category V, Hurricane Michael. Mr. Pratt worked to secure necessary subcontractors, field personnel and equipment to approximately 11 Clients after Hurricanes Laura and Delta struck Louisiana and Hurricane Sally severely damaged the Alabama Coast. **Most recently Mr. Pratt worked in the States of Florida, Georgia, North Carolina and South Carolina after Hurricanes Milton and Helene caused severe damage and historic flooding. These activations were historic in nature because the storms damages areas not prone to typical hurricane winds and flooding.** His ability to assess each project's needs, assign personnel, and inventory assets has been instrumental in our ability to meet each contract activation with the necessary resources to quickly and efficiently respond to each client. Mr. Pratt attended the University of South Alabama. He also holds certificates in CPR and First Aid, 40-hour HAZWOPER and refresher and in 30 HR OSHA Construction. (NIMS Trained)

Margaret R. Wright, Ph.D. – Senior Documentation Director – Florida Work Experience

Dr. Wright has over 25 years of professional training and managerial experience. As a vital member of CrowderGulf's Senior Management Team, her roles have included technical proposal writing, training developer and facilitator, regulations compliance, management of record keeping, including day-to-day operations of work completed, communication and coordination with contracting entities during reconciling process, and conducting formal evaluations at completion of projects.

Dr. Wright worked in field operations, 2003 – 2010, setting up and managing field offices, hiring and training personnel to work with all required documentation, and at CrowderGulf's Disaster Assistance Office (DAO) after all major disasters since 2010. Her work in the field began several years before monitoring companies were prevalent and before ADMS was developed. All ticket data were entered into CrowderGulf's unique and strong database that was developed by a retired engineer on staff.

After Hurricane Ike in 2003, Dr. Wright developed an Orientation Training Program for Hurricane Preparedness and FEMA Regulations. She and Mr. Young presented training courses throughout Florida, Virginia, South Carolina and Texas for CrowderGulf Clients with pre-event contracts. As an example of CrowderGulf's commitment to Clients, in 2017, Dr. Wright worked **onsite** for over six weeks with our client and their monitoring firm to assure that documentation and FEMA reimbursement went smoothly after Hurricane Hermine. She worked to properly invoice and document approximately 9 million dollars for the City of Tallahassee and Leon County.

Dr. Wright currently assists with proposal writing and mentoring new employees on disaster debris operations. (NIMS Trained)

John Campbell – Senior Director – Florida Resident & Florida Work Experience

Mr. Campbell has experience in disaster response planning and management since 1968. He has a B.S. degree in Political Science from the University of Southern Mississippi and a master's degree in Logistics Management from the Florida Institute of Technology. After retirement from the U.S. Army as a full Colonel with 30 years of service, he served for six years as Chief of Operations for Lee County Emergency Management in Fort Myers, Florida. He has direct experience in debris recovery operations from Hurricane Iniki in Hawaii and Hurricanes Charley, Ivan and Wilma that impacted Southwest Florida. He also provided mutual aide to Escambia County, Florida following Hurricane Ivan. During his 36 years of public service, he amassed an extensive background in high-level management, disaster response and training. He also trains CrowderGulf clients in all facets of debris management, Incident Command System (ICS), National Incident Management System (NIMS) and the FEMA PA program process. Mr. Campbell was previously qualified as an accredited Professional Emergency Manager through the Florida Emergency Preparedness Association (FEPA) and remains active in the organization. (NIMS Certified Instructor)

Raymond "Buddy" Young – Senior Director – Florida Work Experience

Mr. Young was **Regional Director of FEMA Region VI from 1993 – 2001** and served as Administrator for 133 federally declared disasters and emergencies. He is nationally known and recognized in the Emergency Management field and is extremely knowledgeable about FEMA policies and procedures. He is a retired Captain of the Arkansas State Police where he served for 26 years. As the Director of Operations, Mr. Young has been directly involved in the field operations for all major disasters from Hurricane Isabel in 2003. Mr. Young's FEMA knowledge and experience is invaluable to both CrowderGulf and all clients as decisions must be made during the cleanup operation. Mr. Young is one of the most knowledgeable people working in the debris management field with firsthand experience in managing major disasters. He is also a current member of the Board of Directors for the Disaster Recovery Contractors Association (DRCA). (NIMS Trained)

▪ Regional Directors and Regional Managers

Barrett Holmes – Regional Director (East Coast) – Florida Work Experience

Colonel (Retired) Holmes joined the CrowderGulf Management Team with more than 30 years of successful leadership and management experience with the United States Army. He is a combat veteran of the United States Army with a distinguished military career where he successfully led engineer units from the platoon to the brigade level. He commanded the 20th Engineer Battalion and was assigned to the First Brigade Combat Team of the First Cavalry Division, Fort Hood, Texas. The Battalion was awarded the Army Valorous Unit Citation for their Combat Service during Operation Iraqi Freedom II. Under his leadership, the 20th Engineer Battalion supervised construction projects valued at over $718 million in eastern Baghdad, Iraq under austere conditions.

Following his service in Iraq, Colonel Holmes was selected to command the Japan Engineer District in Tokyo, Japan. As the District Engineer, he led the design and construction agency for all Unites States forces and federal agencies in Japan and was responsible for a multinational construction program valued at over $975 million. Colonel Holmes then served as the Defense Coordinating Officer (DCO), the Principal Department of Defense representative with the Federal Emergency Management Agency (FEMA) Region IV. He coordinated Department of Defense resources for numerous disasters to include Hurricanes Earl, Isaac, and Sandy and provided extended support for the United States Coast Guard during the Gulf Coast clean-up following the Deep Water Horizon oil spill. Since Barrett joined the CrowderGulf Team, he has deployed to 16 activations and managed over 65 projects that include hurricanes, floods, tornadoes and ice storms. In 2022 when Hurricane Ian devastated Florida's Gulf coast, Barrett managed CrowderGulf's complex recovery operation on Sanibel Island, Florida. Sanibel's causeway and bridges breeched in multiple locations; CrowderGulf rapidly established barging operations and transported over 1,200 pieces of equipment to expedite recovery.

During his 40 plus years of service and work experience he has developed an extensive background in leadership skills, training management and disaster response. During his tenure with CrowderGulf, Barrett has conducted well over 200 training sessions with clients, and he is able to share lessons learned and experience with clients to better prepare them for disasters. He received a BA degree from Clemson University, as MA degree from the University of Florida and is a graduate of the Army War College with a Master of Strategic Studies degree. He also affiliated with the Society of American Military Engineers and the Army Engineer Association. (NIMS Trained)

Don Madio – Regional Director (FL) – Florida Resident & Florida Work Experience

Don Madio is a life-long resident of Florida and serves as CrowderGulf's Regional Director for the state. Mr. Madio began his career in the disaster recovery industry in 1999. Since that time, he has served on more than 200 mid-to-large scale disaster recovery, waterway, and debris management projects. Upon taking a position with CrowderGulf following Hurricane Mathew, Don oversaw seven debris removal and waterway projects that were successfully completed within the client's time frame and contract specifications.

Shortly thereafter, in 2017, Don became Florida's Regional Manager following the devastation of Hurricane Irma, one of the most powerful and damaging Atlantic hurricanes ever recorded. His extensive management experience, multi-tasking and organizational skills served him well as he was tasked to oversee operations throughout the state. He and his team of project managers and field supervisors successfully managed the removal of over 11.8 million cubic yards of debris for 64 debris management and waterway projects. Following Hurricane Michael's destructive impacts in the Florida Panhandle, Don helped supervise multiple projects throughout the region, where over 15 million cubic yards of debris were removed and disposed. Recently, Don worked throughout the state of Florida providing guidance and assistance to CrowderGulf clients affected by Hurricane's Ian and Nicole in 2022. Don also helped supervise the management of 34 different contract activations for both storms. He continues to provide guidance for those projects and multiple activations in the wake of Hurricane Idalia along Florida's West Coast in 2023.

When he is not in the midst of storm season, Don enjoys traveling the state and building relationships with clients as well as providing contract maintenance, training, and technical assistance. A seasoned believer in pre-planning and operational improvement, Don also administers annual training to project managers, field supervisors, and regional subcontractors. Mr. Madio is a University of Florida graduate and holds multiple FEMA and USACE certifications.

Bill Doran – Director of Government Programs and Policy / Regional Director (LA)

A Louisiana native, Bill is a highly knowledgeable and experienced member of the CrowderGulf Team. He has decades of experience in Disaster Recovery and is considered a Subject Matter Expert (SME) regarding Federal Programs, State and Federal Government Intergovernmental Affairs involved in Disaster Preparedness, Response, Recovery and Mitigation, to include Federal Grant Programs for FEMA, HUD, USDA, USACOE, Dept of Homeland Security and U.S. Armed Forces. He retired as a presidentially appointed Federal Coordinating Officer (FCO) with FEMA after 8 years, serving in both the Obama and Trump Administrations.

Prior to joining FEMA, Bill retired as an Air Force Colonel with 28 years of total service. Bill's experience includes over 25 Federally declared disasters in 9 different states. These include Hurricane Harvey, Texas & Baton Rouge Flood Recovery, the Moore Tornado in Oklahoma, and Katrina/Rita Long Term Recovery as well as serving as the Response Director for FEMA Region 6.

While in the Air Force, Bill was assigned as Joint Director of Military Support for the Louisiana National Guard to support domestic operations for Homeland security and Disaster support to civil authorities, including the Responses to Hurricanes Katrina/Rita, Gustav/Ike and the BP Oil Spill. Prior to that he also served as the full-time Squadron Commander for Aircraft Maintenance of the F-15 aircraft while stationed at NAS Joint Reserve Base New Orleans. Highlights of service include conducting operations for Noble Eagle post 9/11 and deploying to the Middle East twice for ongoing operations.

Bill holds degrees from the Emergency Management Institute Executive Academy (Harvard Kennedy School of Government, Naval Post Graduate School, University of Hawaii, Texas A&M), the University of Maryland, (MD Master of Science in Management), the USAF Air War College and Louisiana State University (B.A. Journalism). Bill is also a Certified Emergency Manager (CEM) by the International Association of Emergency Managers.

Leigh Anne Ryals, ALEM, CLEM – Regional Director (AL, MS & TX) – Florida Work Experience

Mrs. Ryals has over 17 years of experience and training in Emergency Management. She has 11 years serving as an Emergency Management Director and 5 years serving as a Disaster Public Information Officer. She has worked 12 Presidential Disaster Declarations and one Incident of National Significance, the Deep-Water Horizon oil spill, and of those disasters she served as Incident Commander for eight of those events prior to starting work with CrowderGulf. Mrs. Ryals joined CrowderGulf in 2011 and immediately began work in North Carolina following Hurricane Irene. She used her knowledge of the FEMA Public Assistance Reimbursement Program and experience to provide quality control and project oversight to assist our team and our clients in program policy and procedures.

Mrs. Ryals experience includes writing Debris Management and Mitigation Plans for County and Municipal Governments. She is extremely knowledgeable with FEMA's public assistance policies and procedures and has been successful in the FEMA appeals process. She has served as a member of the FEMA Hurricane Liaison Team and testified before the 110th and 111th U.S. Congress on Hurricane Katrina Preparedness and Response Initiatives – Best Management Practices. She obtained valuable knowledge in documentation proper damage survey, reports/technical writing, and extensive knowledge on FEMA policy and procedure. Mrs. Ryals learned first-hand the type of documentation and determination it takes to be successful in an OIG / FEMA audit.

Mrs. Ryals utilizes her knowledge and previous experience to train new Project Managers and enjoys sharing her experience through classes, seminars and national and state held conferences. She conducts client preparedness and education training and serves as a Project Manager when needed. Following Hurricane Matthew in Georgia, Hurricane Harvey in Texas and Hurricane Sally in Alabama, Mrs. Ryals utilized her knowledge and skills to provide project management expertise. Most recently, following Hurricane Ian, Mrs. Ryals provided Project Management Services to Synergy Inc., a private insurance Company representing the Charlotte County Florida School System. This work included the collection, removal and disposal of debris for thirty-five school properties and the demolition of two school facilities. She was Licensed and Certified as an Alabama Emergency Manager; and a NIMS 300 & 400 Course Instructor. She holds numerous FEMA and State Emergency Management Certifications.

Drew Sprinkle - Regional Manager (AL, MS, LA) – Florida Work Experience

Mr. Sprinkle has a BSBA Degree from Auburn University in Supply Chain Management. He first worked with CrowderGulf in 2008 following Hurricane Ike on the Bolivar Peninsula in Texas as a field supervisor, and again during the BP Oil Spill in 2010 as a logistics supervisor. After receiving his degree from Auburn, he worked as an Account Manager for a third-party logistics firm where he managed multiple high volume logistics accounts for customers in the construction and steel industries. Drew returned to the Debris Management industry as a Project Manager in 2017, when Hurricane Harvey struck the Texas coast. Mr. Sprinkle has served as a Project Manager on a wide variety of projects.

In 2018, Drew supervised over 200 employees and used innovative techniques to remove over 4,000 tons of dead marine life in south Florida following a massive Red Tide Fish Kill. Following flooding in Horry County, SC caused by Hurricane Florence, he was the Project Manager for the South Carolina Department of Transportation (SCDOT) and worked to remove flood debris from the 1,200 square mile county. Hurricane Michael hit the Florida Panhandle in the fall of 2018, and he served as the Project Manager for both the City of Parker and the City of Lynn Haven, Florida. During this activation, Drew successfully directed the removal and disposal of over **1.2 MILLION CUBIC YARDS** of debris. Most recently, Drew was Project Manager for the City of Gulf Shores, AL after Hurricane Sally caused widespread damage in the area. When not actively working in the field, he is also tasked with technical writing and the organization of proposals. He holds General Contractor License's in Alabama, North Carolina, and California. Drew also has certifications in OSHA 30, TWIC, and NIMS.

Joe Hayes - Regional Manager (FL) – Florida Resident & Florida Work Experience

Joe Hayes grew up around the storm relief and disaster debris management industry. Combined with a strong background in general contracting, agriculture, and various other aspects of debris management, he is accustomed to providing the leadership and oversight to complete projects expediently, efficiently, and to the clients' utmost satisfaction. In 2016, Joe joined CrowderGulf team as a field supervisor in the wake of Hurricane Matthew. In 2017, following Hurricane Irma, Joe was tasked as a Project Manager; managing a number of projects throughout the South Florida area after Irma caused widespread damage throughout the state. Through these projects and the combined effort of the CrowderGulf team, **10 MILLION CUBIC YARDS** of Hurricane Irma related debris were managed and disposed of; facilitating an extensive statewide recovery.

In 2018, following the devastation of Hurricane Michael's effect on the Florida Panhandle, Joe was tasked with managing the removal and disposal of debris left by this strong category 5 hurricane in Jackson County, FL. Mr. Hayes, along with his CrowderGulf team were able to mitigate the challenges of such a large scale disaster all the while employing innovative support and leadership to provide relief to the devastated county. He and his team of field supervisors oversaw hundreds of assets and personnel; providing the logistics that resulted in over **2.5 MILLION CUBIC YARDS** of debris being removed and disposed of in Jackson County alone. In 2020, Mr. Hayes along with other key members of the CrowderGulf management team were sent to Calcasieu Parish, Louisiana after Hurricane Laura tore through the state, with winds peaking at over 140 MPH. Having been tasked with managing the recovery effort in the unincorporated portion of the Parish, Joe and his colleagues have removed over **7 MILLION of the estimated 12.5 MILLION CUBIC YARDs** of debris for the Parish and its included municipalities to date. Along with Joe's experience in managing the aforementioned large-scale disaster recovery projects, he has also managed a broad range of other debris projects throughout Florida and the southeast. When he is not in the field, Joe is a CrowderGulf representative for the South Florida area, ensuring the utmost level of preparedness and support for each client. Mr. Hayes is a Florida native, a lifelong Palm Beach County resident, and is an honors graduate of Florida Atlantic University.

Barton Holmes – Regional Manager (East Coast) – Florida Work Experience

Barton brings to CrowderGulf a distinguished background in Law Enforcement and service in the US Army with US Army Special Operations Command. Mr. Holmes joined CrowderGulf in 2016 as a Field Supervisor during multiple activations for Hurricane Matthew where he developed and implemented the industry's first usage of drones for debris removal documentation and volumetric calculation. His insight allowed the CrowderGulf team to streamline various aspects of the Hurricane Matthew recovery effort for the Island of Hilton Head and other clients along the East Coast. In 2017, Barton was tasked as a project manager for multiple projects along the Texas Coast in the aftermath of Hurricane Harvey. In 2021, Mr. Holmes worked with Warren County and Bowling Green, Kentucky, after an EF-3 Tornado caused damage throughout the State. The Kentucky Team worked to remove and dispose of over 200,000 cubic yards of debris. They battled severe weather in the form of ice storms and even had to deal with another tornado hitting the City of Bowling Green, just a month after the first.

After Hurricane Ian devastated much of Lee County, FL, in 2022, Barton was the Project Manager that oversaw the massive cleanup in Fort Myers Beach, FL. His calm manner and leadership skills were a major asset to the town and CrowderGulf's team. He conscientiously worked through all the issues and was able to manage the removal of over 800,000 cy of debris.

Currently, he serves as the Regional Manager for CrowderGulf's clients in the Eastern Region, developing and conducting training programs and enriching CrowderGulf's long lasting relationships with our clients.

Valerie Gonzalez – Regional Manager (TX) – Florida Work Experience

Ms. Gonzalez is a native Texas resident who enjoys the Great State of Texas and its vast beauties. Ms. Gonzalez believes in honesty, integrity and a strong work ethic. She was born and raised in the Lower Rio Grande Valley. Ms. Gonzalez relocated to San Antonio to attend the University of Texas San Antonito where she received an undergraduate degree in Biology and Criminal Justice. After receiving her undergraduate degree, Ms. Gonzalez moved to Houston to attend graduate school. She earned a Juris Doctorate from Thurgood Marshall School of Law and graduated as the valedictorian.

Prior to her employment with CrowderGulf, Ms. Gonzalez worked for Aransas County. She began as a Sanitarian ensuring citizen and business compliance with regulations regarding food safety and on-site sewage disposal. After 18 months of employment, she was promoted to Director of Environmental Health. In this position, she successfully assessed and navigated environmentally complex projects. As the Director of Environmental Health, Ms. Gonzalez simultaneously managed the solid waste program as well as the vector control program for Aransas County.

During her tenure as the Director of Environmental Health with Aransas County, she oversaw debris operations for Hurricane Harvey, a catastrophic Category 4 hurricane, which made landfall in Aransas County. As the debris manager, her duties included local, state, and federal coordination for debris clean up. Included in the debris clean-up, waterway debris removal as well as private property debris removal were also implemented and successfully completed. Ms. Gonzalez's ability to successfully communicate, collaborate and coordinate with the various agencies involved in debris removal led to recruitment and acceptance into the Texas Department of Emergency Management (TDEM) Disaster Recovery Task Force (DRTF) as a debris specialist. In her capacity as a debris specialist, she was deployed to the Eastland Fire Complex to assist the local agencies with debris clean up. In addition to her Harvey debris efforts, Ms. Gonzalez successfully consulted and coordinated with state and federal partners in the county wide aerial vector control activities to alleviate nuisance mosquitoes which promoted recovery efforts.

▪ Field Personnel and Project Management Team

Jeff Zemlik – Safety Manager – Florida Work Experience

Mr. Jeff Zemlik graduated from Columbia Southern University, graduating with degrees in Occupational Safety and Health as well as Organizational Management. Originally hailing from the Chicagoland area, Mr. Zemlik joined the CrowderGulf team in 2010 during the BP Oil Spill. During this cleanup effort, Jeff headed up the contractor safety program for the state of Alabama.

Every CrowderGulf activation requires Safety in the field, and Mr. Zemlik's field presence is one of his strongest qualities. Regardless of size, safety policies and procedures are strictly enforced, either by Jeff personally, or by the team of trained safety professionals managed by Mr. Zemlik. During Hurricanes Harvey and Irma, Jeff directed the safety program for over 1,500 hauling trucks doing work in three states without recordable injuries or fines. In addition, he provided operational oversight for debris removal operations in Brazoria County, TX. In 2018, after Hurricane Michael Jeff took the lead in Panama City's "PUSH" operations, providing oversight for the City's leaner/hanger program and removal of trees from publicly owned spaces, as well as providing safety leadership to the entire area of operations.

During the hyperactive hurricane season of 2020, Jeff spearheaded supplying PPE to various government agencies pertaining to COVID-19 protection. 2020 project highlights included removal of 60,000 yards of seaweed after Hurricane Cristobal, over 200 PUSH crews post Hurricane Laura, and working closely with the Audubon Society of New Orleans, LA for post Hurricane Zeta cleanup at several of their unique facilities that house common zoo animals and endangered species. In 2022, Mr. Zemlik was deployed to Lee County, Florida, providing safety and environmental management, and overseeing all material being hauled from debris management sites to final disposal for all CrowderGulf projects. In addition to his accredited degrees, Mr. Zemlik holds his OSHA 500, trains all HAZWOPER associates, USACE CQM and 385-1-1 training. He also has his Asbestos Inspector and Supervisor Certifications. Mr. Zemlik manages the DOT program for the Company, and is trained in Fishbone root cause analysis, incident inceptions. Additional training and certifications include SONS & TWIC, OSHA 10-hour General Industry, OSHA 510 & 500, Leadership & influence. Jeff has also obtained his ISA Certified Arborist classification and is a local ISA member of both **Texas and Florida Chapters**. (NIMS Trained)

Wilber Ledet – Assistant Operations Manager / Senior Project Manager – Florida Work Experience

Wilber's disaster experience started when he and his family lost their home in Biloxi, MS, during Hurricane Katrina in 2005. He built a new home for his family in a safer location and after Hurricane Ike in 2008, he began working for CrowderGulf, managing the removal of wet debris targets identified by the CrowderGulf sonar crew, from West Galveston Bay, Tiki Island and Omega Bay, TX. This project also included his expertise in managing the stored vessel reclamation program in which he assisted in the removal of hazardous substances from the vessel and coordinated its proper disposal.

From 2010 to 2012, Wilber served as Project Manager, assigned to the Deepwater Horizon Oil Spill, managing up to 800 HazWoper certified responders and facilitating daily meetings with Environmental Teams and BP officials. In 2012, following Hurricane Isaac, Mr. Ledet was assigned as Project Manager to oversee the sand removal, sand screening and beach berm construction for the Town of Dauphin Island, AL.

Wilber's excellent leadership and work ethic has been instrumental in CrowderGulf's success in projects throughout several states from New Jersey after Hurricane Sandy in 2012, to managing large land and waterway projects in AL, LA, FL, SC, after hurricanes from 2014 to 2023.

Wilber currently acts as the Assistant Operations Manager and is instrumental in setting up operations after every disaster activation and ensuring that every project is completed to the satisfaction of CrowderGulf's clients. His knowledge of how to get an operation started and taking it to successful completion while effectively communicating with Clients, subcontractors, and the Management team, is a major contributor to CrowderGulf's success in every project.

Matt Lucas – Senior Project Manager – Florida Resident and Florida Work Experience

Mr. Lucas has over 25 years of extensive experience in debris cleanup. He managed the Hurricane Harvey cleanup in Port Arthur, TX, which resulted in **1 million cubic yards** of debris being removed and properly disposed.

After Hurricane Michael devastated Panama City, FL, Mr. Lucas was the Sr. Project Manager for the City with management of all rights-of-way (ROW), ditches, PPDR work, and the six temporary debris manage sites (TDMS), which resulted **in 4 million cubic yards** of debris being removed from the City.

In 2022, after Hurricane Ian damaged much of Florida, Matt was the Project Manager in Sarasota County. His excellent communication and leadership skills and his calm demeanor were key in the successful work accomplished in Sarasota County. Matt is very experienced and a positive asset to CrowderGulf

Before coming to work for CrowderGulf, Matt worked for the state of New Jersey and the New York Port Authority when the destruction of the World Trade Centers occurred. Matt was instrumental in the construction of various logistical sites for the cleanup operations. Matt has owned and operated several businesses throughout his career. He has held a New Jersey A901 disposal license, a New Jersey electrical license, 100-ton U.S. Coast Guard License, and a CDL

Howard Turner - Project Manager – Florida Work Experience

Mr. Turner has a long career spanning over two decades in the debris management industry. He began his management career at Grind-All where he oversaw scheduling and operations of multiple grinders, screens, loaders, excavators, mulch coloring plants, trucks, and miscellaneous equipment. After Hurricane Isabel devastated the eastern portion of Virginia in 2003, Mr. Turner joined CrowderGulf and utilized his experience in debris site and debris reduction management. Mr. Turner served a variety of roles in the cities of Virginia Beach, Norfolk, Suffolk, and Newport News while also assisting in the counties of James City, York, and Suffolk. He was responsible for aspects of disaster debris collection and reduction, final disposal of reduced debris, damage claims, client contact, and debris management site restoration.

Since 2004, as a Project Manager, Mr. Turner has been responsible for day-to-day management of all disaster recovery activities including collection crews and equipment, debris reduction and disposal, site restoration, and liaison to client municipalities, Army Corps of Engineers, and FEMA. Mr. Turner has managed projects for CrowderGulf in Florida, Georgia, Virginia, North Carolina, South Carolina, Alabama, and Arkansas. His years of experience in the debris industry and excellent communication skills ensure that every Client is restored to as close to normal as quickly as possible.

Isam Brisco – Project Manager – Florida Work Experience

Mr. Brisco is a Graduate of the University of North Texas. He began working with CrowderGulf in 2017 as a field supervisor. His excellent work ethic, communication and job skills allowed him to take on more responsibilities as a Project Manager. After flooding from Hurricane Harvey in 2017, Isam managed the debris removal operation in Dickinson, TX. He located a suitable temporary DMS for increased efficiency of haul in and reduction of C&D. He communicated with the city daily to give updates on progress, organized and communicated with subcontractors daily to assign debris pickup zones, Isam also worked with the Monitoring Company to ensure the job ran smoothly.

Mr. Brisco has been one of CrowderGulf's excellent Project Managers after every major disaster since 2017. Projects he has managed include Hurricane Michael, October 2018, Project Manager in West Bay County Florida, Hurricane Laura, August 2020, Project Manager in Calcasieu Parish, LA. He also managed the debris removal operations from drainage laterals Calcasieu Parish, removing over 2.2 million cubic yards of storm debris from over 800 miles of drainage laterals.

Mr. Brisco continues to work as a Project Manager in all activations (NIMS Trained) (Certified Asbestos Supervisor)

Robert Lewis Najor – Project Manager & Quality Control -- Florida Work Experience

Robert (Lew) began work for CrowderGulf in 2017, following a 25-year career with the United States Army Corps of Engineers (USACE). While at the USACE, Robert held such positions as Project Manager and Construction Quality Control (CQC) Manager. He worked USACE projects for Debris Management Services from 1993 – 2016. Robert's industry knowledge of disaster and debris related projects with the USACE and civilian contracting companies has led to his in-depth experience with removal and reduction, beach restoration, levee enlargement and buildup, operation Blue Roof projects, and flood control across the Gulf Coast. In addition to his extensive industry background, Robert is certified by the United States Army Corps of Engineers for Construction Quality Management for Contractors and is certified by the State of Florida Department of Business and Professional Regulation as an Underground Utility and Excavation Contractor. Robert's experience and ability to provide damage assessments has been a major asset in evaluating the aftermath of disaster events in order to help Clients. His training and experience with debris and project management and his understanding of the complexity of CQC Management has been instrumental in the successful completion of many of CrowderGulf's debris removal projects. Robert also holds a Class B certified driver's license and is a heavy equipment operator.

Jim Frye – Project Manager – Florida Work Experience

Mr. Frye's debris management career spans 20 years working throughout the United States. He began working for CrowderGulf as a Project Manager in 2017after Hurricane Irma. Since then, he has been involved in every CrowderGulf activation and has worked hurricanes, red tide events, tornadoes and floods. His communication skills and multi-tasking abilities make him an excellent project manager. Jim is well versed in ensuring a well-run project, from managing assigned assets, subcontractor coordination, locating staging areas and debris sites, to working with Clients to ensure that project is completed to their satisfaction. Most recently, Jim completed a project in Greenville, SC after Hurricane Helene and currently, he is in Mitchell County, NC as the assigned Project Manager. (NIMS Trained)

Projects that Jim has managed for CrowderGulf include Fort Myers in 2017 after Hurricane Irma, Lee County in 2018 after Red Tide, Leland in 2018 after Hurricane Florence, Hurricane Michael Panama 2018-2020, Hurricane Laura Sulphur 2020-2022, Hurricane Ian Fort Myers 2022-2024, Wind Event 2024 Texas (Richardson, Coppell, Carrollton), Hurricane Helene Greenville, SC 2024 and Mitchell County, NC 2025.

Marian Banks – Project Manager – Florida Work Experience

Mr. Banks has worked in the debris removal industry for almost 10 years. He has extensive background in tornado, hurricane and wildfire activations. His excellent communication skills and dedication to each project he is assigned increases his success. He has worked in Florida, Iowa, Kentucky and Texas for CrowderGulf. And had previously handled multiple activations in Louisiana, Florida and in California after the Camp Fire in Butte County.

Before joining CrowderGulf, he had a successful career in law enforcement as a lead detective in the Cornelia Police Department for over 10 years. (NIMS Trained)

▪ Disaster Administration Office Team

Wesley Naile - Contracts Manager – Florida Work Experience

Mr. Naile has had experience in the disaster and recovery field since 2004, when he served in Volusia County, Florida, as CrowderGulf's Project Manager during Hurricanes Charley, Frances and Jeanne. In 2005, he was assigned the role of Logistics Coordinator working out of the Disaster Administration Office (DAO), coordinating materials, equipment, and subcontractors to CrowderGulf's clients. Mr. Naile's roles now include managing the database for pre-event contracts information, coordinating with new and existing clients in establishing pre-event contract awards and contract documents and coordinating with clients on contract renewals. When disasters strike, Wes and his staff coordinate all field resources that Project Managers need to get their jobs up and running. This includes everything from portalets, towers, generators, portable housing, etc. Wes served three years in the U.S. Army as a 12B Combat Engineer with an honorable discharge. He also attended the University of South Carolina-Beaufort. He is also NIMS Trained.

Jesus Carretie – Program Manager--Florida Resident & Florida Work Experience

Based in Florida, Jesus Carretie serves on the CrowderGulf team as our Program Manager. This role requires the overseeing of the fulfillment of CrowderGulf's goals throughout one or multiple projects. This is accomplished by coordinating and strategizing across the different facets of a project from start to completion. Most recently, Mr. Carretie's role became especially integral in managing a pilot program involving Private Property (PPDR), Commercial Property (CPDR), and Title Property debris removal in the Southwest part of Florida under the Florida Department of Emergency Management. This was a result of Hurricane Ian (DR-4673-FL). Under this PPDR/CPDR/Title Property program, CrowderGulf accomplished the completion of debris removal, titled property removal, and/or demolition on over 2,400 properties.

Mr. Carretie assists in a variety of roles that include Data Management, Invoicing, Project Management, Business Management, and Client Relations. Mr. Carretie has been in Emergency Management and Disaster Recovery since 2014 and has worked in the numerous Debris Management projects including 2014 South Carolina Winter, Hurricanes Hermine and Irma, 2020 Oregon Wildfires, and Hurricane Ian debris removal.

Prior to joining CrowderGulf's team, Mr. Carretie has also worked as a Senior Grants Specialist on a FEMA Public Assistance project, and as a Production Manager in a Community Development Block Grant-Disaster Recovery project.

Amber Ramsay – Public/Community Relations and Marketing Manager – Florida Resident & Florida Work Experience

Ms. Ramsay has been CrowderGulf's Public/Community Relations and Marketing Manager since 2004. Throughout the year she interfaces with Clients and acts as CrowderGulf's Conference Coordinator. During a disaster, one of her main responsibilities is to liaison between CrowderGulf's Project Managers and USACE, elected officials, public work directors, incident commanders of Emergency Operations Centers and Clients. She coordinates directly with Public Information Officers and assists in the release of pertinent debris recovery operations to the citizens. Some of her field experience includes Field Supervisor in Pascagoula, MS after Hurricane Ivan in 2004, Lake Charles, LA after Hurricane Rita in 2005, Deere Park, TX after Hurricane Ike in 2008, and in Edenton, NC after Hurricane Irene in 2011 and Dauphin Island, AL after Hurricane Isaac in 2012. Prior to coming to CrowderGulf she was a Marketing/Sales Manager for McKenzie-Childs in New York City for 10 years. Ms. Ramsay is a Graduate of Auburn University. (NIMS Trained)

Lauren Bell – Controller

Lauren joined CrowderGulf in 2022 as Controller where she is responsible for overseeing financial reporting and accounting operations. During a disaster, her role helps to ensure CrowderGulf maintains adequate capital reserves for field operations to move without economic interruption.

Prior to joining CrowderGulf, Lauren served as Assistant Controller for The American Equity Underwriters, Inc, where she led a team responsible for financial operations including consolidated financial statement preparation, corporate analysis, forecasting and budgeting. Lauren began her career in public accounting at KPMG LLP in Birmingham, serving audit clients in a variety of industries. She holds a Bachelor of Science in Commerce and Business Administration and a Master of Accountancy from The University of Alabama.

Marcus Lund – Systems Engineering Manager

During his many years of experience in IT consulting, implementation and cyber security, Marcus Lund has developed the skills and knowledge necessary to manage and secure IT networks of all sizes. He started his career in 2008 with a Managed Service Provider where he began learning every aspect of network management, security and recovery needs. Some of his certifications include VMWare Certified Professional (VCP), Microsoft Certified Professional (MCP), Certified Systems Analyst, Certified Sonicwall Security Admin (CSSA) along with other network certifications.

Managing many businesses across several fields has created a learning environment for Marcus to adapt his skills with IT security regardless of the requirements. Fields in which Marcus has implemented and managed IT security include government, industrial, medical, construction, logistics and finance.

Over the years Marcus has been recruited many times to assist with cyber security issues such as ransomware and data loss. With his experience he has learned what it takes to handle any IT emergency and therefore has learned the skills needed to implement the needed measures to help prevent these disasters from occurring.

In addition to managing all IT needs for CrowderGulf, Marcus is also leading our digital disaster recovery and prevention efforts for our clients. He can run a full network risk assessment and provide a full managed services solution with backups and security to protect a client as needed. Along with the added protection he is also able to work with clients to assist them by providing IT consulting services for other IT needs such as cyber liability insurance applications, Active Directory, VMWare, Citrix, Microsoft Exchange and many more.

Gina Walley – Accounts Receivable Manager / Documentation Specialist – Florida Work Experience

Ms. Walley has been the Accounts Receivable Manager and Documentation Specialist since 2005. She continually interfaces with clients and client representatives to build a strong team relationship to provide accurate documentation to support CrowderGulf work. She works closely with clients during FEMA audits to provide necessary documentation in a timely manner. Her background in Computer Engineering Technology has helped her in creating and managing all in-house databases. Each database is specifically designed to meet the client's needs. In addition to client databases, she also builds databases that house pertinent company data such as contract information, subcontractor information and historical CrowderGulf information. Shortly after Hurricane Ike in 2008, she teamed with a programmer to build a unique and powerful database that has proven to increase accuracy in data recording. Ms. Walley's experience has spanned across more than 20 major hurricane events as well as numerous non-disaster-related projects. (NIMS Trained)

Jenny Todd Weaver – Subcontractor SMBE Compliance Manager – Florida Work Experience

Mrs. Weaver manages subcontractors, develops, and promotes CrowderGulf's Small/Minority Business division. Her focal point is to contact and localize subcontractors during and after the RFP development phase to maintain community involvement and maximize local small /minority businesses participation. In 2003, she earned a Bachelor of Science degree in Marketing and a minor in Mathematics from the University of Alabama. After graduation, she joined a law firm in Tuscaloosa. In 2005 she joined the CrowderGulf Team which was during the rebuilding process along the Gulf Coast after Hurricane Katrina. The legal experience she gained made her the ideal candidate to oversee the subcontracting operations. (NIMS Trained)

Resumes have been provided by the RFP Requirements.

No employee identified for anticipated assignment to the City's Site Management Team has ever been a defendant in any proceeding involving or arising out of debris removal services.

Additional Personnel

The following is a partial list of CrowderGulf's available management, administrative, and supervisory personnel (full resumes are available upon request) who, depending on the scope of work, may be assigned to the contract:

Full Time and DAO Personnel

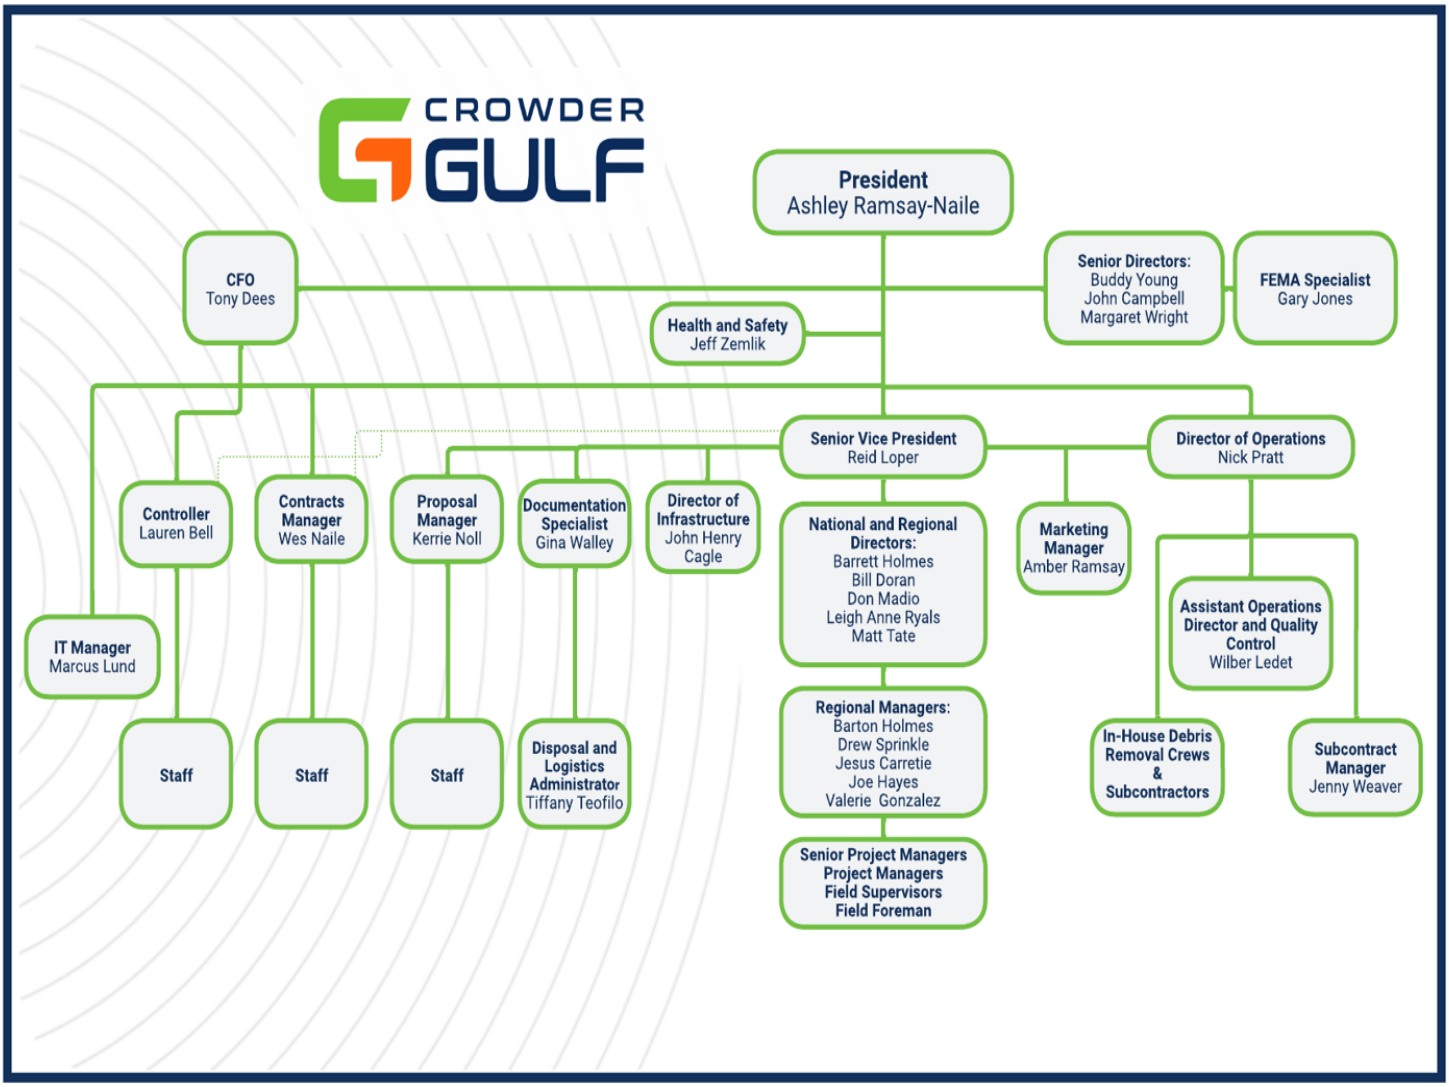
Organizational Chart

The Organizational Chart presented below depicts the structure and chain of command of the Company. CrowderGulf uses an organizational hierarchy based on the nationally recognized Incident Command System (ICS). The ICS employs a cascade of organizational components in groups of five or less to assure good quality control in high stress operations. This arrangement limits the respective spans of control to tolerable levels. CrowderGulf's use of the ICS-based hierarchy of responsibilities exploits the strength and flexibility of its management/supervisory structure.



Key Personnel Storm Chart

The chart below lists CrowderGulf's key personnel and the storms/activations since 2005. Additional information and resumes can be provided upon request.

Understanding of Governmental Programs

CrowderGulf's management team includes previous FEMA Directors, Emergency Managers and FEMA trained Debris Specialists. Numerous certifications are held by all our key management staff as well as our field operations staff. This wealth of knowledge is used to assist our clients in complying with FEMA guidelines and completing any and all paperwork that they may be called upon to provide FEMA, FHWA or the Office of Inspector General. Our staff is well-versed in the Code of Federal Regulations (44 CFR), FEMA's Public Assistance Program and Policy Guide (incorporating Debris Management Guide (FEMA 325), and Public Assistance Debris Monitoring Guide (FEMA 327). Today, the staff holds numerous FEMA course certifications and several OSHA Health & Safety and Hazardous Materials certifications. CrowderGulf employees are required to attend State and National conferences and training classes for continuing education credits and certification maintenance on a yearly basis.

Additional Courses that are relevant to Debris Management that are held by staff members include the following:

CROWDER GULF

Tab 4 - Operational Plan

City of Destin, FL

RFP # 25-05-PW for Disaster Debris Management Services

Tab 4 – Operational Plan

Principles of Project Management

Standards

CrowderGulf conducts all debris operations to meet or exceed all regulations and program standards of FEMA Public Assistance Program and Policy Guide, Version 5.0, Effective January 6, 2025 (incorporating FEMA 325 Debris Management Guide and FEMA 327 Debris Monitoring Guide), the Occupational Safety and Health Administration, the Environmental Protection Agency, and all other local, state and federal agencies.

Responsiveness

CrowderGulf will be in contact with the City's Debris Manager at least 48-72 hours prior to a tropical storm and/or hurricane making landfall or immediately upon the occurrence of any debris generating event within the City of Destin.

- Within 12 hours of receiving a NTP, CrowderGulf will have our management team report to the City representative for operations planning and mobilization of personnel and equipment.
- Mobilization for PUSH operations will begin within 12-24 hours of NTP.
- Within 48 hours of initial NTP, crews will be fully operational and hauling debris.
- Within 72 hours of the NTP, a DMS is fully operational for reduction and disposal of debris.
- Crews will maintain full debris hauling operational capacity, seven days a week during daylight hours, until completion of the project, to the satisfaction of the City of Destin.
- The DMS may, if required to meet the needs of the City, operate 24 hours per day.

Reimbursement Assistance

CrowderGulf's debris management staff consists of previous FEMA Regional Directors and Deputy Directors, City and City Emergency Management Directors and emergency operations personnel with over 20± years of experience in working State and Federal Disaster Declarations. CrowderGulf is prepared to share its knowledge and experience concerning reimbursement matters with City personnel to obtain maximum reimbursement by utilizing accurate record keeping and exacting quality control measures. Specifically, with:

- Estimating debris volumes for initial damage assessment
- Developing Project Worksheets/Damage Survey Reports
- Identifying eligible and ineligible reimbursements
- Documenting every element of the recovery process and reviewing all records to ensure that they meet federal and state reimbursement guidelines.
- Orientating and training the City of Destin personnel on requirements for quality and quantity of required documentation
- Closeout and final audit
- Hazard Mitigation Planning efforts
- FEMA Disaster Assistance policy changes

Corporate Support On-Site Operations

Daily operational decisions and daily communications with the City of Destin will be facilitated by the CrowderGulf on-site Management team. If needed, one or more field offices will be set up immediately upon NTP. Local citizens will be employed and trained to work in the field office under experienced CrowderGulf management supervision. Local employees are always an asset to the response and recovery operation. Their knowledge of the area and its people is invaluable to CrowderGulf's overall operations. The Team will be fully reinforced at all levels by logistical support, records management/storage, report development and other operations at CrowderGulf's main office in Mobile, Alabama.

On-Site Project Management

CrowderGulf utilizes National Incident Management Systems (NIMS) principles in our command structure, planning, operations, logistics and administration. This will not only facilitate an easy interface with the City's Emergency Operations Center but also ensures maximum quality control by limiting the span of supervision for individual field managers.

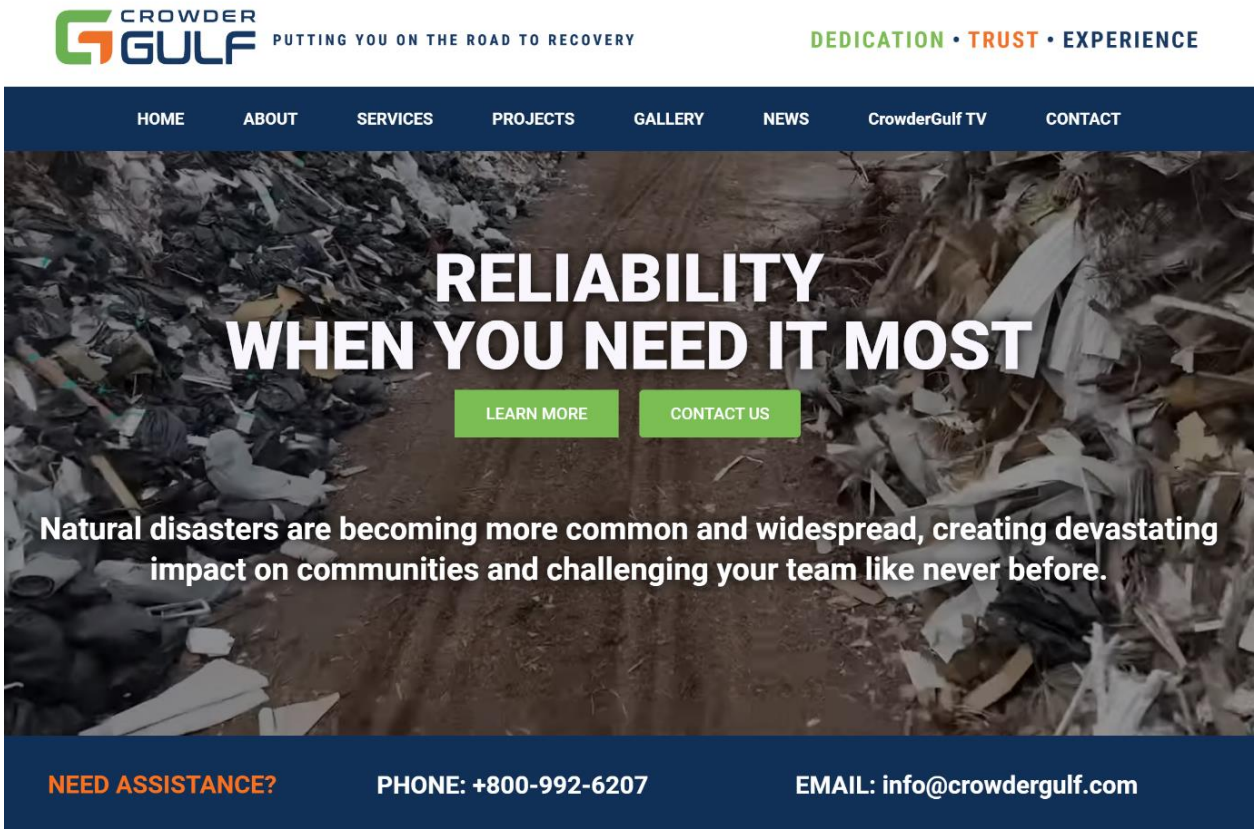
Pre-Planning - Readiness Planning and Training

On at least an annual basis, CrowderGulf specialists will provide training and pre-planning sessions. In addition, our Debris Reduction specialists will be available to review and advise on potential Debris Management Sites. Preparedness training will be tailored to the City of Destin needs and requests.

Audio/Visual Presentations

CrowderGulf has the capability to generate audio and video presentations to help the City communicate necessary information to the public or to document the overall operation. One of our first tasks is to video all the existing conditions. This is typically done during the initial damage assessment. Please visit our website to see some of our previous video documents.

Please view our website @ www.crowdergulf.com for more information and watch our videos on CrowderGulf TV



Debris Management and Operations Plan

The CrowderGulf **Debris Management and Operations Plan** establishes an early appraisal of disaster damage, moves trained and well-equipped crews into affected areas in the shortest time possible and follows a disaster-specific work plan. This ensures that our personnel and equipment will be mobilized and in place to remove and reduce debris in the most efficient and effective manner and with the least possible impact on citizens.

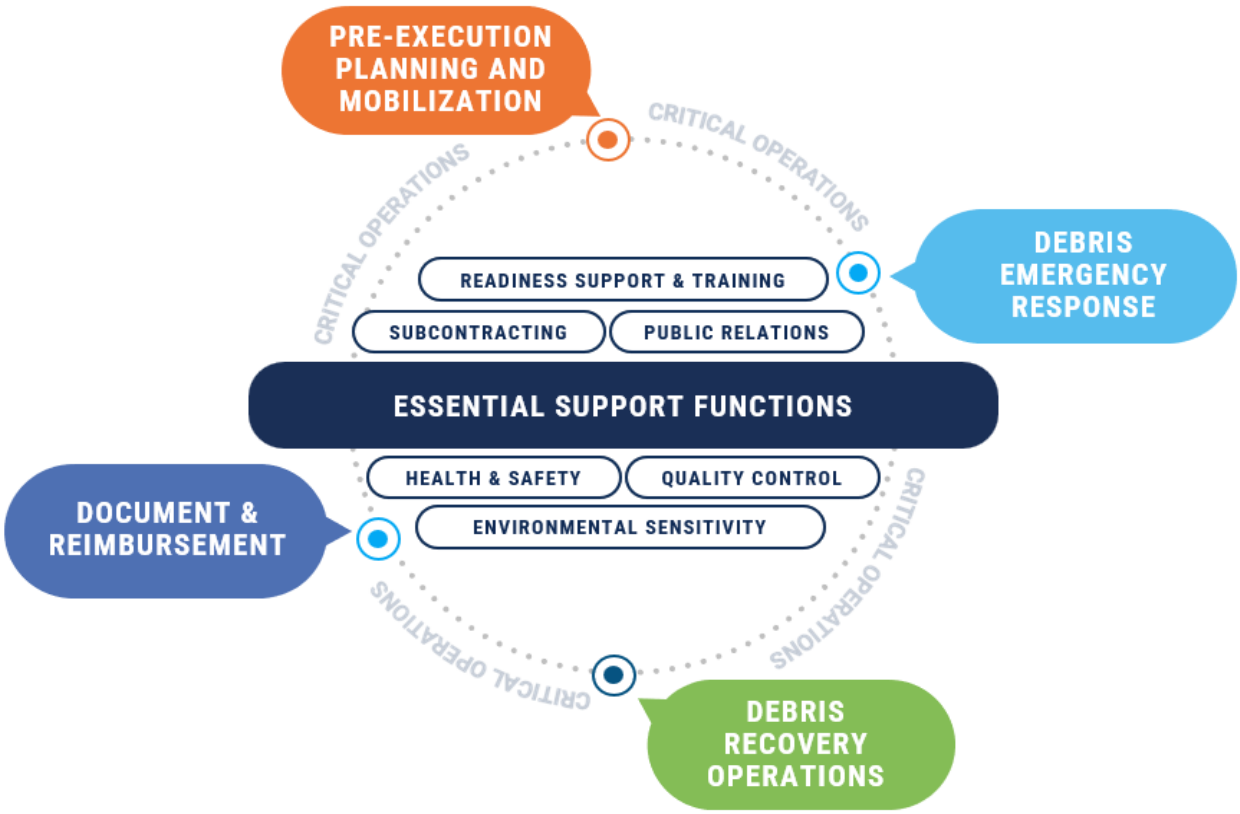
The amount of damage that occurs during a natural disaster and the effort required to restore the affected areas varies with each situation. CrowderGulf's comprehensive **Debris Management and Operations Plan is a flexible strategy that integrates Critical Operations and Essential Support Functions** to ensure the most efficient and cost-effective debris management for the City of Destin. These Operations and Functions are identified below and fully defined in the following sections. Each is integral to a comprehensive debris management effort.

Critical Operations *(action items that are set in motion by an event)*

- Pre-Execution Planning and Mobilization
- Debris Emergency Response
- Debris Recovery Operations
- Documentation and Reimbursement

Essential Support Functions *(support functions for Critical Operations)*

- Readiness Support and Training
- Subcontracting
- Quality Control
- Health and Safety
- Environmental Sensitivity
- Public Relations



The **Debris Management and Operations Plan** was developed with only one objective – **to assist Clients that have suffered the effects of a disaster return to normal as quickly, as efficiently and as inexpensively as possible.** The Plan's components have been the cornerstone of CrowderGulf's disaster relief efforts for the past 50 years. When an event is likely to occur, all stakeholders are put on alert and resources are marshaled. Immediately after the event occurs, Mobilization of personnel and equipment resources begins in anticipation of the initial Debris Emergency Response or "PUSH" period. As additional resources flow to the impacted areas, Debris Recovery Operations – the most demanding phase - is initiated. This is the phase in which CrowderGulf delivers what it has promised and makes certain that debris is removed and reduced as quickly and as efficiently as possible. Throughout the operation, the Documentation of all work must be completely and accurately documented for Reimbursement to occur.

The four Critical Operations described here - **Mobilization, Debris Emergency Response, Debris Recovery Operations and Documentation and Reimbursement** - form the central core of the CrowderGulf Debris Management and Operations Plan. These elements are supported and enabled by six Essential Support Functions. Although not as visible during the debris management process, each support function - **Readiness Support and Training, Subcontracting, Quality Control, Health and Safety, Environmental Sensitivity, and Public Relations,** - is fundamentally important to CrowderGulf being able to provide a successful debris management effort. All these elements are discussed briefly in the following sections.

CRITICAL OPERATIONS

➢ Pre-Execution Planning & Mobilization

Alert and Team Notifications

If there is advanced notice (i.e., a hurricane), this phase will commence as soon as a disaster appears to be a credible threat to the City of Destin. The CrowderGulf call-down list will be checked to verify accuracy. Field Project Managers and Field Supervisors will be advised to check e-mail and voice mail at least twice a day, and additional communication devices and cell phones may be distributed to key personnel. The CrowderGulf Director of Operations will assess the information received from the National Weather Service and in consultation with the City's Debris Manager will determine the necessity for a full notification action. If it is determined that notification is needed, he will direct activation of the CrowderGulf Calling Plan with stand-by instructions for individual contractors/subcontractors to be notified. Specific individuals will be called, and, in turn, they will call additional CrowderGulf employees in a rapid cascading manner. This list of calling assignments is kept current with no less than two exercises per year if not exercised for a legitimate activation preparation.

Preparation and Pre-Execution Planning

Based on the high probability of a known event, the Director of Operations (DO) will direct initial preparation of manpower and equipment. He will inform all responding personnel as to situation status, departure, tasking and assets to mobilize. The Director of Operations will manage the commencement of mobilization, the tasking of the support units, and the dispatch of managers, crews and equipment.

Mobilization of Resources

CrowderGulf shall contact the City's Debris Manager a minimum of 48 hours prior to a hurricane event or immediately upon the occurrence of a major disaster or debris generating event in which there is no advance warning. Mobilization will take place immediately upon receipt of a NTP and in accordance with the requirements as defined by the City's Debris Manager. Within eight hours of receiving the NTP, CrowderGulf management team will be working on site with the City and its Debris Manager to begin planning the required mobilization and operations for debris removal. Debris removal from streets and roads ("PUSH") shall begin within 12 hours of receipt of the NTP and reduction and disposal operations shall be in full operation within 48-72 hours.

The severity of the disaster will determine how many employees and/or subcontractors will be assigned to a specific disaster event. Depending on the scope of the disaster, CrowderGulf will use a combination of company crews and subcontractors to perform work. We will begin with CrowderGulf personnel and proceed to add additional manpower and subcontractors until we have a sufficient workforce in place to effectively manage and handle the disaster recovery effort. Specific management personnel that will be assigned to this contract are provided in later sections of this proposal.

Ongoing Communication Within CrowderGulf

To ensure that all clients are being served and CrowderGulf personnel are involved and knowledgeable about any needs and/or concerns, Reid Loper, our Senior Vice President, or designee, hosts a daily planning, operations and coordination call for all Senior Management Staff, Field Project Managers and Support staff to identify any areas of improvement, shortfalls in staffing or resources and resolve any critical issues that need to be addressed.

Microsoft Teams software is used for daily calls, which allows for real-time communication regardless of where the participants are located. These calls help facilitate information sharing across the company which incorporates a commitment to continual learning, programmatic improvements that support our readiness and response, adaptability, strengthens internal and external communications, and client relationships as well as improving CrowderGulf's mission delivery.

Mobilizing Large Workforces

Company-owned/Leased Equipment

CrowderGulf maintains a large inventory of company-owned/leased equipment that is debris specific and available for immediate response to a disaster. Company-owned/leased equipment will be pre-positioned for emergency PUSH operations and dispatched to the disaster area immediately upon the receipt of a NTP to begin restoring critical services in the City of Destin as quickly as possible.

All equipment needed to restore the City after a disaster event will be immediately available upon NTP. This includes specialty equipment as needed to restore parks and other sensitive areas within the City without damaging property.

The following is a partial list of company-owned equipment available for use in any debris operation:

EQUIPMENT	UNITS
• Self-Loading Trucks; (130 – 160 cubic yards)	90
• Dump Trucks (16 yards – 50 yards)	153
• Rubber Tire Loaders (equipped with debris handling grapples)	26
• Rubber Tire and Track Equipped Excavators (with buckets and grapples)	18
• Pick-Up Trucks (equipped with portable phones for Foremen)	40
• Service Trucks	12
• Skid-Steer Loaders (equipped with buckets and grapples)	20
• Cherrington Beach Cleaners 4500 & 4500 XL	5
• Stationary Power Screens – (sand screener)	2
• Diamond Z 14' Tub Grinders	6
• Shallow and deep-water boats equipped with latest sonar and photo equipment	4
• Barges, tugs and large boats for heavy marine debris removal	4

Equipment Rental Agreements

CrowderGulf also maintains active accounts with all major national equipment rental companies to supplement equipment needs as may be required (i.e. Beard, Hertz, Caterpillar, John Deere, United Rental, Sunbelt, etc.).

All equipment shall meet all federal, state and local regulations.

Additional Equipment Information

- All equipment used for this contract will be rubber wheeled, or rubber tracked unless otherwise approved by the City.
- To the maximum extent possible, CrowderGulf and its subcontractors shall use self-loading trucks with grapples or grapple attachments. Hand loading will not be permitted.
- No subcontractor will be allowed to solicit work from private citizens while assigned to the contract.
- No equipment assigned to this contract will be used for any other contract work.
- All trucks will be marked with proper signage. The lettering will be 3 inches in height or greater to allow for readability and clarity.

Anticipated Outside Support/Subcontractor Equipment

CrowderGulf's has developed a Nationwide Database of Approved and Trusted Subcontractors & Vendors. It is company policy to utilize **qualified local subcontractors** to the maximum extent possible in compliance with **44 CFR 206.10**. We also try to employ a percentage of qualified Minority Business Enterprise (MBE) subcontractors. In previous disaster activations, CrowderGulf has pre-positioned manpower and equipment to provide immediate response. The table below provides the number of subcontractors, and their equipment listed in our database, in relation to the State of Florida.

Florida Subcontractor Statistics	Regional	FL	U.S 2025
Number of Registered Subcontractors	80	1030	3393
Florida Subcontractor Statistics	**Regional**	**FL**	**US. 2025**
Dump Trucks (16-65)	102	5408	19576
Self Loaders 30-90 CY/90-170 CY	45	1168	7652
Tub Grinder 800+HP	4	144	635
Horizontal Grinder 800+HP	1	21	37
Service Trucks, w/fuel, tools	15	203	325
Wheel Loader 50hp – 150hp	121	1835	5964
Mini Excavator w/thumb or grapple	9	122	200
Excavators	166	1505	7149
Skid steer 40 hp – 80 hp	129	2239	9176
Bucket Trucks	25	960	3714
Chipper, with 12 inch minimum	16	326	1657
Dozers, 2-3 yd blade/root rake D7	102	1063	3785
Grader, Motor, 12 ft blade 130-140hp	12	172	790
C&D Walking Floor 80-110 CY	5	502	2152
Mulch Trailer 80-110 CY	8	430	1561
Water Truck	12	236	1025
Pick up w/ dump trucks	88	1639	5484
Trailer Mounted floodlight	27	323	2422
Low-bed Trailer w/ tractor	48	673	1025
5 ton Pickup truck	148	2232	1800
Barges	7	260	1656
Work Boats	24	174	1278
Vacuum Trucks	25	234	1427
Air Curtain Burner	6	107	385

Florida Subcontractor Statistics	Regional	FL
Small Business	51	751
M/WBE, HUB, SDB or Veteran Certified	51	556
Push Crews	42	482
Debris Haulers	64	861
Marine Debris	3	33
Haul Outs	8	129
Grinding	9	79
Tree Work	16	180

Staffing the Emergency Operations Center

CrowderGulf will commit a senior employee to be stationed in the City's Emergency Operations Center (EOC) to coordinate plans for debris operations, communications and scheduling with the City's Emergency Management personnel. If requested by the City, this senior management representative will be on site in the Emergency Operations Center prior to storm landfall.

Staging of Resources

When a disaster is imminent, we will review the need for staging equipment within a safe distance (100-150 miles) from the potential area of impact. Local equipment and resources will be secured in safe locations and ready for mobilization. As soon as the storm passes the area and a Task Order (TO) issued, equipment and manpower will be staged at a convenient location near the truck certification area for the City.

Very early in the mobilization process, CrowderGulf will obtain a large hard surfaced parking area which will be used as a staging area to begin truck and equipment certification and safety inspections. These important steps must take place in advance of moving debris on a unit price payment basis.

The staging area becomes the initial reporting location for all subcontractors. Subcontractors employed under pre-event subcontracts, subcontractors and individuals seeking work, and potential suppliers and vendors, will be directed to this central point. If necessary, we will position a Mobile Emergency Response Command Center Unit at this location to facilitate operations. Additionally, if temporary fueling and shelter facilities are required, they will be positioned at this location, if possible.

Communications/Mobile Command Center

Should disaster conditions warrant the need, CrowderGulf may establish a self-sufficient Mobile Command Center, with full **communications capability,** in the disaster area and dedicate it solely to the recovery effort. The CrowderGulf Command Center is a state-of-the art Prevost bus that provides living quarters and a fully functioning office space for our key management personnel. The Command Center gives CrowderGulf the ability to position key people in disaster areas that are otherwise uninhabitable. This invaluable tool allows CrowderGulf to provide our clients with unmatched response times when it matters most.

Operational Support

CrowderGulf's main office will serve as headquarters for "back-office" operational support and documentation center. Throughout the project, this office will support field operations on all levels and maintain backup files and records for reimbursement.

Sample Mobilization Parameters

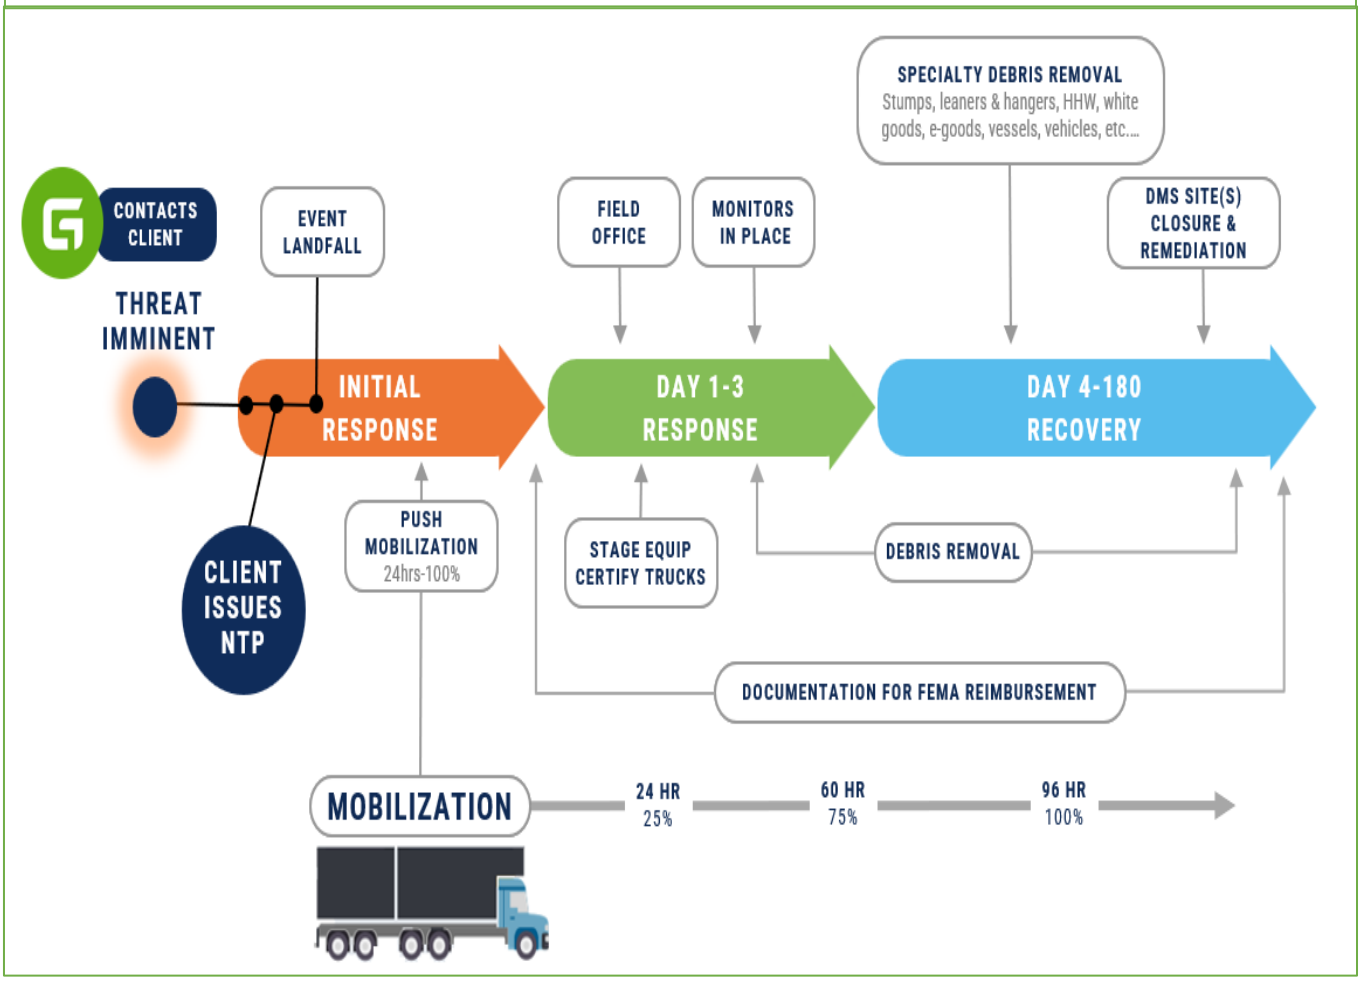
Below are CrowderGulf's anticipated mobilization timelines for debris removal work. CrowderGulf has never failed to meet the end timelines for completing all projects and remains committed to meeting all timelines.

- Contacting the City's Emergency Operations Manager 48-72 hours prior to a predicted disaster event.
- Providing onsite Operation Managers to the City's Emergency Operations Center 24-48 hours prior to a predicted disaster event or upon receiving notification of pending activation, if requested.
- Staging personnel and equipment in close proximity to the City to provide rapid deployment after the storm, while protecting those assets from damage/destruction by the event.
- Mobilizing resources and being operational for clearing debris and opening critical routes ("PUSH") within 24-48 hours of NTP if requested by the City.
- Being fully operational for hauling, sorting, and storing debris within 48 hours of initial NTP.
- Being fully operational for reduction and disposal of debris within 72 hours of initial NTP.
- Maintaining full operational capability, 24 hours per day, 7 days per week for an extended period of time.

- Being able to clear all debris from all City maintained streets, roads and highway rights-of-way within 90 days from initial NTP.
- Rapidly adjusting the flow of resources based on the extent and magnitude of damage/debris.
- Providing Rapid Response Crews (RRC) as may be required.
- Being able to complete the entire debris management process from initial clearance through final disposal within 180 days of initial NTP or sooner as determined by the City's notice to proceed.

SAMPLE Response and Recovery Timeline

Debris Removal, Reduction and Disposal Operations



Because each activation / storm presents separate challenges and situations, the above information has been provided as a sample. During our pre-event training sessions with the City, we will work to frame out possible timelines for minor and major activations.

➢ Debris Emergency Response

Debris Response activities occur immediately after an event to clear emergency access routes. This initial phase of operations normally consists of clearing debris that may hinder immediate lifesaving actions within the disaster area and/or pose an immediate threat to public health and safety. The Debris Response phase includes immediate actions for the removal of debris to facilitate search and rescue efforts, allow access to critical facilities, and prevent flooding. Actions required during the response phase are usually completed within a matter of days following a disaster event. During Debris Response, CrowderGulf will conduct an emergency "PUSH" of critical streets and roads sufficient to allow for the movement of emergency vehicles. "PUSH" crews can be on-site and working within hours of an event. City staff shall determine priorities for "PUSH" activities with primary emphasis on major thoroughfares. Multiple crews will be conducting emergency "PUSH" activities within 24 hours of receipt of an NTP.

Requirements for government services increase dramatically following a major disaster. After emergency access has been provided to hospitals, police and fire stations, the next priority normally is to open access to other critical community facilities, such as schools, municipal buildings, water treatment plants, wastewater treatment plants, power generation units, airports and seaports.

As soon as critical facility locations are identified, CrowderGulf will dispatch "clearing crews". Depending on the damage, multiple crews will be deployed within 24-48 hours of receiving an NTP. The "clearing crews" will use all available resources with focus on local personnel and firms. Each "clearing crew" at a minimum will consist of:

- Two pieces of rubber-tired pushing / loading equipment such as backhoe loaders, rubber tired front-end loaders, and skid steer loaders with operators
- Two - three chain saw operators, laborers, flaggers with transport vehicles
- Five 16 to 20 cubic yard capacity dump trucks with drivers
- One Quality Control/Foreman with communications capability and pickup truck
- Equipment and resources needed to transport crew from one site to another

To maximize efficiency, the clearing crew may, depending on the size of the roadway and severity of damage, split into two work teams clearing at different locations on the same street or road. If a crew divides into two work teams, visual contact and effective radio or cellular communication will be maintained between the teams.

When needed, Search and Rescue Support Crews will be provided. At a minimum, each crew will consist of the following:

- One track hoe excavator, minimum 150hp with operator,
- Three laborers/riggers
- One crew foreman
- Slings, riggings, implements
- Transport equipment

The safety of the clearing crews in this early stage of work will be a paramount concern. Downed power lines, falling trees, equipment and chain saw injuries, worker fatigue, and a host of unanticipated hazards demand constant attention by all team members. Therefore, **toolbox safety discussions** will be a **daily requirement** for the team. Work areas will be surveyed for hazards before work begins and throughout the clearing operation. Special hazard observation responsibility will be assigned to the Quality Control Manager.

The following is an example a Debris Response priority list with an Operational Triage approach:	
Primary	**Secondary**
• Fire, police, and ambulance service routes	• Major arterial routes
• Access routes to hospitals, trauma units, and nursing centers	• Utility access routes
• Routes to the emergency operations center	• Communication towers and systems access
• Routes to government facilities	• Routes to shelters
• Supply routes to emergency supply distribution centers	• Routes to the disaster debris management sites (DMS)

All Emergency Road Clearance Objectives will be handled with the same quality, commitment, and close-coordination CrowderGulf employs in all its operations. Priority objectives typically involve the human element of storm response, and the emergency personnel and services that are an integral part of Public Safety both before and after an event. Resources will be allocated based on exigent need, and by City request. All other feeder roads and residential streets are normally cleared as soon as the emergency and major access routes are cleared, and the City transitions to the recovery operations.

"I would like to Thank you all, Ashley and her staff, for all of your help in providing information and documentation needed to close out our 2004/2005 Hurricanes with FEMA. It is comforting to know that we can rely on your company to provide accurate information 4 to 5 years after the fact."

Jesse Wright, Village Supervisor
Village of Wellington, FL

➢ Debris Recovery Operations

Debris Recovery consists of the removal and disposal of FEMA eligible storm generated debris to ensure the orderly recovery of the community and eliminate less immediate threats to public health and safety. The debris removal, reduction and disposal procedures are addressed in specific detail in the following paragraphs.

Important Operational Considerations: At this point in the operation, decisions regarding the movement, storage, reduction and disposal of the debris will have a huge impact on the efficiency and effectiveness of the overall project. As in all CrowderGulf debris operations, we apply a set of standard principles to managing debris operations which include but are not limited to the following:

- Never load debris on a truck before the Debris Management Site (DMS) or Landfill has been identified.
- Handle only debris that meets FEMA's eligibility criteria.
- Sort debris before initial loading, whenever possible, to increase efficiency.
- Clean streets/roads thoroughly at each pass, i.e., "Clean as You Go" policy.
- If possible, load debris only once and deliver it directly to the final disposal site.
- Use temporary debris management sites (DMS) only when they increase operational efficiency.
- Use the most efficient reduction method approved by the client.
- Recycle if costs to benefits are favorable.
- Use privately-owned or, if available, publicly owned landfills for final disposal.

Collection Methods

The fundamental component of a debris management plan is the collection of debris. Implementation of debris collection immediately after a disaster event will assure the public that recovery efforts are in progress and that the community will return to normal quickly. The debris type, amount, and urgency determine which collection method is used. The two main methods of debris collection are curbside collection and collection centers. Both types of collection methods may be used and will be determined by the City of Destin.

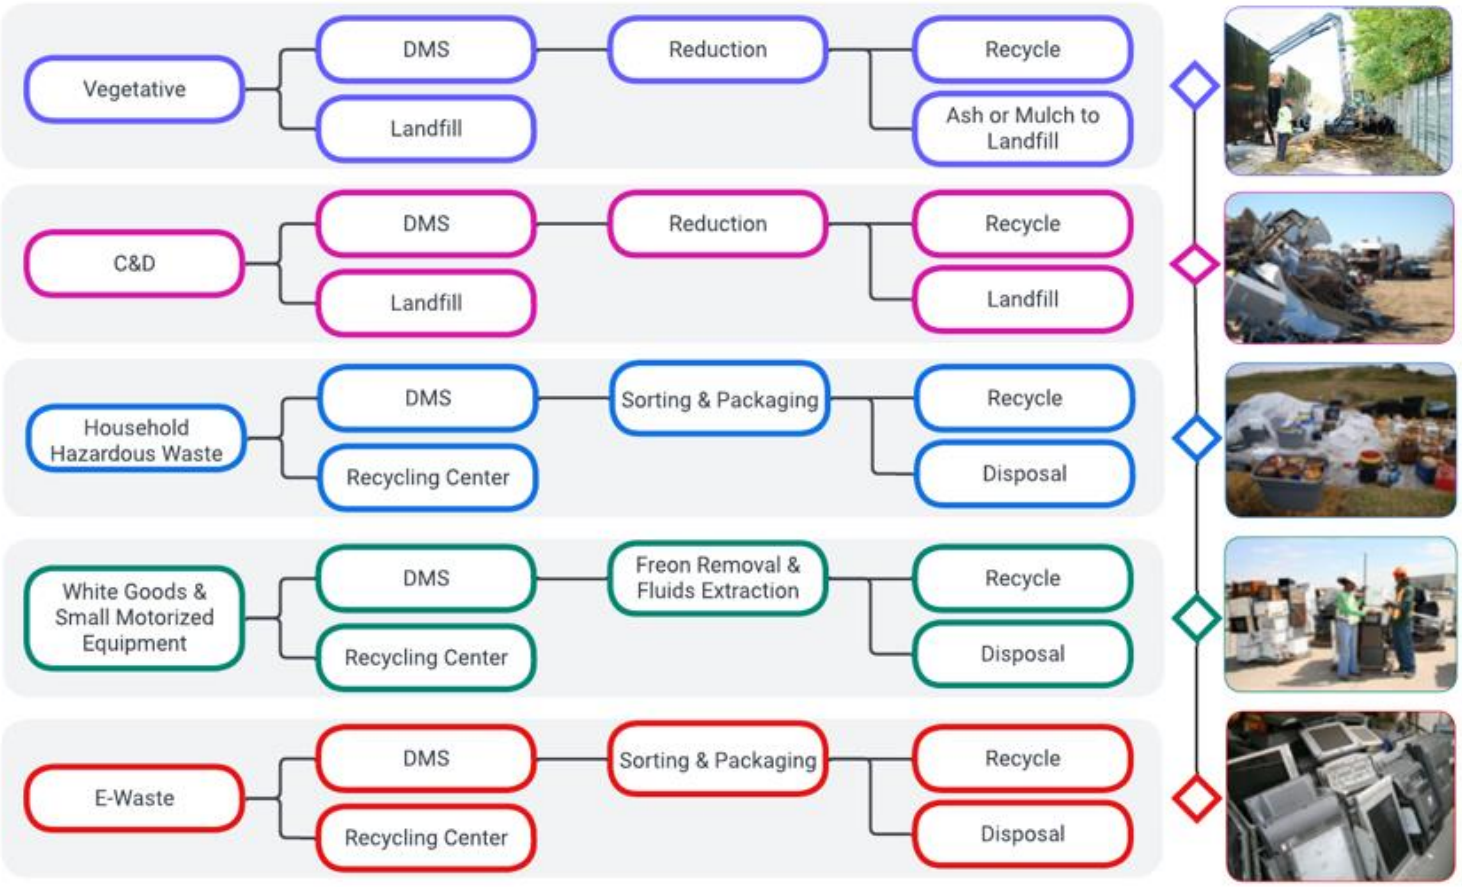
Curbside collection requires that only storm related debris be placed at the curb or public rights-of-way. *Source-segregated debris collection* offers the potential of high salvage value and efficient recycling/reduction processing. This method is important when collecting hazardous and environmentally sensitive debris, such as household hazardous waste and white goods. *Collecting mixed debris (veg & C&D)* allows residents to place all debris types in one specified area, usually along the public rights-of-way in front of their residence. While this is the most convenient for the public, it does not facilitate effective recycling and reduction efforts. Anytime vegetative debris is mixed with C&D, FEMA requires that the load be called C&D. When debris is mixed, recycling and reduction efforts are often prolonged and operational costs are increased when crews can separate the mixed debris.

Collection Centers, the second type of collection method, relies on having residents transport their debris to a common location. Large roll-off bins may be placed on public rights-of-way or public property for the residents to bring their debris for collection. Separate bins can be designated for particular types of debris. If Collection Centers are used, they must be monitored to ensure that all debris is storm-related eligible debris and owned by citizens of the City.

Regardless of the collection methods used, educating the residents before a disaster occurs and keeping them informed after a disaster about the how, when and where of debris removal operations will alleviate a lot of stress for everyone. CrowderGulf can assist with keeping the public informed with the information needed to get their debris removed safely and in a timely manner.

Debris Types

The City of Destin will determine the scope of the debris to be managed under this contract. However, CrowderGulf is prepared to assist the City in hauling, reducing and disposing of all eligible debris types in accordance with FEMA Public Assistance Program and Policy Guide. These include vegetative debris, construction & demolition (C&D) debris, hazardous waste, white goods, household hazardous waste (HHW), electronic waste, abandoned vehicles and vessels, putrescent debris, infectious waste, chemical, biological, radiological, and nuclear-contaminated debris. The following diagram is a breakdown of the general **debris stream**:



Truck Certification

All debris hauling trucks will be certified by the City or a City representative/debris monitoring firm before any hauling begins. The inside bed dimensions of all trucks will be accurately measured, and all safety requirements will be checked and approved. This information along with the description and a picture of the truck, driver's name, license and tag number will be recorded on the FEMA compliant certification forms provided by CrowderGulf. The City will retain the original copy of the form and provide CrowderGulf and the driver with copies. The driver's copy must remain in the truck at all times. A placard displaying the truck's identification and measurement information will be displayed on both sides of the vehicle at all times. Specific truck documentation requirements are discussed in the **Documentation and Reimbursement** Section of this proposal.

Sectoring and Crew Assignments

Upon NTP, CrowderGulf will assist the City in assessing damage and developing a specific plan of action. The damaged areas will be divided into sectors and crews, subcontractors, and equipment will be assigned. All areas will be served simultaneously.

Loading Debris

Prerequisites for Loading Debris:

- Truck certification and safety inspections completed on all trucks hauling debris
- Identification of disposal site
- If needed for efficiency, identification and preparation of debris management sites
- Sectioning of City with subcontractor assignments
- Quality Control organization operational
- Load ticketing and data management process operational
- Accident Prevention Plan (APP), Site Safety and Health Plans (SSHP), Activity Hazard Analyses (AHAs)
- Initial safety and health briefing for all personnel complete
- Specific training on traffic control complete for all debris crews
- Preparatory inspections of each worksite by Quality Control staff and debris crew foreman
- Work area cleared of safety and health hazards such as downed power lines and hazardous materials
- Inspection of work area for water meters, fire hydrants, utility pedestals and other infrastructure components that could be damaged by equipment
- FEMA debris eligibility criteria communicated to all Crew Foremen, Superintendents, Quality Control staff, Project Managers, and Equipment Operators
- Overhead power lines and other utility lines identified for safe clearance of loading equipment

Crew Composition

CrowderGulf matches equipment to the requirements of the task. Crew composition varies depending on the type of equipment used in performing the loading operation. For example, crews with self-loading trucks do not need separate loading equipment that is required to support a crew consisting of dump trucks or trailers. However, every crew requires traffic control personnel, a foreman and a designated quality control person. Also, each crew requires a chain saw operator and laborer(s) to assist in the ground support work. Usually each piece of loading equipment (self-loading truck or separate loader) is supported by one saw operator, two laborers and two flaggers. At a minimum, debris separation crews will consist of two laborers, one chain saw operator with saw, one skid steer loader with operator and implements, all equipment necessary to transport personnel and equipment from one work site to another. When necessary, ground crews will separate and sort the debris by type, saw fallen trees and vegetative debris at the public rights-of-way, and be constantly alert for water meters, fire hydrants, utility pedestals and other infrastructure components that could be damaged by equipment.

Crew Sizes

The size of debris loading crews will be dictated by the severity and localization of damage. Each crew foreman will be experienced in organizing and directing debris crews and will be provided with sufficient chain saw operators, flagmen, laborers and knuckle boom operators to assure rapid and efficient debris removal.

An example of a Crew is demonstrated in the chart below:

Manpower/Equipment Required	Task Responsibility	No. per Crew
Crew Foreman with experience in organizing & running crews with previous work in disaster related jobs	Provide on-site management of crew to ensure quality performance, safety & maximum productivity	1
80 - 140 CY self-loader trucks &/or 20 – 60 CY dump trucks, all with skilled, experienced operators	Pick up debris from curbside & haul to DMS or final disposal	4-6 (or as area dictates)
Chain Saws & Experienced Operators (as needed)	Reduce large trees & limbs to manageable size & trim debris hanging from loaded trucks	1-2
Flagmen	Direct traffic flow & truck movement	3-6
Laborers	Gather small debris that loaders are unable to grasp	2

Truck and Equipment Considerations

The number of debris hauling trucks assigned to each crew will be determined by the time required to transport a load of debris to the disposal site, dump the load and return to the loading site. Sufficient trucks or trailer hauling equipment will be assigned to each crew to preclude having idle loading equipment. If hauling equipment is found idle and frequently waiting to be loaded, some of the hauling equipment will be reassigned to other crews. Crews will be adjusted as needed to maximize the use of all trucks and equipment.

Often, on the first pass of debris removal operations, large stumps, tree trunks and other heavy debris must be left for loading by larger more specialized equipment. Crews will make every attempt to "Clean as You Go", however, there are situations when the need for expedient debris removal precludes achieving this standard completely. As required and directed, specialized equipment will be mobilized on subsequent passes to handle the removal of stumps, other large debris and backfill of stump holes.

Truck Drivers will not be issued a load ticket until:

- The tailgate is secured to prevent debris from falling out of the truck while enroute to disposal site
- The trimming of overhanging limbs and debris from around the truck or trailer is complete. This includes debris protruding from the truck bed that may pose a risk of utility line damage. (Actual height depends on local line installation height)
- The debris hauling container is loaded as completely (fully) as safely possible

Once the load ticket is issued, the truck driver will safely move the vehicle out of the loading zone and into normal traffic flow in route to the disposal site or to a Debris Management Site (DMS).

Repair and Maintenance Equipment

CrowderGulf can perform maintenance and repair in the field where the work is happening. In the aftermath of a disaster, circumstances may prohibit local businesses from being available. The local resources may have experienced personal and/or business damage that take priority. To guarantee that we have safe, functioning equipment at all times, CrowderGulf has built a large support system of service trucks for our company-owned equipment and subcontractor equipment, should they need assistance.

Service Trucks - CrowderGulf often utilizes our fleet of smaller service vehicles. These are typically one plus ton trucks outfitted with specialized equipment to make field services easier to complete. Features of these trucks include the following:

- Air Compressors
- Lubricant
- Welding Equipment
- Exhaust and other Fluids
- Boom Cranes
- Small Tools
- Tommy-gates
- Misc. Small Parts

"From this resident, we thank you and all your crews for keeping the recovery from being another disaster, as often happens. It has been a pleasure having your team in our backyards."

Citizen, High Island, TX

Box Service Trucks - When a repair or service requires heavier equipment and additional support, CrowderGulf provides our "box trucks" which have several different types of equipment to allow the CrowderGulf employed full-time mechanic more options when conducting repairs. These units typically keep the following supplies on hand:

- Large air compressors
- Exhaust & other fluids
- Welding Equipment
- Several sets of various size tires
- Hydraulic hose crimping machines
- Hydraulic lines
- Small tools
- Hoses
- Lubricant
- Fittings
- Lift gates
- Misc. Small Parts

Mobile Repair Shop

CrowderGulf also owns a state-of-the-art mobile repair shop. This is a larger unit, towed by a semi-truck. Once set up in an area, this unit performs the same as a shop. The features of this unit are self-contained, diesel-powered electrical system, full hydraulic hose manufacturing ability, tool room, tire racks, outside flood lighting, and many other features that allow this unit to function like a full featured automotive repair shop. No matter the situation, CrowderGulf can utilize in-house assets to maintain our fleet during any size activation.

Hauling Debris

The hauling or transport process begins at the time the truck or trailer leaves the "loading zone". Safe transport of debris material to the disposal site becomes the drivers' primary concern. Drivers remain responsible for their loads until safely dumped at the disposal site.

All drivers will follow the most direct and safe pre-planned route to the nearest disposal site. Particular attention to safety is required in the areas near school buses, school zones and other areas of pedestrian foot traffic. Tarps or load covers are applied as required by local or state regulations.

On arriving at the disposal site, the driver will maneuver the hauling container for inspection by a City representative in the inspection tower. The load will be "called" by the City representative estimating the percent of the full volume or by estimating the number of cubic yards short of full volume. Drivers working for CrowderGulf are instructed never to disagree or complain about the load "call". Any concerns the driver has are to be directed to his or her crew foreman or supervisor for resolution.

When the debris is safely delivered to the disposal site, it will be mandatory to dump the load only when the truck and trailer are level. This prevents the dangerous hazard of trucks and trailers tipping over. CrowderGulf will employ spotters at the dumpsite to assist drivers in dumping safely.

When the dumping process is complete, the driver will maneuver the hauling container back to the inspection tower for a quick check to make sure all debris has been removed during the dumping process. Any debris hung in the truck or trailer bed must be removed before the truck or trailer leaves the disposal site.

All dumpsites will have a dumpsite manager to supervise and oversee the daily operations. A safety officer will also be onsite to ensure all safety measures are being executed. Flaggers will be strategically placed at the site to direct traffic flow safely into and out of the disposal site.

Debris Hauling Prerequisites:

- Debris will only be transported in trucks or trailers capable of rapidly and mechanically unloading.
- No self-load trailers will be used. Exceptions to this standard may be necessary to efficiently and safely transport HHW, E-Waste, ACM or white goods.
- All trucks and trailers hauling debris must have completed the truck certification process establishing approved volume for the debris-hauling container.
- All trucks and trailers must have successfully completed the prescribed Safety Inspection.

- Drivers will be instructed to use the most direct and safe route to the nearest disposal site.
- Drivers will be required to wear safety vests and steel-toed shoes when working.
- If loads are required to be covered during transport, the hauling container must be equipped with a functional cover or "tarp" to prevent flying debris during transport.

Note: *Proper trimming of loads at the loading site is the best prevention for debris falling out during transport.*

Safety Measures

The Safety Manager and Safety Officers will monitor all safety procedures and daily reports of accidents and/or property damage. The Safety Manager or designee will also be responsible for coordinating and conducting safety meetings with crew members and subcontractor personnel. Safety is critical throughout all operations and is discussed later within this **Debris Operations Plan.**

Truck and Equipment Maintenance

Well-maintained trucks and equipment are essential for efficient operations. CrowderGulf's crew foremen, subcontractor foremen, and the Field Project Manager will be responsible for keeping all trucks and equipment in good working condition and prepared for each workday. A CrowderGulf mechanic will be on the job for troubleshooting and maintenance of equipment. Local mechanic shops may also be utilized.

Traffic Control

CrowderGulf will use its best efforts to mitigate the impact of debris removal operations on local traffic. Sufficient signing, flagging, barricading, safety equipment and communications devices will be used to ensure the safety of vehicular and pedestrian traffic in all work areas. All work shall be done in conformity with applicable federal, state, local laws, regulations and ordinances.

Hours of Operation

Debris will be collected and loaded during visible daylight hours (dawn to dusk) seven days per week. Debris reduction at the DMS may take place 24 hours per day, seven days per week, if required or requested and approved by the City.

Number of Passes

CrowderGulf will make as many passes as the City may direct in order to successfully complete the debris removal process. Normally, a few days may need to elapse between each pass so that the citizens have time to get their debris to the Right of Way (ROW).

Daily Coordinated Issue Management Meetings

Daily meetings will be held between the Field Project Manager, Field Supervisors, the Subcontractor Crew Foremen and representatives of the City of Destin to discuss progress, needed adjustments and other issues. Decisions to increase/decrease manpower and/or equipment or change work areas will be made with approval of the City.

Accurate Record Keeping

CrowderGulf utilizes several systems to assure accurate truck certification and debris hauling information. Production reports, shift inspection checklists, safety meeting reports, quality controls, and daily crew and equipment usage reports are some of the Quality Control measures used to provide accuracy in the documentation process.

Using the most appropriate technology provides the necessary information to make decisions during the recovery operation. It also improves our ability to provide all documentation needed for maximum reimbursement from FEMA and other agencies. Details of our documentation procedures are fully described in the ***Documentation and Reimbursement*** *section of this proposal.*

Documenting and Resolving Damages

During the debris removal process there will always be some minor damage situations that occur regardless of the care taken during work. CrowderGulf will respond quickly to all damage claims by the City or its citizens and will work diligently to resolve such claims to the satisfaction of all involved. We are aware of the trauma and disruption to normal lifestyles that result from a natural disaster. Our personnel are thoroughly indoctrinated regarding our policy to always be caring, courteous, polite, and responsive to the needs of the citizens of the community.

Citizens will be provided with an avenue to report damages. One option will be a citizens' hot line. The City, the monitoring company or CrowderGulf may provide the hot line. Regardless of the method chosen to provide the information, CrowderGulf is committed to resolving the damage complaint as quickly as possible to the satisfaction of the City and its citizens.

We will employ a Claims Resolution Person (CRP) to handle all property damage that may occur during the recovery process. If possible, a local resident with excellent communication and negotiating skills will be employed to fill this position. This person will be tasked with responding to and amicably resolving all incidents that may occur.

Debris Management Site Development

CrowderGulf has vast experience with selecting, developing, managing and operating Temporary Debris Management Sites. We are committed to efficient and safe DMS operations and require all personnel to be vigilant in always using safe practices. In the context of this proposal, the terms **"*Temporary Debris Separation and Reduction Site*"** and the term **"*Debris Management Site*" (DMS)** are used interchangeably. DMS are established when debris cannot be taken directly from the collection point to the final disposition location. A DMS is a location to temporarily store, reduce, separate, and/or process debris before it is hauled to its final disposition.

DMS Site Selection

Site selection is probably the most important decision affecting DMS operations. CrowderGulf will work closely with the City of Destin to identify and secure suitable locations. Specific Site Plans will be developed for each DMS either upon activation or upon request by the City and will be in compliance with FEMA Public Assistance Program and Policy Guide for site plan development.

Once site selection is approved by the appropriate Debris Managers, CrowderGulf will perform baseline environmental testing protocols as required and will obtain any required special permits and environmental permissions. Costs associated with the preparation, operation, and restoration of DMS's are addressed in the unit price schedule. Unless otherwise denoted, the cost for DMS restoration is handled as a pass-through cost, with no markup. Site selection should be based on the following criteria:

- Ownership
- Potential for Land Lease Agreements
- Size
- Location
- Environmental and historic concerns (baseline study findings)
- Required Permits

DMS Design and Operational Features

The information gathered during the baseline data collection becomes important to the design of the site. The efficiency and overall success of DMS operations is determined by how the site is designed.

A minimum of the following features will be designed into the DMS plan.

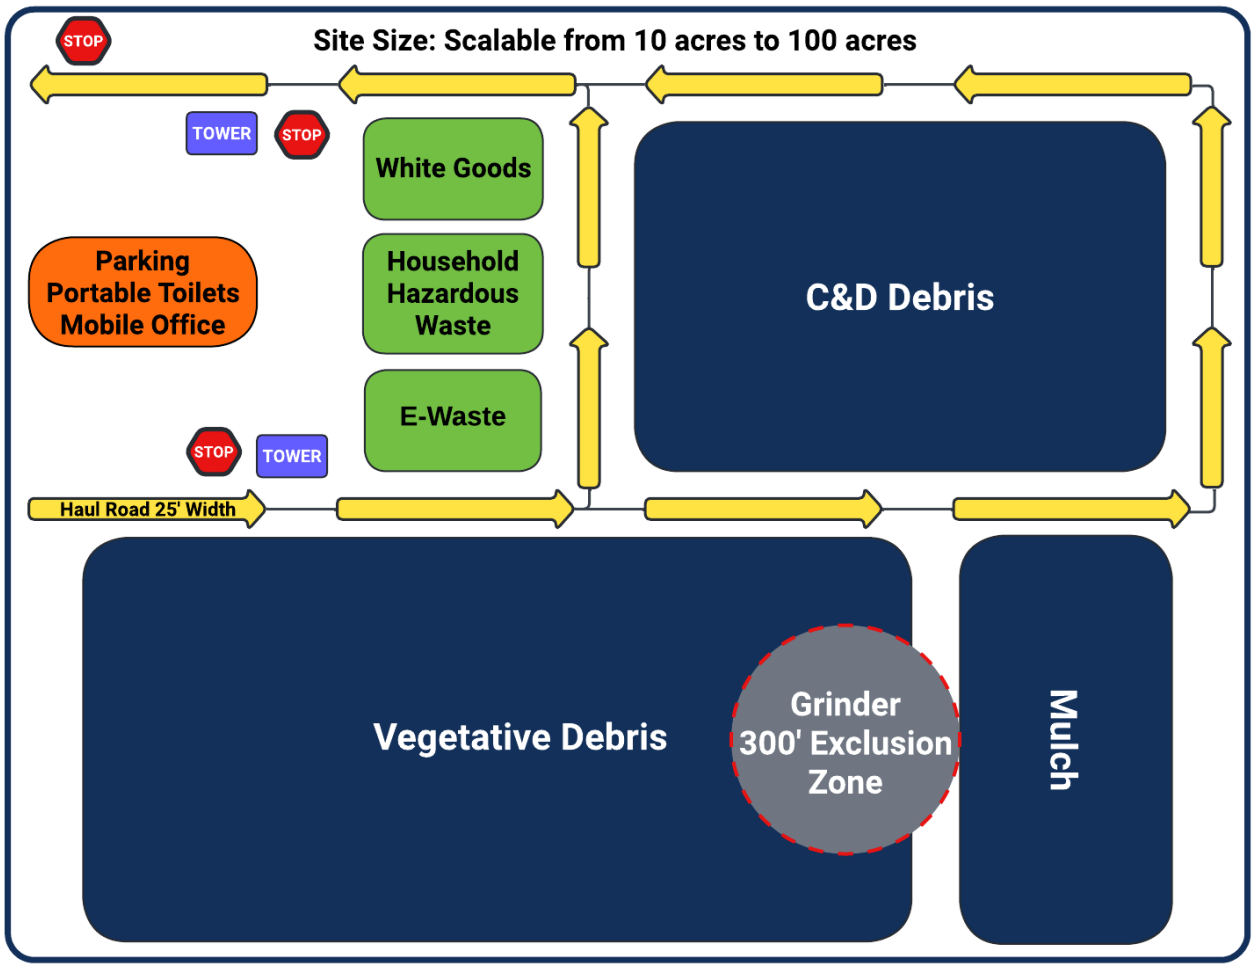
- Portable toilet facilities will be conveniently located to serve the inspection towers, crews working on the site, and office facilities
- Perimeter chain-link fencing, erosion and sediment control fencing, and other necessary drainage control methods
- Site traffic flow will provide for orderly movement of vehicles and equipment to avoid crossing traffic lanes with the construction of two entrances/exits with lockable gates
- At the request of the City of Destin, the DMS(s) may be restricted to City and Contractor vehicles only
- Safe and ready access to fire safety and rescue equipment will be provided to all functional sections of the site and to debris stockpiles
- A Safety Zone of at least 200' will be established around the grinder
- Air Curtain Incinerator (ACI) or Open burning safety zone will be established and will be 1,200' from any structure (other than inspection tower) and no less than 250' from any other pile or type of debris on site
- Ash storage pit will be adjacent to ACI units
- Compacted crushed rock and/or mulch will be used on ingress/egress road surfaces
- A designated personnel parking area for 30 vehicles will be established
- Space for two 12'x50' office trailers will be established
- Development of a lined Hazardous Materials Containment Area surrounded by a berm
- Two vegetative debris piles for grinding operations
- Sufficient area for chip piles to minimize pile height to prevent spontaneous combustion
- C&D debris area will be separate from other debris areas
- Adequate area maintained at each site for truck maneuverability and a stable level surface for equipment to complete the dumping process
- Sufficient area for crew to separate mixed debris, if needed
- Site orientation will provide for ACI operations and grinding operations to be located downwind from offices and inspection towers (i.e., prevailing winds will be considered when setting up site)
- If necessary, separate areas/sites for the public to use for dumping vegetative and C&D debris will be provided. Depending on the process prescribed for allowing this, a separate tower may be required to facilitate accounting for the material entering the public section. If off-site citizen collection areas are developed in accordance with the City's Debris Management Plan, CrowderGulf will remove debris from those sites on a regular basis as directed by the City's Project Manager.

DMS Site Plan

A DMS Plan will be prepared for a scale of 1" = 50'. The Task Order Specific Management and Operations Plan will be updated to include the Site Management Plans for all DMSs, and Disposal Sites operated by CrowderGulf. The DMS Plan will display such functions as:

- Access to the Site
- Site Preparation – clearing, erosion control, and grading
- Traffic Control
- Site Security, Safety and Segregation of debris storage areas
- Location of ash disposal area, hazardous material containment area, contractor work area, and inspection towers
- Location of incineration operations and chipping operations
- Location of existing structures or sensitive areas requiring protection
- Household Hazardous Waste (HHW) or Hazardous, Toxic and Radioactive Waste (HTRW) storage
- A detailed list of equipment
- Sanitation facilities

The general site plan shown will be modified to fit the needs of each specific DMS and will incorporate all specifications addressed in the FEMA Public Assistance Program and Policy Guide and all local, state and federal regulations and requirements.



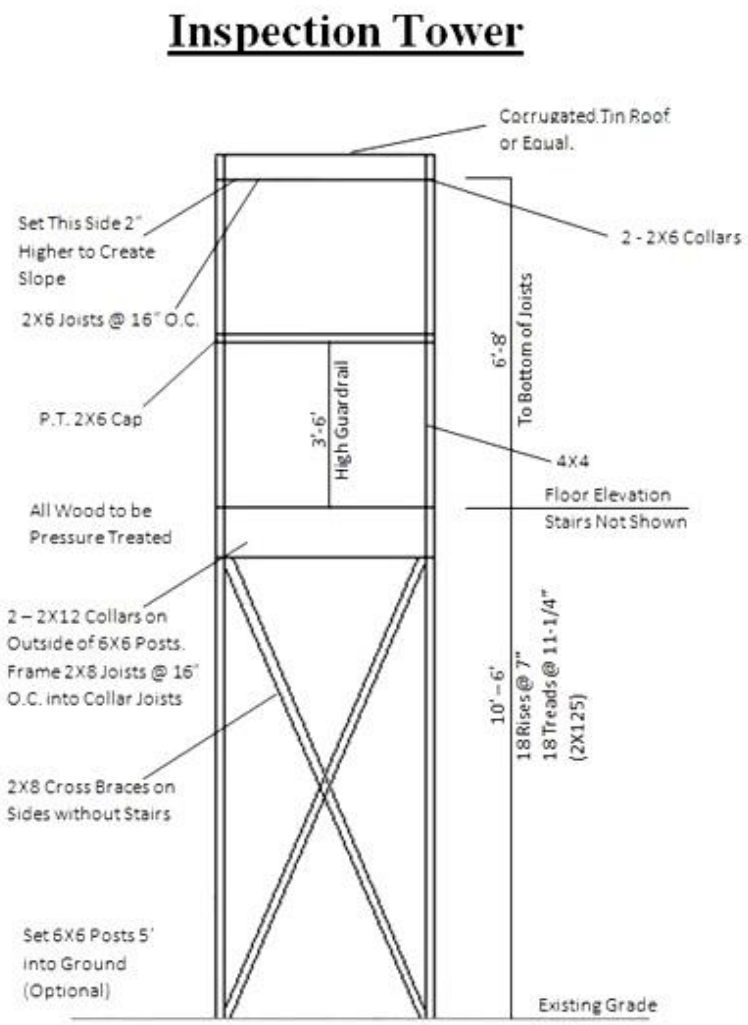
"I believe in giving credit where it's due. And that is given to the demo crew who worked there last Thursday and Friday. All the other houses demoed in my neighborhood had a messy lot left behind. There are always small pieces of debris that may fall out of the claw machine, broken bricks and masonry blocks from underneath. It's so predictable I thought that was normal and assumed mine would look the same. But mine was IMMACULATE! I couldn't stay to the end, so I don't know if they raked it or picked up debris by hand, but there was absolutely nothing there but the dirt. I was very impressed. The guys were very pleasant when I was taking some pictures of the progress. But the finished project was outstanding. Give them my thanks and appreciation."

Resident
Town of Fort Myers, FL (Hurricane Ian – 2022)

Inspection Towers

At no cost to the City, CrowderGulf will construct a minimum of one inspection tower at each site adjacent to the roadway. A minimum of one exit lane for all trucks to use will be visible from a tower. This allows for checking truck beds before exiting, ensuring that they are completely empty. The Inspection tower site location will provide a .25-mile approach outside the public road system to accommodate any truck back up.

- All towers will be OSHA and FEMA compliant. At a minimum, the towers will be constructed with pressure treated wood with the floor elevation of the tower 15' above the existing ground elevation; the floor area shall be 8'x 8', constructed of 2"x8" joists, 16" O.C. with ¾" plywood supported by four 6"x 8" posts.
- The perimeter of the floor area will be protected by a 4' high wall constructed of 2"x 4" studs and ½" plywood. The floor area will be covered by a corrugated tin roof.
- The roof shall provide a minimum of 6'8" of headroom below the support beams.
- Wooden steps will provide access with a handrail. In addition, the construction of towers will comply with all applicable City building codes.
- Inspection towers shall be capable of seating a minimum of three inspectors each.
- Towers will be removed at the completion of the project or when the site is no longer needed.

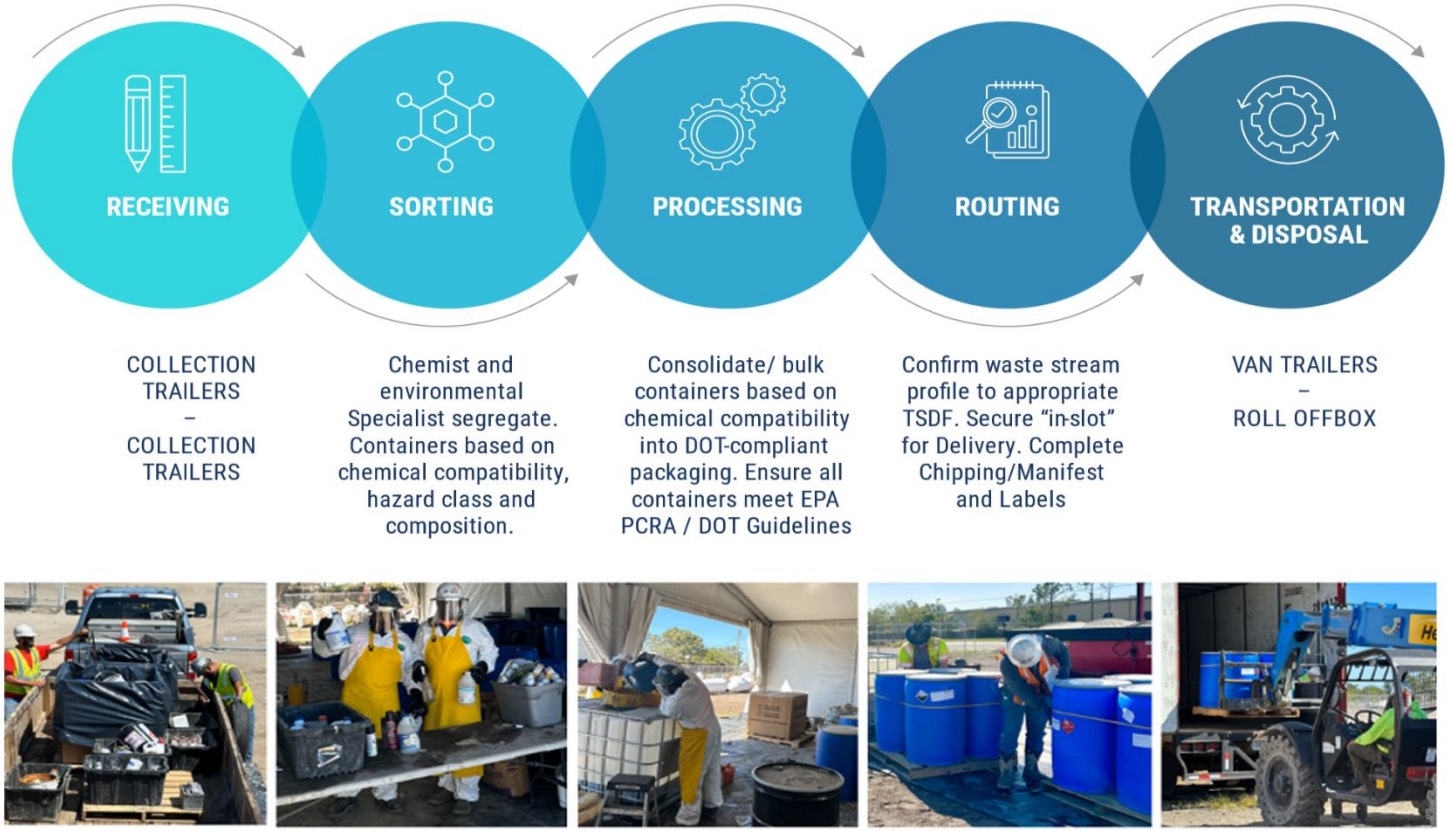


Hazardous Materials Containment Area

In accordance with FEMA Public Assistance and Program Policy Guide, CrowderGulf will construct an area designed for the temporary storage and confinement of hazardous material. Material deposited into this facility will be inventoried and stabilized. Any leaking containers will be placed in "over pack drums". A well-marked, defined and enforced NO SMOKING area will be established within 200 feet of this area.

Minimum Design Criteria for the Hazardous Materials Containment Area:

- 30'x 30' in size, the perimeter lined with hay bales stacked in place
- Waterproof liner or plastic ground protection cove
- Rain and snow cover for the entire area



Debris Separation and Reduction

Debris Separation

The Debris Reduction Manager will supervise the separation and segregation of all loads deposited at the DMS. If site segregation is required because of mixed loads, the separation will reflect the six categories cited below. Each of the following categories of debris will be managed in full compliance with the CrowderGulf Environmental Plan and local, state and federal standards:

- Clean, vegetative debris
- Vegetative debris containing other foreign matter
- Construction and Demolition (C&D) Debris
- Salvageable or recyclable debris
- White Goods, E-waste
- Household Hazardous Waste (HHW), Asbestos Containing Materials (ACM) and Toxic Materials/ waste

Vegetative debris will be placed into two or more piles (no more than 15' high) which will allow for volume reduction without interfering with the ongoing dumping operation or until the dumping and/or reduction operations are complete. As directed by the City's representative, all construction and demolition (C&D) debris will be hauled directly to a certified landfill or prepared for reduction or recycling if feasible. White goods will be degassed, crushed and bailed for sale as scrap metal.

Methods of Debris Reduction

There are two primary types of reduction methods – incineration and chipping/grinding. After all major storms, we have used both grinding and burning to reduce debris, however, grinding has become the more common method due to environmental issues with burning.

- **Chipping and Grinding**

The chipping and grinding of vegetative debris reduce the volume by 75%. Many times, clean chips will be recycled as bio-mass fuel. CrowderGulf is very experienced with chipping/grinding debris and has used this method in most of our disaster contracts for the past ten years. When grinding/chipping is utilized as the reduction method, all safety and compliance regulations are enforced throughout the operation.

- **Incineration**

There are several incineration methods available for volume reduction. These include uncontrolled open-air incineration, controlled open-air incineration, air curtain pit incineration, and portable air curtain incineration. Portable air curtain incineration is the most efficient incineration system available because the pre-manufactured pit is engineered to precise dimensions to complement the blower system. Any burning method used will only be conducted with concurrence from the City. Burning vegetative debris can produce up to a 95% reduction rate. In those situations where air curtain incineration may be approved by the City, all environmental compliance and safety concerns will be addressed within the site-specific plan. Setbacks and buffer zones will be established within and around the reduction sites not only for public safety but also for the safety of the debris operations.

A setback of at least 100' will be maintained between the debris piles and the incineration area. There will be a buffer of 1,000' between the incineration area and the nearest building to create a zone for emergency vehicles, if needed. The fire will be extinguished two hours before the anticipated removal of the ash mound. The ash mound will be removed before it reaches two feet below the lip of the incineration pit. To prevent explosions, hazardous or contaminated flammable material will not be placed in the pit. Finally, fencing and signage are simple and effective means to keep the public away from the incineration area.
